1. FS: Astatic D-104 Mic

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-01 00:00:00 UTC
From: Lamb <k7fm@teleport.com>
Message-ID: <GlJh5.6521$1V.591426@nntp1.onemain.com>
Source record: 63244

For Sale

Astatic D-104 mic. and ptt stand. A bit dirty, but the chrome is not tarnished.

No connector on coiled cord. Did not try it out as it is from my friend's estate. Bottom of baseplate is missing, so you will need to make your own.

$20 plus $8 shipping.

Colin K7FM near Portland, OR

2. National NCX-1000 TX and a RX problem: HELP!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-01 00:00:00 UTC
From: yardleyite@aol.com
Message-ID: <20000801195154.27087.00001350@ng-fc1.aol.com>
Source record: 63245

Name here is Joe (N3IBX) and I have a
National NCX-1000 that has a TX and a RX problem I can't figure out:

I has 400 watts of CW output on 20 meters, and sometimes output on 40 meters.
No ouptput on the other bands. The RX is working on all bands; but the
sensitivity seems low and the AGC is doing strange things.
When I first got the radio it lit up but had no output power or RX. After
attempting to align/check it out I was able to get to the aforementioned
palteau (if u want to call it that).

Would anyone have any experience with this radio that may be able to give me
and a friend (who is working on it) some advice? It's all early solid state
with the exception of the final and the driver. The circutry seems real
different to me since I'm not thoroughly versed in early transistor
technology. I have the full service manual with all of the updates.

Any advice will be greatly appreciated. Thanks for the bandwidth.
Joe Cro N3IBX

3. FS: Hardbound book - Transistor Projects

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-01 00:00:00 UTC
From: Lamb <k7fm@teleport.com>
Message-ID: <csJh5.7991$SM4.601076@nntp2.onemain.com>
Source record: 63246

For Sale:

Hardbound book by Louis Garner, Jr. 192 pages. Pretty good condition.

Copyright 1966 Gernsback Library, Inc.

Numerous fun projects and troubleshooting info. Solar powered receivers, code oscillator, metronome, audio amplifier, superhet, inverter and others. Covers how to make your own circuit board.

For you old tube guys, this is just the thing to get up to the speed of the 60's. Transistors may be here to stay, and they may even replace tubes.

Just $10 plus $3.20 shipping and handling priority mail

Your response surprises me a bit. I have one of thes eset up next to a 539C. I do noise testing and matching on the 539C (I match adding a plate current meter). However, except for these two things, the cardmatic saves one from turning the roll chart, checking for shorts, setting the line and grid voltages, and making the setups for the tube while giving the same information as the 539C.

Do not confuse automation with a lack of features.

Please accept my apologies if this was an inappropriate post for any of these four groups. I didn't have much luck in locating the charters for any of them, and a quick poke around yield similar notices, so I hope this is an OK post.

I've listed one of my cardmatics on ebay. This is not only the best Hickok tester, this is one of the best condition sets that you will likely see for sale.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=398109237

Feel free to ask me any questions about this unit (or cardmatics in general) via email.

Thanks,

--

Hi folks,

I just bought a Heath SB-200 amp that's been sitting a while,
and I'm planning to rebuild the power supply. I recall that
many years ago there was a magazine article published in one
of the ham journals on rebuilding and upgrading the SB-200's
power supply. Does anyone have that information? I would
appreciate a copy, or at least knowing where to look. I'll
try the ARRL web site and see if there is a reference to it
(maybe it was a QST article).

> Looking for a copy of an article from QST magazine, April 1965,
>

Two easy ways to get this:

Contact the ARRL Technical Information Service (tis@arrl.org).
They will provide a copy for a small charge (I think it is
$3 for members, $5 for non-members.)

Contact your local public library or school library. If they
don't have QST back that far, they can get it through the
interlibrary loan service. There may be a small charge for
photocopying and postage, or it may be free (my college does
not charge for this at all.)

Definitely the best HicKok tester. It was too costly and complex for some,
but it is one of the best testers ever made.

I'll definitely agree with "one of the best" but not "the
best." A 300 V regulated supply is a great idea.
Unfortunately, the tester is so limited in features, like being
able to analyze a tube beyond shorts and Gm, that it's like '67
Corvette with a 427, but only one gear. There's enough ways to
work around that, if one has the enginuity.

From: Chris
Subject: Collins 212Z-1 Remote Amplifier for sale $375

I have in good condition a Collins 212Z-1 Remote Amplifier. This is a
solid state, 4 Channel AC or Battery operated portable in a case used
for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These
are excellent for AM Transmitters requiring line level audio input.
Built in 400Hz tone for setups and program monitor for headphones. All
XLR inputs and also telephone connections. With a really large VU Meter
in the center makes it a great addition to any station. $375 plus
shipping.

From: dslosty@pipeline.com (dslosty)
Subject: FS: ATLAS 350XL transceiver

Fore sale, an Atlas 350XL transceiver in very good to excellent
condition. Cosmetically it's around a 9 out of 10. The only
imperfections are some small scuff marks on the front panel trim ring.
Front panel is perfect and the case is almost perfect.
I've gone thru the rig and have done some minor repairs and
an alignment.

It has the digital readout, CW filter, full QSK, 350 watts PEP input
power with a maximum of 160 - 200 watts output. Requires a 35 amp
12 volts supply since maximum key down current is 32 amps.
A suppl;y is not included. It comes with a W7FG manual copy.
$350 plus shipping.

73,
Doug/WA1TUT

Subject: SOS DE www.hallicrafters.org

The Hallicrafters Collectors Association maintains a terrific website
at www.hallicrafters.org.
Sadly we are at risk of losing this website by September unless they
are able to raise $400 by then.
If you have enjoyed this excellent website and all it offers, please
send whatever size donation you can to:

Hallicrafters Collectors Association
c/o Brad Stone
7382 W. 500 S.
Morgantown, IN 46160

In addition to my personal donation, I plan to auction some of my
Hallicrafters equipments off on eBay with proceeds going to HCA. Please look
for "HCA Hallicrafters ____" in the key words of the eBay search engine. If
you have extra stuff or duplicates lying around, help in this manner will
insure that we do not lose www.hallicrafters.org.

Thanks.

35. FRAUD ALERT [UPDATE] Dale Kight NH6VR

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-01 00:00:00 UTC
From: Mike Fallon <fallon@ix.netcom.com>
Message-ID: <39871FA6.9DDFEE78@ix.netcom.com>
Source record: 63382
Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.vhf-uhf,alt.radio.scanner,rec.radio.amateur.boatanchors,rec.radio.swap

<This is the initial fraud alert of 7/13/00. Update follows>

This individual has posted to this newsgroup.

He posted Clegg equipment for sale on 5/9/00 on rec.radio.amateur.boatanchors. I negotiated price and shipping with him by email. I sent a cashier's check which was cashed on 5/16/00. Then the delays started: Illness, phone problems, etc., etc. Two weeks ago communications stopped. He is currently posting in other venues, so his health is OK. Watch out for this guy.

He has several email addresses:

nh6vrdale@aol.com
nh6vr@yahoo.com
dale@kight.com

I will immediately post if anything changes. I will repeat this post from time to time if nothing changes.

Comments, information, questions -- contact me by email.

Mike Fallon

<Update 8/1/2000>

I have received no money, goods or communication from Mr. Kight since I posted the above alert. I have notified police/DA in my area (Spokane County, WA) and his (Maui County, HI). Mail Fraud reports have been filed. His ISP's have been notified.

Watch out for this guy. Take a look at his EBAY feedback rating. His user ID is "drkight". He has a web site at www.dale.kight.com. It contains his own auction as well as some multi-level marketing (e.g. pyramid) schemes. My advice is to look but don't touch. I wish I had found this stuff before I sent the money. There is a lesson there, folks.

If anyone has any further ideas on how to keep the pressure on this thief, let me know.

Regards,

Mike Fallon

Has anyone a collection of 0.5 Watt to 2 Watt carbon film
or metal film resistors they no longer need?
I build valve (tube) circuits, and need this power range
of resistors.
I am after quantities of as many values as possible.
A full range of E12 values would be nice.
Can anyone help?
Please reply soon.
Willing to pay.

Hi,
Matt replied:

>Unfortunately, the tester is so limited in features, like being
>able to analyze a tube beyond shorts and Gm, that it's like '67
>Corvette with a 427, but only one gear.

I would say it's like a '67 Corvette with a 427, driven by a chauffeur. It will give a definitive answer to whether the tube is good or bad, but you have no say in how it works.

I've played with dozens of tube testers, but the two that I keep set up for regular use, are a KS-15874 (essentially a 1234) and a TV-7.

73, Alan

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

Source record: 63256

I just picked up a semi-basket case Henry Amp. The more I checked it out, the more I liked it. Nice Pi-L output. Built rather well. Think I might resurrect it. I need info/jpg's/schematic/etc. I just have the RF deck, but I'd rather have that than just the power supply! It's in fine condition. There have been some minor mods that I will have to weed out.

I've seen some info on the net on the 2K but not the 2KD-3. I'd like to evaluate it before spending bucks on a manual, etc. (its not listed in the usual places). I think I'm missing the bottom cover of the tube compartment. The tubes and chimneys are missing but I think the rest is there. I think it was a floor console but that's part of the help I need.

73 es tnx,

Bill Abate, K3PGB

I'm looking for documentation regarding the British Larkspur era RF amplifiers No9 and No10 that where used with the C11 and C42 radio installations. They where build by Mullard and also known under the factory number Mullard SL65 and SL24.
Any information is welcome.

I'm also interested to buy ore swap the amplifiers them self should someone have one available. I have a German SEG-15 2-12 MHz Manpack made in 1982 complete with all bits and pieces available.

Boy, not even close!

The Cardmatic is one of the most accurate and flexible testers ever designed, you just have to know how to use it! It is a lab quality tester not designed for the TV guy! The cards give you speed and repeatability. If you know what you are doing you can punch a card with any parameters you want. Truly a masterpiece of tube technology.

Subject: =AD: Prep for HAM/FCC tests (yes, new tests too!). Download today!= .

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

From: Bill Abate
Subject: Henry 2K-3 info needed

I just picked up a semi-basket case Henry Amp. The more I checked it out, the more I liked it. Nice Pi-L output. Built rather well. Think I might resurrect it. I need info/jpg's/schematic/etc. I just have the RF deck, but I'd rather have that than just the power supply! It's in fine condition. There have been some minor mods that I will have to weed out.

I've seen some info on the net on the 2K but not the 2KD-3. I'd like to evaluate it before spending bucks on a manual, etc. (its not listed in the usual places). I think I'm missing the bottom cover of the tube compartment. The tubes and chimneys are missing but I think the rest is there. I think it was a floor console but that's part of the help I need.

73 es tnx,

Bill Abate, K3PGB

Subject: must sell off tube collection over 5000 tubes

Thanks for the look,
Unfortunatly due to a bad divorce I have to sell off my 18 year tube collection for much needed cash. My lists are not close to complete so posting them would cause problems. I do have as follows.

A great supply of vintage new old stock from the 1930's forward
nice selection of JAN and Military types
About two dozed european(amperex, mullard, telefunken
Over 2000 tested guarenteed used in all shapes and numbers
Nice selection of globe shaped too!

Send your wants and I will reply as soon as possible

Thanks
Rich

From: yardleyite@aol.com (Yardleyite)
Subject: National NCX-1000 TX and a RX problem: HELP!!!

Name here is Joe (N3IBX) and I have a
National NCX-1000 that has a TX and a RX problem I can't figure out:

I has 400 watts of CW output on 20 meters, and sometimes output on 40 meters. No ouptput on the other bands. The RX is working on all bands; but the sensitivity seems low and the AGC is doing strange things.
When I first got the radio it lit up but had no output power or RX. After attempting to align/check it out I was able to get to the aforementioned palteau (if u want to call it that).

Would anyone have any experience with this radio that may be able to give me and a friend (who is working on it) some advice? It's all early solid state with the exception of the final and the driver. The circutry seems real different to me since I'm not thoroughly versed in early transistor technology. I have the full service manual with all of the updates.

Any advice will be greatly appreciated. Thanks for the bandwidth.

From: speedskater1@my-deja.com
Subject: Collector sells his only S-27 on ebay

The ad reads as follows: I have been collecting communications receivers for a very long time and have yet to find a Hallicrafters S-27...until now... It came out of a silent keys hamshack over the weekend from Phil Pa. I have not fired it up but appears to be in electronically working condition. I will of course stand behind it if anything serious is wrong. I hope it will find a good home in a hallicrafters collection. The number is 389918571.

It does appear to be complete in the photos. Why would a collector who has only seen one of an item buy it and then immediately sell it? To me, this sounds strange. A collector would normally keep something that is so rare and he only has one, the only one he has ever seen. I am curious to know if there is more to this than meets the eye.

Subject: Collector sells his only S-27 on ebay

My humble opinion...for what it's worth if you don't mind. Yup, the wording does seem kind of questionable. First, making money legally is a great thing. Even more great, is the ability to say no. There is a lot of stir about eBay. What bothers me is that I feel that I have done well there. I have purchased many items that I felt like were the best deal that I could find...granted, most were not boat anchors. However, my latest acquisition was a T-4XC for just over $200...not too bad. Last year, a late KWM-2A (36xxx) for just over $700...working FB! The

worst theives, roughs, liers and con artists are in Washington. I hope and pray that we (including myself) use all that energy to get the working mans taxes reduced...because we are not allowed to say no to them! 73, JP

Subject: TEMPO 2020 HF Transceiver $225

Hi Mike and group,
Interesting to hear that it was sold by Lowe under a different name,
I don't know if Yeasu had anything to do with it but here it was sold
mostly through Henry Radio and made by Uniden. It carried the name
Tempo Via Henry just as the Tempo One did which was really a Yaesu
FT-200 under the Tempo sticker. However the 2020 was a completely
different radio. In that era it seems to me that the front panel
layouts between Kenwood and Yaesu were very similar. If the marketing
worked, why not? Icom and Drake where very different.

From: Marvin Born <mborn@wbns.com>
Subject: Value of Collins Hand Mic?

Regarding the MM-1 $100 to $150 is the going price in Ohio. The $150 depends on how bad the guy wants it and it being in perfect condition. That will give you the idea. If you are selling ask $150. If you are buying offer $100 and work it out from there.

Hi

I'm interested in ordering a manual from Harris for my RF-550 radio, but the minimum order is $250, and the manual I need is $137.50.

If anyone out there needs anything from them, perhaps we could pool together to meet the minimum order requirement.

Hi,

>The Cardmatic is one of the most accurate and flexible testers ever
>designed, you just have to know how to use it! It is a lab quality tester
>not designed for the TV guy! The cards give you speed and repeatability. If
>you know what you are doing you can punch a card with any parameters you
>want. Truly a masterpiece of tube technology.

Just for the record: I have five or six Cardmatics, including the
USM-118B, the KS-15874, and I restored a 1234. I have the
card-punching data, and I have punched about four dozen cards. It's
not something one would do casually, just to test one tube.

Someone mentioned calibration: it's true that there is a
"calibration cell" and a deck of cards (three decks, actually,
depending on the model). But they are of very limited use, since they
will not test the one thing that is most likely to go wrong, the
card-reader itself.

Cheers, Alan

Just as you would any tube type radio...or transistor radio...connect 12vdc to it and turn it on...the vibrator should hum the tubes should light (except the rectifier which will probably be a 0Z4 gas full wave unit). From then on out service as any other radio...check voltages (plate etc.) You should try to get a manual for it, try contacting Wbelsito@aol.com and see if he has one. Hope that gets ya started.

I don't know what you mean by "discontinued so quickly", they were in
production from the mid '60s to the early '80s. If you add the 123's to
that, the cardmatic line runs from the mid '50s.

I'll refine my assertion to "It's the best tester Hickok made.", and I'll
leave it up to the user to determine if it's the best tester for them.

Well... it was really not meant to just test one tube. Someone who needs to
just test one tube doesn't really need a tube tester. Since you have the
testers and the data you should know all the different things that can be
tested with the Cardmatic. Much more than just Gm. Tubes like the WE 417A
have 4 cards IIRC. Once you punch the card you have it forever, you never
have to reset the tester again.

There are a lot of the 7 and 9 pin minature tubes that cannot be tested with this tester unless you have the MX-949/U Socket Adapter unit which is very hard to find.

Good one!

Actually, I would pull all the tubes out (and mark thier locations) before I would put the power to it.

This is because the filter caps might need to be replaced. The radio probably sat inside the dash fer a long time. Probably got to 150F to 170F in the sun and in a few years those electrolytics filter caps dry out.

Then measure the voltages. If you have a scope - you can look at the ouput voltages and see if there is any hum. But if I were you - I would replace them anyway just to be safe. If they haven't failed yet, there are due.

As for the voltages - most likely - if you find a bunch of 6XXX tubes then it's a 6 V radio - if a bunch of 12XXXX then it's a 12 Volt. (if you find a mixture - 98% time it's a 12 volter)

Also be aware - some cars used a Positive Ground!

Post to:

rec.antiques.radio+phono

and see what they have to say. Be positively sure before you apply the juice! Once you fry something - you'll find it's easier to find parts for the car than it is for the radio.

Good Luck. -B

Greetings all!

Last weekend I was given an old (and I do mean -old-) 6-meter "squalo." I believe it was made by Cushcraft back in the early 1960's, maybe late 1950's.

It appears to be "compleat." Well, using the M2 6-meter loop as an example, there may have been a support running from the center of the loop to near the feed point. I need an builder's guide/ operating instructions to be certain. Cushcraft didn't have it. Neither W7FG nor Sarrio had it.

Anybody got one? I'll graciously repay the person for the xeroxing and the mailing.

Thanks in advance.
Greg, K3ANG

I'm not going to have time to enjoy these boatanchors for years, and I don't have space to work on them or display them properly either. All the Hallicrafters and Hammarlund boat anchors come with schematics / owner's manuals. Most are copies and a few are original.

I'm not setting hard prices, instead I'm asking for offers.

You can see these radios and some info I collected about them on my site at http://markvan.virtualave.net

Hallicrafters S-85
Hallicrafters SX-110
Hammarlund HQ-170
National NC-98
Packard Bell 501
Zenith 6-D-015Z
Radio Shack DX-394
Radio Shack Pro-508
Panasonic RF-1010 portable
Philco 46-350's (two available)
Arvin mystery radio (no idea what model)

If you are interested please email me with an offer.
They are already boxed and ready to go. I am in 91601 zip code, in North Hollywood CA. My main email is mavn@www.com.

Sent via Deja.com http://www.deja.com/
Before you buy.

I got my Rf-550 from Radio Esoterica for $695 + Shipping.

I realize it's not for everyone, but it offers a lot of bang for the buck.

It's a 45 pound, 4 space rack mount radio. I think the Osterman book said Uncle Sam paid $13,000 each for them in the late 70's and early 80's.

It's rated at .15mv and has 100db of image rejection. The sync detector will lock onto Radio Pyongyang even when the audio is too weak to hear. It has a coherent AGC setting that reads through a 500hz filter even when you listen at 6khz, so it doesn't get as confused by things like distant lightning strikes.

Radio Tirana sounds like they're in the next town instead of Albania. (BTW, they've recently had music suited to torturing unwelcome guests between 2:30 and 2:58utc.) I seem to be able to tweak just about any signal I find to sound pretty good.

The down side is it has no memories, and the tuning uses up/down carry/borrow toggles for each digit, and to eke the most out of it, you should fine tune the vfo before turning on the sync. But once you get used to it, it only takes a few seconds to switch between any two known frequencies.

If you're familiar with cameras, this is kind of like using an Alpa.

Originally, I intended to keep my R8 for everyday use, and just use the Harris when I was chasing DX, but frankly, the only time I've used the R8 since this arrived was when I went camping. (Compared to the Harris, the R8 is quite portable.)

Here's a URL if you'd like to read more:

http://www.radioesoterica.com/cgi-bin/store/commerce.cgi?product=12

I have no connection with them, other than I bought a radio. There are a few quirks with buying from them, but I think it's because they're a new expansion of an existing business. It took a couple weeks from the day I ordered it until it was shipped, but they were in touch with me regularly, and it was obvious they were using the time to make sure I'd get a radio I'd be happy with. I get the impression the owner (and possibly the only employee) is a european gentleman. (and I stress Gentleman.)

Anyway, if you're the type who doesn't mind, or even enjoys tweaking settings to get incredible reception, this is a fun radio.

By the way, John Reed who sometimes posts here was a valuable source of helpful tips and advice on this radio. Thanks John. :)

National 2.5 volt Model II version of the famous SW-3 receiver from the 1930's in excellent cosmetic and electrical condition. No dents, dings, mods, etc. The tubes in this radio are 27, 57, 58 (I have a picture available). It comes with a homebrew power supply, 2 sets of original NC coils and a pair of Brandes headphones from about 1925. A copy of the July 1971 CQ Magazine article by Bill Orr, W6SAI, with a schematic and other interesting data is included. $395 plus s & h from Schenectady, NY.

re the "yikes" on the 137 for a manual...LOL....Harris radio gear is / was big bucks....used to install / use and maintain some of it - low end HF transceiver would be about 12000 back about 12-14 years ago (Canadian I think which was on par then). Accessories would scare ya as a ham. The manual, however.....ANY manual from Harris (that I've seen - quite a lot) would be a top notch piece of writing.....well written, accurate, not likely ambiguous and a virtual course in the item under discussion. Often they had (my experience was mostly 80's and early 90's vintage) detailed data sheets on various discrete components in the back....As a sparker at sea it was a joy to have on the shelf - and as an installation tech an invaluable asset - no guessing on connectors or numbering conventions (Ken/Yae/Ico take heed!)

From: mark_van_nordstrand@my-deja.com
Subject: Collection for sale

I'm not going to have time to enjoy these boatanchors for years, and I
don't have space to work on them or display them properly either. All
the Hallicrafters and Hammarlund boat anchors come with schematics /
owner's manuals. Most are copies and a few are original.

I'm not setting hard prices, instead I'm asking for offers.

You can see these radios and some info I collected about them on my
site at http://markvan.virtualave.net

Hallicrafters S-85
Hallicrafters SX-110
Hammarlund HQ-170
National NC-98
Packard Bell 501
Zenith 6-D-015Z
Radio Shack DX-394
Radio Shack Pro-508
Panasonic RF-1010 portable
Philco 46-350's (two available)
Arvin mystery radio (no idea what model)

If you are interested please email me with an offer.
They are already boxed and ready to go. I am in 91601 zip code, in

North Hollywood CA. My main email is mavn@www.com.

There are a lot of the 7 and 9 pin minature tubes that cannot be tested
with this tester unless you have the MX-949/U Socket Adapter unit which
is very hard to find.

From: "Mark S. Holden"
Subject: Harris rf-550 mini review.

I got my Rf-550 from Radio Esoterica for $695 + Shipping.

I realize it's not for everyone, but it offers a lot of bang for the buck.

It's a 45 pound, 4 space rack mount radio. I think the Osterman book said Uncle Sam paid $13,000 each for them in the late 70's and early 80's.

It's rated at .15mv and has 100db of image rejection. The sync detector will lock onto Radio Pyongyang even when the audio is too weak to hear. It has a coherent AGC setting that reads through a 500hz filter even when you listen at 6khz, so it doesn't get as confused by things like distant lightning strikes.

Radio Tirana sounds like they're in the next town instead of Albania. (BTW, they've recently had music suited to torturing unwelcome guests between 2:30 and 2:58utc.) I seem to be able to tweak just about any signal I find to sound pretty good.

The down side is it has no memories, and the tuning uses up/down carry/borrow toggles for each digit, and to eke the most out of it, you should fine tune the vfo before turning on the sync. But once you get used to it, it only takes a few seconds to switch between any two known frequencies.

If you're familiar with cameras, this is kind of like using an Alpa.

Originally, I intended to keep my R8 for everyday use, and just use the Harris when I was chasing DX, but frankly, the only time I've used the R8 since this arrived was when I went camping. (Compared to the Harris, the R8 is quite portable.)

Here's a URL if you'd like to read more:

http://www.radioesoterica.com/cgi-bin/store/commerce.cgi?product=12

I have no connection with them, other than I bought a radio. There are a few quirks with buying from them, but I think it's because they're a new expansion of an existing business. It took a couple weeks from the day I ordered it until it was shipped, but they were in touch with me regularly, and it was obvious they were using the time to make sure I'd get a radio I'd be happy with. I get the impression the owner (and possibly the only employee) is a european gentleman. (and I stress Gentleman.)

Anyway, if you're the type who doesn't mind, or even enjoys tweaking settings to get incredible reception, this is a fun radio.

By the way, John Reed who sometimes posts here was a valuable source of helpful tips and advice on this radio. Thanks John. :)

Subject: Maybe the braintrust can help.

Greetings all!

Last weekend I was given an old (and I do mean -old-) 6-meter "squalo." I believe it was made by Cushcraft back in the early 1960's, maybe late 1950's.

It appears to be "compleat." Well, using the M2 6-meter loop as an example, there may have been a support running from the center of the loop to near the feed point. I need an builder's guide/ operating instructions to be certain. Cushcraft didn't have it. Neither W7FG nor Sarrio had it.

Anybody got one? I'll graciously repay the person for the xeroxing and the mailing.

Thanks in advance.

Just as you would any tube type radio...or transistor radio...connect 12vdc
to it and turn it on...the vibrator should hum the tubes should light
(except the rectifier which will probably be a 0Z4 gas full wave unit). From
then on out service as any other radio...check voltages (plate etc.) You
should try to get a manual for it, try contacting Wbelsito@aol.com and see
if he has one. Hope that gets ya started.

From: "Bubba"
Subject: Off the subject, but.

Good one!

Actually, I would pull all the tubes out (and mark thier locations) before I would put the power to it.

This is because the filter caps might need to be replaced. The radio probably sat inside the dash fer a long time. Probably got to 150F to 170F in the sun and in a few years those electrolytics filter caps dry out.

Then measure the voltages. If you have a scope - you can look at the ouput voltages and see if there is any hum. But if I were you - I would replace them anyway just to be safe. If they haven't failed yet, there are due.

As for the voltages - most likely - if you find a bunch of 6XXX tubes then it's a 6 V radio - if a bunch of 12XXXX then it's a 12 Volt. (if you find a mixture - 98% time it's a 12 volter)

Also be aware - some cars used a Positive Ground!

Post to:

rec.antiques.radio+phono

and see what they have to say. Be positively sure before you apply the juice! Once you fry something - you'll find it's easier to find parts for the car than it is for the radio.

Good Luck. -B

Subject: ARRL manual help wanted

Also have a copy of the 58th & 59th edition for 1981 & 1982 ARRL Handbooks.
I also found the 1993 edition among my newest addition to the handbook
collection.

If anyone has a copy of the 1981 or 1982 handbook and know what rig that is
in the center of the picture, please let me know.. a friend is looking for
one.

Also looking for suppliers of the following:
Please also list known equivalent:

3-500Z
1N4004 or equiv
Phillips ECG #288
1N4001 or equiv
Hammond #119487
1N4007 or equiv
2N2222 or equiv
2N2222A or equiv

for all the semiconductors and diodes on your list go to:
http://www.xs4all.nl/~barendh/Indexeng.htm
a really excellent site for RF devices.

For Valves try
http://www.colomor.demon.co.uk
they appear to have most of the valves you want

or email to
wilsonvalves@surflink.co.uk
not sure of their stock though

From: john williams
Subject: CLEANING old gear safely?

Group,

Thanks for reading.

I have a bunch of vintage tube gear to clean. Both exposed control panels and chassis decks, (with silk screen lettering). Good shape, just cigarette tar and dust. What is good for that? Ammonia too harsh?

Then I have some real oxidized rig decks including some rust. Anything for that? What chemicals should I stay away from. This is valuable working equipment.

Thanks for any advice or leads to resources.
John ac6ts

Subject: Collector sells his only S-27 on ebay

I ignore the terms

RARE
COLLECTORS GRADE
HARD TO FIND
ONE OF A KIND

or something similar.

I decide what I need or want to buy. Research what it is worth and what it is selling for. I set my maxinum price, if it exceeds my maxinum price, I don't bid. If it does not exceed my maxinum price, I will bid on it and see if I win.

Gotton some fair deal, nothing great. I perfer off the news groups. Sold a few items on the news groups also but I sold some old Heathkit manuals on E-Bay because I thought there was a larger audance that might be looking for them. I was sure someone who needed or wanted them would buy them verses throwing them in the trash.

Subject: Collector sells his only S-27 on ebay

At the very least, it appears to be a deceptive ad from the
perspective of the seller's story.

If he/she is a Hallicrafter's collector and it was truly as rare as
claimed, they'd keep it. If money was an issue, they'd sell items
from their collection which were more readily replaceable in the
future.

"I have not fired it up but appears to be in electronically working
condition"

Horse puckey! How can he comment on it's working condition without
applying power?

Also, I don't know anyone in radios that would describe something as
"electronically" working.

counts on quantity purchases. Shipping
weights are estimates - you pay only actual shipping charges.

Modulation Transformer

Thordarson 7994 plate-and-screen modulation transformer. This is an upright transformer of the pre-WW2 Thordarson style. Looks like it could easily handle 50 watts of audio. I have NO information on this transformer - any and all help appreciated! In fair-to-good condition. Asking $5 (8 lbs.)

Power Transformers (all have 117 V 50-60 Hz primary)

UTC H-196 power transformer. Upright, hermetically sealed mounting style with ceramic insulated lugs on the bottom for connections. Meets MIL-T-27A. This transformer has two ratings. Military Rating: HV: 230/285VCT @ 445/380 mA HV, 6.3V @ 5 A heater #1, 6.3 V @ 1.5 A heater #2. Industrial rating: HV: 230/285VCT @ 480/420 mA HV, 6.3V @ 6 A heater #1, 6.3 V @ 2 A heater #2. NOS, in the original box, absolutely MINT condition, a beautiful mil-spec unit. Will test if desired. Price $25 (12 lbs.)

Stancor PC-8417 power transformers (Have 2). Upright mounting style (no big chassis hole to cut). Secondaries: 440 VCT @ 50 mA HV, 25.2 V @ 0.5 A heater #1, 6.3 V @ 0.6 A heater #2. Mounting centers 2 X 1-9/16 inches. NOS, in the original boxes, absolutely MINT condition. Will test if desired. What makes these transformers special is that they are just right for building a power supply for an unmodified "Command set" (ARC-5/SCR-274N) receiver. Heater winding #1 is just right for the heaters of an unmodified Command set receiver, and heater winding #2 is just right for a 6X5 or 6X4 rectifier. Using one of those rectifier tubes and a capacitor input filter, the DC output voltage should be about 220 volts at 50 mA. Of course they can be used for other purposes, but the ratings are a perfect match for a Command set receiver. Price $12 each or both for $20. (4 lbs. each) Will include 6X4 or 6X5 rectifier tube and socket (your choice, no charge) if you need them..

UTC R-7 power transformer. Horizontal, "hole in the chassis" style with terminals. Secondaries: 700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 3 A rectifier filament, 2.5 V @ 8 A heater #1, 6.3/2.5 VCT @ 2A heater #2 (tapped so both voltages can be used). Used, dusty and a paint is scratched up, fair-to-good condition. Tested, works. Price $4 (5 lbs.)

Filament Transformers (all have 117 V 50-60 Hz primary)

Thordarson 6421 rectifier filament transformer. Antique upright style (from 1930s) with solder lugs for connection. Two independent secondaries: 5 V@ 3 A, 2.5 V @ 10.5 A. Used, tested, works, good condition. Price $3 (4 lbs.)

Variable Transformers

Superior Electric "Powerstat" variable autotransformer (similar to a Variac). Model 116-U. Input is 115V, output can be connected for 0-115V or 0-135V, continuously variable. Rated 7.5 A output. Open type, panel mounting with 3/8" shaft, no scale provided. Can be connected for CW or CCW rotation, instructions on terminal board cover. Used, tested, works, good condition. Price $25 (10 lbs.)

Meters

Meter from military I-166 multimeter. Round black bakelite case, white face with scales. 0-100 uA movement. Labeled "calibrated for use in steel panels". Price $5 (1 lb)

Tubes

NOS tubes in original boxes. All are $2 each or 6 for $10. Manufacturer in parenthesis, Quantity in brackets:

6AG7 (RCA) [3] (In special military long-term packing)
6AU5GT (Sylvania) [5]
6BL7GTA (GE) [1]
6SA7GT (RCA) [1] (in plain military box)
6SQ7GT (Raytheon) [6]
6V6Y (RCA) [1] (Metal tube with low-loss micanol base for RF use)
6080 (RCA) [1]

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for antique-style power supply on wooden chassis. Rated 10 A @ 250 V. Round white ceramic base with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the base. 2-1/2" round, DPST with double-break contacts. NOS, excellent condition. Price $2 (1 lb).

Octal Wafer Sockets - Brown phenolic. Have 9 NOS, VGC, 1-5/16 mounting centers, 25 cents each. Also 3 used, GC, 1-1/2" mouning centers, one with pin 6 missing, 10 cents each or free with any order. $2 for all 12. (1 lb.)

160 Meter Wave Trap - J.W.Miller Type 811-A. This is a parallel tuned circuit consisting of a pi-wound inductor that is mounted on a mica compression trimmer. Put in antenna lead of AM radio to eliminate BCI from nearby ham stations. NOS in original box. 25 cents (1 lb)

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA. Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3. Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown bakelite case with meter. Old, beat up, cracked and glued case, some parts missing - a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good. Price 10 cents or free with any order. (2 lbs)

Code Practice Oscillator Module. CPO-4 made by Carl Conover & Co. Mineola, NY. Classic unit from the early '60s - "All American Made!" Consists of a small circuit board with two transistors, one resistor and one capacitor, to be hooked up to a soeaker, key and 1-1/2 volt battery. NOS, still in original plastic bag. Looks like something you'd find at Lafayette Radio in 1962. Price 10 cents or free with any order. (1 lb)

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

From: "Bob"
Subject: FS: ARC Corp R-19 VHF Command Set

For Sale: Aircraft Radio Corp. R-19 VHF AM receiver approximately 120 Mhz to 148 Mhz AM. In a command set form factor, but no dial on the front. Complete with all covers, no dents or cruds, or modifications of any kind. All tubes and DY-86 Dynamotor (28Volt Commmand receiver style). Includes Full Sized schematic print set. Built like a Rolex Watch, but definately a dated design. Gray Wrinkle Finish. I have a few of these with dynamotors and a another batch W/O dynamotors. $45 with dynamotor plus UPS on 15 lbs from zip 95827. $35 less dynamotor plus UPS on 12 lbs from zip 95827. These are complete as noted, but no warranty as to operation is conveyed due to age. A great addition to any command set collection.

tnx for the read.

From: Larry Anderson
Subject: FS or FS+ trade QRO HF-2500 Amplifier

Original owner. QRO HF-2500DX QSK amp with less than 50 hour op time.
New $2895, sell for $2200 or trade for Heath SB-220 and $1500 cash.
SB-220 must be in very good condition both operational and cosmetically.

The QRO is grid driven and takes very little drive for full output. 50W
input on 75M will drive to 1500W out. 15W on 10M will drive to 1500W
out. This amp will do over 2500W into dummy load so its not working very

hard when run at legal levels. If interested call or e-mail.

>
> 73
> Alan
> W1HYV

Alan: I think he's right many (well most North American) cars back then were 6 volt. 12 volts was a European thing.

A suggested procedure.

1) Pull out the vibrator, they were usually a 4 pin can that looked like a big plug in electrolytic. I may even have a spare somewhere! A few were 6 pin (synchronous vibrators).
2) Plug it in to 6 volts; it will take about 0.3 amps times the number of tubes that would be roughly be 2 to 3 amps.
3) Check that tubes light up. Does on/off switch work etc.
If all OK so far?
4) Then rig up your voltmeter on 300 volt scale to the HT (B+) line that comes out of the secondary of the vibrator power supply transformer section to feed the plates of the tubes through the various circuits. You'll probably find it on the pin of one of the electrolytic smoothing capacitors. Between it and the chassis. (I believe the chassis was usually at ground potential; although there were some European sets that were arranged for cars with the positive battery terminal to to ground, however they were AFIK, all 12 volt European sets and often had other wavebands, such as 'Long Wave'); so it's 99% certain the chassis/case is the negative).
5) Plug in the vibrator momentarily; it should hum or buzz. If it doesn't hum the vibrator is faulty (occasionally you could shake or knock them into activity, at least temporarily). Also even if it does 'buzz' it may have bad switching contacts; I've never opened one that I can recall but there are presumably big contacts inside to switch the 6 volts back and forth into the vibrator transformer. The transformer steps up the 6 volts to B+ voltage.
6) As you plug in the vibrator the current from the 6 volt supply, or 6 volt battery, whatever you are using should increase. (The tubes will already be warmed up and ready to take B+ current, at this stage) I don't have a number but it would probably be of the order of, say, another 3

amps? (This is because the tube plates etc. operating at around 150 volts probably consume, say 150 milliamps; so at 6 volts including the inefficiencies of the vibrator circuit that would be 3 amps or a little more? Cos. the vibrator itself takes some current also.
7) If it does hum steadily, quickly measure the voltage as in (4). It will probably be anywhere from 150 to 250 volts, I think?
8) If it does not; quickly switch off and get a circuit and trouble shoot from the 6 volt input inwards.
9) If you start to suspect the B+ system you could temporarily disconnect it and trouble shoot for a bad capacitor to chassis etc. After 48 years some capacitors leak!
10) Bringing up the 6 volts gradually won't help; the tubes need close to 6 volts to heat properly. I suppose you could put a full 6 volts on the tube heaters and disconnecting the input to the vibrator circuit bring that up gradually. But I suspect that the vibrator will need at least 4 volts to get it's buzz started! So it won't prove much I think.
11) If all the above checks OK you may have a bad tube, or a weak one (typically the freq. changer often a 6K8 or later or similar version) which won't oscillate. You can test tubes.
12) Or, there may be circuit problem such as an open IF can, faulty capacitor to grid of the audio output or a number of other possibilities.
Have fun!
Corrections or better ideas on any of this by anyone are welcomed.?

Terry S.

From: Dave <newsgroups@boatanchors.com>
Message-ID: <0Csi5.14164$wT6.359747@news.uswest.net>
Source record: 63213

Hello all,

I have for sale a pretty decent GSB-100 that's either a great parts
set or could be restored.

The face is EXCELLENT. All the knobs are there and appear to be
original, the dial drum is in good shape (needs restringing), the meter is
there as well as the logo. The power transformer appears to be the only
critical component missing - it has a 3-cable harness extending out from
the rear of the chassis with an octal plug that was used to run it from
an external supply (which I don't have). There's a large choke hashed onto
the chassis top, but it doesn't appear that the chassis has been hacked into
at all. No extra holes in the chassis or face. Most of the tubes are
there.
Appears to be missing the single final tube (these rigs only had 1 final
tube)
and the rectifier. The rest of them are there. It has the bottom chassis
shell but is lacking the top.

Price is $100 plus shipping from Tacoma, WA. Local pickup would be
great, or I can drive up to 50 miles in any direction to meet someone.

I hate to part this rig out, so I won't be fielding any parts requests.
There
is just too much good here to trash completely.

I have several JPEG's available to serious requests.

Thanks to all,

Dave WB7AWK

105. FS: Henry Radio Tempo One - restore or parts rig $35

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-03 00:00:00 UTC
From: Dave <newsgroups@boatanchors.com>
Message-ID: <SDsi5.14165$wT6.360421@news.uswest.net>
Source record: 63214

For sale:

Silver face Henry Tempo One SSB rig. Face is nice - still
has remnants of 'remove protective film' plastic that the original
owner didn't bother to completely remove. Rather rough rig -
missing the tubes and the chassis bottom. But it's otherwise
all there and could be restored. Or use as a parts rig. NO
power supply.

I acquired it to build a 30 meter monobander a few years ago,
but just never got to it.

I ran this some time back and it sold instantly, with 2 or 3 backup
buyers. I have since been leveled by that blasted KAK virus and
lost all my emails, so if you are one of the backups and still want it,
drop me a note.

I have jpeg photos available. I also think I have a copy of the schematic.

Thanks to all,

Dave WB7AWK

I have some mics that look very similar to the magnavox model. These are commonly know as RS-38 Which was a Telephonics model number. They were used in WW-2 and just after by the navy
I am selling some in unused condition with straight cords for $50.00 each unused tested ok.
I hope this helps.

Ok picked up a Hallicrafters HT33B amplifier. It needed work as their is a short in the power supply section. Well I found one of the oil caps went bad so I replaced it, (took quite some time to find a replacement, I might add), well I powered it up an lo and behold it tripped the circuit breaker on the unit. Any one have any experience with this unit??? I am getting ready to toss this Hallicrafters in the Hudson River. I am sure it is something I have overlooked, any hints or suggestions would greatly be welcomed.

From: "Dave"
Subject: FS: Gonset GSB-100 for restore or parts rig...

Hello all,

I have for sale a pretty decent GSB-100 that's either a great parts
set or could be restored.

The face is EXCELLENT. All the knobs are there and appear to be
original, the dial drum is in good shape (needs restringing), the meter is
there as well as the logo. The power transformer appears to be the only
critical component missing - it has a 3-cable harness extending out from
the rear of the chassis with an octal plug that was used to run it from
an external supply (which I don't have). There's a large choke hashed onto
the chassis top, but it doesn't appear that the chassis has been hacked into
at all. No extra holes in the chassis or face. Most of the tubes are
there.
Appears to be missing the single final tube (these rigs only had 1 final
tube)
and the rectifier. The rest of them are there. It has the bottom chassis
shell but is lacking the top.

Price is $100 plus shipping from Tacoma, WA. Local pickup would be
great, or I can drive up to 50 miles in any direction to meet someone.

I hate to part this rig out, so I won't be fielding any parts requests.
There
is just too much good here to trash completely.

I have several JPEG's available to serious requests.

Thanks to all,

Dave WB7AWK

newsgroups@boatanchors.com

Date: Thu, 3 Aug 2000 22:20:25 -0700
From: "Dave"
Subject: FS: Henry Radio Tempo One - restore or parts rig $35

For sale:

Silver face Henry Tempo One SSB rig. Face is nice - still
has remnants of 'remove protective film' plastic that the original
owner didn't bother to completely remove. Rather rough rig -
missing the tubes and the chassis bottom. But it's otherwise
all there and could be restored. Or use as a parts rig. NO
power supply.

I acquired it to build a 30 meter monobander a few years ago,
but just never got to it.

I ran this some time back and it sold instantly, with 2 or 3 backup
buyers. I have since been leveled by that blasted KAK virus and
lost all my emails, so if you are one of the backups and still want it,
drop me a note.

I have jpeg photos available. I also think I have a copy of the schematic.

Thanks to all,

Dave WB7AWK

I powered it up an lo and behold it tripped the circuit breaker on the unit.
Any one have any experience with this unit??? I am getting ready to toss this
Hallicrafters in the Hudson River. I am sure it is something I have overlooked,
any hints or suggestions would greatly be welcomed.

Is there ANY way to switch this list out of DIGEST mode ?
I've checked the 'help' message and contacted the keeper
of the server, but found no way... Anyone ???

Subject: Harris rf-550 mini review.

re the "yikes" on the 137 for a manual...LOL....Harris radio gear is / was big bucks....used to install / use and maintain some of it - low end HF transceiver would be about 12000 back about 12-14 years ago (Canadian I think which was on par then). Accessories would scare ya as a ham. The manual, however.....ANY manual from Harris (that I've seen - quite a lot) would be a top notch piece of writing.....well written, accurate, not likely ambiguous and a virtual course in the item under discussion. Often they had (my experience was mostly 80's and early 90's vintage) detailed data sheets on various discrete components in the back....As a sparker at sea it was a joy to have on the shelf - and as an installation tech an invaluable asset - no guessing on connectors or numbering conventions (Ken/Yae/Ico take heed!)

> Alan
> W1HYV

Alan: I think he's right many (well most North American) cars back then were 6 volt. 12 volts was a European thing.

A suggested procedure.

1) Pull out the vibrator, they were usually a 4 pin can that looked like a big plug in electrolytic. I may even have a spare somewhere! A few were 6 pin (synchronous vibrators).
2) Plug it in to 6 volts; it will take about 0.3 amps times the number of tubes that would be roughly be 2 to 3 amps.
3) Check that tubes light up. Does on/off switch work etc.
If all OK so far?
4) Then rig up your voltmeter on 300 volt scale to the HT (B+) line that comes out of the secondary of the vibrator power supply transformer section to feed the plates of the tubes through the various circuits. You'll probably find it on the pin of one of the electrolytic smoothing capacitors. Between it and the chassis. (I believe the chassis was usually at ground potential; although there were some European sets that were arranged for cars with the positive battery terminal to to ground, however they were AFIK, all 12 volt European sets and often had other wavebands, such as 'Long Wave'); so it's 99% certain the chassis/case is the negative).
5) Plug in the vibrator momentarily; it should hum or buzz. If it doesn't hum the vibrator is faulty (occasionally you could shake or knock them into activity, at least temporarily). Also even if it does 'buzz' it may have bad switching contacts; I've never opened one that I can recall but there are presumably big contacts inside to switch the 6 volts back and forth into the vibrator transformer. The transformer steps up the 6 volts to B+ voltage.
6) As you plug in the vibrator the current from the 6 volt supply, or 6 volt battery, whatever you are using should increase. (The tubes will already be warmed up and ready to take B+ current, at this stage) I don't have a number but it would probably be of the order of, say, another 3 amps? (This is because the tube plates etc. operating at around 150 volts probably consume, say 150 milliamps; so at 6 volts including the inefficiencies of the vibrator circuit that would be 3 amps or a little more? Cos. the vibrator itself takes some current also.
7) If it does hum steadily, quickly measure the voltage as in (4). It will probably be anywhere from 150 to 250 volts, I think?
8) If it does not; quickly switch off and get a circuit and trouble shoot

from the 6 volt input inwards.
9) If you start to suspect the B+ system you could temporarily disconnect it and trouble shoot for a bad capacitor to chassis etc. After 48 years some capacitors leak!
10) Bringing up the 6 volts gradually won't help; the tubes need close to 6 volts to heat properly. I suppose you could put a full 6 volts on the tube heaters and disconnecting the input to the vibrator circuit bring that up gradually. But I suspect that the vibrator will need at least 4 volts to get it's buzz started! So it won't prove much I think.
11) If all the above checks OK you may have a bad tube, or a weak one (typically the freq. changer often a 6K8 or later or similar version) which won't oscillate. You can test tubes.
12) Or, there may be circuit problem such as an open IF can, faulty capacitor to grid of the audio output or a number of other possibilities.
Have fun!
Corrections or better ideas on any of this by anyone are welcomed.?

Hi:

Do not throw the amp in the Hudson River. Pull the rectifier tubes and fire it up. There should be no load on the transformer except for the filament winding. The circuit breaker should not pop. If it does, pull the tube. Now, there is no load.

If the breaker pops, then the transformer could be shorted. That complicates things quite a bit, since you will not want to buy a replacement transformer. That probably means to sell it to someone who is willing to figure out a replacement for it.

I would love to have it, but am afraid it would be too expensive to ship to the West Coast. Anyway, you can e-mail me with what you find and I will help remotely. I do have a schematic.

Yes, please do not throw it away. Oil caps do not need to be reformed so one of the previous responses can be ignored. I have had several HT-33Bs and wish I had never gotten rid of them. I still have a bunch of PL-172s in the hopes of finding another HT-33A or better yet an HT-33B. The prior suggestion is what you should do. Pull the rectifier tubes and then try it. This will eliminate the possibility of a bad transformer. In one of my HT-33s I did have the transformer short while I was on the air. Not a pretty sight or sound. Sounded like a machine gun going off, HI. Anyway, I think you get the picture, first eliminate the transformer and then look for other shorts. It could well be a defective output tube as well. So, you can also try turning it on without the final in place. Good luck with it, it is one heck of an amp. Also, be careful. 73 - Mike

I have acquired a metal tube in a bunch of other parts. Can someone help me identify this.

Tube# 2K25
Mfr: Raytheon
Is stamped "JAN-CRP" so it must be military

Doesn't look like anything else I've ever seen. It has a stem that goes down into the octal socket through one of the pins. Only has four pins in positions 1,2,7,8

Thanks

John

Its a Klystron.
it generates RF at 8.5 to 9.6 gigahertz, the probe is an aerial that
sticks down into a waveguide to transition the RF from the 2k25 to
wageguide.
unusual, but not valuable so far as I know

Ahhh...I think the 33A uses a pair of 3CX-300s instead of that gastly
expensive PL172.

Incidentally, Eimac came out with a replacementn (forgot the number) that
ran about two or three times the cost of an 8877, and now "I think" there is
a Russian equivelant for a whole lot less money.

Roger (K8RI)

or better yet an HT-33B. The prior

If the 33B has 866 HV rectifier tubes, they need to be aged for about .5 hours before you hit them with High voltage. If it uses 3B28 then this is not the case.

First remove the HV rect. tubes and try it with out them and see if it blow the fuse. If not replace the tubes and run them for 30 minutes and try the HV again.

136. Big dummy load, Bird Termaline

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-04 00:00:00 UTC
From: Mike <wb6vse@ipa.net>
Message-ID: <pDKi5.12408$mt6.898529@nntp3.onemain.com>
Source record: 63240

Hi to the list

Can any one advise me as to what frequencies the following dummy load is rated for. It uses a large connector, some what similar to a very large PL-259. Can anyone let me know if it can be used with an RG8 type cable and a source for the connectors? This thing is 19" long, 6" wide, and 8.5" high. Weighs about 7-8 lbs. with finsfor cooling.

Model 82AV
Watts 500
Ser # 183
Ohms 51.5

Manufactured by Bird Electronic Corp.
Cleveland, OH

Thank you

Thirty years or so ago these things were used by hams experimenting with in the SHF (or is that EHF?) band, and as a pump oscillator for par-amps (a form of maser). Today gunn diodes, and transistors perform the same functions so these tubes are quite obsolete. At VERY high power levels in the SHF and EHF bands tubes still rule the roost.

Many small boat marine radar front ends used the 2K25 as the microwave local oscillator (for the crystal mixer stage) in "X" band systems. Lots of those old Raytheons (and other brands) are still in use, but are generally too old to be economical to repair. Unless one just happened to have a spare 2K25, the old timers would be junked instead of buying a new 2K25. Right after WWII, they sold on the surplus market, 5 for $1. In the 1980's it was common to retail them for over $300 each (and another hundred bucks to install and tune it up). I'm not current in the business now, but I'll bet that Wholesalers still turn one over occasionally. (Russia and some Slavic countries (probably China, too, now) are the only current manufacturers of such exotic vacuum stuff.

Greetings to all ...

It is so nice to see someone like Terry Sanford to take the time to explain the test for the old Ford 6VDC radio. Hemming's Motor News magazine lists these old Ford radios at $150 up for the collectors of vintage automobiles in working condition. I have seen some sell over $300 in original working order.

Thanks for sharing your knowledge and experience Terry.

Subject: All known Drake-units listed

Hi folks,

I have now listed all known Drake communications units and accessories on my WEB-site; at least all the units that I know.

Please observe that my WEB-site has got a new URL:
http://home.online.no/~sindtorp/

You'll find the Drake-models listed under "Drake equipment list". All kind of versions regarding color etc. are there; 338 items in total!
I have NOT listed Drake's assistive listening products and satellite TV products.
My "Drake-want-list" is also there; 19 items only.

I would be very thankful to receive e-mails if you know of any Drake-models that I have not listed.

I hope that you will find the list useful, and you are welcome to add my site to your links.

Thanks and 73,
Sindre, LA6OP

Subject: FL2100B Yaesu linear amp

I have for sale a Yaesu FL2100B linear amp. I would rate it an 8 in
appearance. It just was gone through completely by a ham friend whos a
certified tech. It has new power supply diodes, a good set of finals, bias mod
fix, AG6K plate suppression mod, fans were cleaned and oiled, plus heavy duty
fixed caps installed in place of the light ones where they switch them in on
75 mtrs. Have the original manual too. Front panel is in good shape but there
is a crack in the meter cover face (might find a replacement.) The amp puts
out a solid 600 w or better/ $350 or BO

Jerry, your mistaken, I typically give advice Yes, Because I don't try and fight with them and whine about the illegal use of the amplifiers (LIKE YOU DO) doesn't mean anything, you go into a newsgroup and attempt to act like GOD!! you try to stir up problems, AS YOUR TRYING HERE! Your the first one to CRY CBER!! you make every attempt to belittle EVERYONE YOU CAN! I remember The dispute a while back!! My point WAS that being a decent person and NOT trying to Tell every person who runs an Amplifier on 11 meters what they already know, (that it is illegal) and imposing an ATTITUDE like you have. Gets absolutely NOWHERE! I Attempt to help them yes, I also make an attempt to get them to go forward with there hobby! Perhaps to even someday use there 11 meter equipment in a proper and legal manner as HAM! You Sir (term used loosely) just enjoy arguing and causing discontent! They have a term for persons like yourself it is "TROLL" If i were attempting to hide my identity I would post via dejanews with some un-known handle! What you fail to understand is with or without any advice i may attempt to dispense, the amplifiers will be run on 11 meters! If I make an attempt to at least have it run in a correct manner, and try to entice someone into becoming a Ham operator in the process, I think in the long run it is beneficial! Not everyone who runs a CB is a terrible person, just as not all Hams are great persons! Most of the Hams I know locally all started there radio hobby as CBers on SSB, I enjoy my hobby FULLY, and choose to talk to folks on 11meters as well as HF, this does not make me a terrible Amatuer! I earned my Extra class Ticket! I took the time needed to learn code and passed the 20 WPM exam, most of my life has been dedicated to radio communications! Because I choose to be friendly to folks on 11 meters it DOESN'T make me BAD! You seem to pop out of the woodwork every chance you get to BADMOUTH or BELITTLE folks! It really doesn't matter, I've made an attempt to find some parts for a leaning project, myself, a fellow HAM, and a CBer are all getting together and building this amplifier! Guess what we are ALL great friends! The CBer included, I met this fellow locally, and YES, I gave him advice on his ILLEGAL CB AMP! he will be taking the plunge and testing in two weeks!! So what is wrong with FRIENDLY HELP??? Should I choose to do as you do?? should I belittle my fellow radio hobbyist? If I had chosen to Lecture my local CBer on the legal issues of his amplifier he would still be tearing up the band and running it, regardless of what I said! He currently uses it very little, when he does use it he runs it CLEANLY with his mike gain set at a decent level! We have also become GOOD friends and look forward to talking on the HF bands! I'm hoping he will pass some of his knowledge onto his friends!!

One final point, I will build this amplifier, with, or without help from the good folks of the NG! What i don't find from my posting I will most likely find at the surplus dealers or Hamfests..... I'm sure some folks out here will flame me as you have attempted! However MR.Law, you may be surprised that some folks may not take your side!

Now that you've "EXPOSED ME" Jerry, and attempted to belittle me, and I've responded, I'm sure your pleased with yourself!

My apologies to the group for using bandwidth.....

From: "Alan Melia"
Subject: Toothed Drive belt source??

Hi I have a Wayne Kerr Source& Dectector (model SR268) unit for use with RF bridges. It has a strange toothed belt to drive the rotary switches that indicate the tuning and range. The belts are flat and moulded in green fabric reinforced plastic. There is a flexible spine about 1/8th inch wide with small cylindrical teeth protruding sideways, which engage with the toothed drive wheels. The wheels have a smooth centre region between the the

two rows of teeth. Both my belts have perished and fallen apart. I am sure these are not an in-house component, and they must have been used in other equipment for indexed slip-proof drives.
Do you know who might have made them or whether anybody stocks these things still??

The lady at WK was very nice but she could not even find their own information on procurement of these items (the unit is no longer made or supported).

Cheers and thanks for your interest

Hi, I am wanting a 2 meter ht or mobile radio, in GOOD condition. MUST BE WORKING PLEASE! My budget is limited to
100.00 dollars only. If you have a WORKING ht or mobile and wish to part with
it for this price or less, please e-mail me and let me know. Due to recent illness I am short of cash (had back surgery and
now scheduled for knee replacement). PLease e-mail me with
any radio in WORKING CONDITION. I would like to have one that is also able to recieve out of the 148mhz band as well. ie
wide recieve if that is possible! Mobile or ht would be fine, ANY BRAND is also fine. Thanks..
you may email me or call my voice mail at: 1-877-815-9949 ANYTIME!!
EMAIL ME AT:
kf4plp@onebox.com
have a good day~!!
please e-mail me only..thank you !

Sent via Deja.com http://www.deja.com/
Before you buy.

From: "Brian Denley"
Subject: Wanted: Hammarlund S-Meter

Looking for a replacement s-meter or s-meter crystal cover for an HQ-150. This s-meter has an 'orange' background and was used on other Hammarlund receivers. It's the crystal cover that I really need.
Thanks
Brian Denley

Subject: Warship freq's

Sam:
U.S. Navy ships hardly ever operate in a mode you could listen to. Almost everything is encrypted, whether voice or data. There are a couple of exceptions. They monitor and use the international VHF FM frequencies also used by pleasure, fishing, and merchant ships, especially Ch 16 (156.8MHz). You can listen on that frequency, and others, like Ch 13. These channels are used to communicate with other vessels while underway.
Some large U.S. Navy ships have amateur installations. I don't know of any easy way to point you to them.

Date: Sun, 30 Jul 2000 22:55:17 GMT
From: Dave Holford
Subject: Warship freq's

Carrier Battle groups can often be monitored on HF as they coordinate tracking of air and surface targets. Trouble is the frequencies tend to be a bit unpredictable. The mode is SSB and most of the conversation is in the clear with some classified data using "NUCO" in the format "NUCO - then the coded data - UN NUCO". With diligent listening you can often determine which carrier group it is. For example the George Washington battle group communications will once in a while have someone mention "the GW". These nets are characterised by somewhere around 6 to 20 members using single and double letter callsigns. You just have to keep looking. Anytime a major USN or NATO excercise is taking place you are likely to find them somewhere on HF. You will hear references to "alligator" (their HF data link system) and sometimes a callsign of "MAGIC" will be used by NATO AWACS aircraft operating with the battle group.

If you do find them they will frequently stay on the same frequency for several days so they can be monitored for long periods as they exhange

data on targets and attempt to classify them as friendly, neutral or hostile. When they are busy they are really busy, but when things quieten down they tend to be more relaxed and even engage in the odd bit of gossip.

If you are interested in getting a 'heads up' on such nets, or other military communications I suggest you send a message to:

majordomo@qth.net
with "subscribe milcom" in the body of the message.

You will then be a member of the military communications mailing list and start to get regular - lots of them - messages relating to monitorin military communications.

Dave:
I'm surprised, and stand corrected.
You can definitely predict that you will hear Navy ships on Ch 16 while at sea when encountering other vessels. They are funny; I've been at sea when they wouldn't give a callsign, though they insist upon knowing your name, callsign, flag, etc. They call themselves "U.S. Navy warship." Off Brazil 3 1/2 years ago a joint force of U.S., Canadian, Brazilian, plus one other NATO ship was patrolling. The interrogating ship (I was aboard a Liberian cargo ship) would not identify itself. We were close enough that I could read the callsign of the nearest one or two Canadian ships shown by the international signal flags painted on the bridge wings.
Tnx.

I saw a few boatanchors at the First Saturday Sale at ECI in Dallas this morning...seems to be a renewed interest in getting this Sale started up again...use to be great fun. Were probably 15-17 radio venders in the ECI parking lot, and 80-100 computer venders across the street. Saw some Hallicrafters, Hammarlund, and Nationals as well as antique battery rigs.

166. Pioneer SX-939 FM alignment

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-05 00:00:00 UTC
From: Nancy Marcotte <marcotte@iamerica.net>
Message-ID: <B5B1B09A.D32%marcotte@iamerica.net>
Source record: 63169

Sorry for the off topic, but I'm sure someone here knows the answer to this.

The 939 is probably from the early 70's. A beast of about 100 WPC I'd guess. I don't have any documentation for this receiver. I am cleaning it up and would like to align the FM.

The center needle does not indicate the exact center, and the FM stereo separation is a bit squirrley.

Can someone give me general alignment instructions (I'm experienced in HF and VHF radio alignment and have a HP sig gen and tools).

The variable capacitor cover has these adjustments marked:

FMOSC AMRF2 FMRF3 AMOSC FMRF2 AMRF1 FMRF1

Do I peak the RF screws at one freq, or are there various freqs to tune whilst doing this?

Also has screws for

IF Trans and RF coils 1, 2, 3

Any guidance would be appreciated.

I have several CU-421/SRA-15 manually controlled shipboard antenna couplers that can be used as is or for parts. The are very conservatively rated at 500 watts CW. My guess they will Handel much more. They use a pie circuit.

They contain one of each of the following major components.
10 to 300 uuf, 15KV Vacuum Variable Capacitor with drive= Jennings UCS300
50-5000 uuf, 2000 VAC Air variable Approx. size:10 " L X 6: W
RF coil 6 turn with variable loop
Meter
directional coupler.

These are unused priced at $300.00 FOB Somis
Supplied with a schematic and a copy of the parts list.

for more details and email photo please contact me directly.

Best regards,

170. Have vintage Tx parts; seek advice

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-05 00:00:00 UTC
From: maestro@cix.co.uk
Message-ID: <memo.20000805185837.49899D@maestro.compulink.co.uk>
Source record: 63173

I'd appreciate some advice re. a small quantity of parts from a few vintage homebrew boatanchor transmitters which I purchased for spares. Whether to auction them (eBay?), or a more suitable newsgroup, for example.

These include:

Raymart and Jackson Bros transmitter tuning capacitors and trimmers, large and well spaced for high HT (B+) and RF voltage use;

Insulating pillars, plain and beehive style, separation (ground to +) typically 3 cm (just over 1 inch);

Jackson Bros trimmer comprising vertical glass cylinder with fixed outer, and inner metal cylinder on fine-pitch screw with insulated adjusting knob on top. Like a tiny adjustable Leyden jar. Rare?

Ceramic tube bases: B4, B5, ?octal?, unusual 5 pin, unusual 7-pin (suspect for 811A and 813, as remains of these were found).

Moving-coil, moving-iron, and Radio Frequency (thermocouple) Panel Meters;

Large ceramic 2-pole 6-way "final" band switch;

Heater isolating transformers

RF chokes

Tuning coils

Old-fashioned panel switches (Single and double pole)

If you are looking for a replacement for any parts like these, or equipping a museum, or just collecting, please let me know and I will check to see if there is anything which might be suitable. I could make detailed measurements and a Polaroid photo for anyone /seriously/ interested in anything.

Could airmail any part to anywhere in the world, for a fair and reasonable price. NOT asking silly prices for anything.

Thanks for any advice,

Bill (GM8APX)(Edinburgh, Scotland) (QTHR)

174. WTB: Transmitting Cap

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-05 00:00:00 UTC
From: Bob Maser <w6tr@mindspring.com>
Message-ID: <8mhorf$ip1$1@slb7.atl.mindspring.net>
Source record: 63177

I am in need of 2 transmitting caps ?820pf at 8KV, 11A @ 1000 Kcs. I can use either the clyinderical Sangamo type G-2, or the Aerovox or Sprague caramel colored square ones. I am trying to put an old Gates broadcast transmitter on 75 meters and these caps are needed to resonate the tank. As an alternative, I could also use 2 1500pf caps to series up with the 2000pf caps that are already there. Size is not a constraint.

Thanks for reading.

Bob Maser W6TR Riverside, CA

175. FS: J-37/J-47 Military Telegraph Keys

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-05 00:00:00 UTC
From: Paul Keys <pkeys@columbiaelectronics.com>
Message-ID: <398C67BF.4F8CEE12@columbiaelectronics.com>

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have a few J-37/J-47 Telegraph Keys still packed in
their original hermetically sealed factory boxes from WW 2.
These have not seen daylight for over 50 years.

The J-47 is a J-37 mounted on a plastic base.

Offering these rare Keys at at $50.00 each including
shipping to any where in the U.S.

The Sunair GSL-1900A 1KW PEP or Average power RF Amplifiers covers 1.6
to 30MHz. Uses a single 4CX1500B and require a nominal 40 watts of
drive. Automatically tuned in a few seconds.

The power supply uses 115/230V/1PH/60Hz. The GSL-1900A consist of
LPA1900A RF Amplifier and PS-1900A Power supply.

As removed from military service in good condition with a set of plugs
and a copy of the manual at $1,500(Three available).
Sunair GSE-924 Exciter 100W with for use with the above
at $1,000 in good condition with manual and plugs. (one available)

The GSL-1900A with GSE-924 as a set for $2,250 for the pair.

This is commercial/military quality gear for those that like to tinker
with military equipment.

Prices are FOB Somis, CA

There is a photo and complete specifications of this item on our web
site in the HF section. http://www.columbiaelectronics.com

Visit our revised web site for our latest availability listings of
military radios!

Our site now has complete specifications on some of the most popular
military radios and more to come.

If you need manuals on military radios or military test sets we can
supply professionally photo copies. No pasting required on

Collins 208U-3 2-30Mhz RF Amplifier 3 KW in
good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single
4CX3000A to produce 3 KW PEP or average power with only
0.2 watts of input drive.

These are automatically tuned with a servo system that takes about
10 seconds to tuneup.

Primary power input is 200-250VAC, 3Ph, 47-60Hz.

Net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would
make a great addition to your station.

I am offering this unit two way as follows:

untested less the 4CX3000A Tube at $3,000. unpacked or

with a Guaranteed 4CX3000A final tubes at $4,000

Crating by a professional packer is $250.00 additional.

A complete service manual is included at no charge.

A Collins 671B-1 Receiver/ Exciter is designed for use with the
208U-3 is in stock at $1,500 in good condition sold only at this price
with a 208U-3.

We stock a complete line of Collins URG-1 (universal Radio group)
major components and manuals.

There are complete specifications and photo of this item on our web site
in the HF section.

This is commercial/military quality gear for those that like to tinker
with military equipment.

Prices are FOB Somis, CA

Source record: 63191
Cross-posted to: japan.test,rec.radio.amateur.boatanchors

5 Aug 2000 23:58:25 GMT

It's hard for me to believe that the next president of the United States will be George W. Bush or Al Gore. Both remind me of Hollywood movies that have been focus-grouped to death: they push all the appropriate buttons, but have zero original vision. Both stand for the same thing: corporate-driven business as usual.

There must be some way outta here.

Ralph Nader is no joker or thief. I think he and the Greens could give Al & George a good run for their money. At 65, Nader isn't running as fast as he used to, and the Green Party doesn't exactly have its platform figured out, but I think they have what it takes to inject a dose of radical democracy into the race. Unlike the two Tweedles, Nader is real, he stands for decency and common sense and he still commands a lot of respect in progressive and activist circles. And hidden behind the rainbow coalition of lefties, eco-feminists and crazies, the Green Party does have some great ideas. It's the only party that stands for the Tobin Tax, true cost markets, media reform and putting corporations in their place.

In October, with a fired-up Nader hurling intelligent sound bites into the presidential debates, the whole game show might actually be worth watching. The alternative is the most sophomoric presidential race in American history . . . and the lowest voter turnout ever.

I'm putting a GO GREEN - VOTE NADER graphic at the end of all my emails from now on. I'm betting that, between now and November, the American people will wake up to the fact that their sacred democratic experiment has now degenerated into a choice between a corporate-sponsored Republican and a corporate-sponsored Democrat.

In these heady post-WTO days, a sudden, massive protest vote against Al & George is entirely possible and Nader would be the most apparent heir. With perhaps less than 25 percent of the people voting, an inspired Nader campaign could grab a surprising share of the action. And even if he does not come close to winning, at least imagine how his campaign might pull together some of the fired-up, post-WTO forces and lay the groundwork for something really visionary in 2004.

Download the graphics and help launch an email pyramid scheme to dump the Tweedles! Two formats are available, a magazine

sticker (17K) or a Banner ad (5K):

==========

What it Means to be Green

"At the root of all Green political action is nonviolence, starting
with how we live our lives, taking small, unilateral steps toward
peace in everything we do. Green politics requires us to be both
tender and subversive. Affirming tenderness as a political value is
already subversive. In Green politics, we practice tenderness in
relations with others; in caring for ideas, art, language, and
culture; and in cherishing and protecting the Earth. To think Green
is to build solidarity with those working for social justice and human
rights everywhere, not bound by ideologies."

-Petra Kelly

Subject: *** AIR FRANCE CONCORD UPDATE ***

It took them eighty years since World War I, but
the French finally figured out how to kill Germans.

New Concorde schedules from Air France:-

Depart Paris CDG 1700
Arrive Hotel Gonesse 1703

Q.) What would the captain of the plane be doing today if he hadn't
been killed?

A.) Scratching weakly at the inside of his body bag.

Wealthy German tourists love the Hotel Gonesse. They drop in all the
time.

Q.) How many wealthy German tourists can fit into a VW Bug?

A.) 100. Four in the seats, 96 in the ashtray.

From: Bucky <jbgeer@swbell.net>

Subject: Dallas 1st Saturday Sale

I saw a few boatanchors at the First Saturday Sale at ECI in Dallas this morning...seems to be a renewed interest in getting this Sale started up again...use to be great fun. Were probably 15-17 radio venders in the ECI parking lot, and 80-100 computer venders across the street. Saw some Hallicrafters, Hammarlund, and Nationals as well as antique battery rigs.

Subject: FS:Collins 208U-3 3 KW HF RF Amplifier with 671B-1 Receiver/Exciter

Collins 208U-3 2-30Mhz RF Amplifier 3 KW in
good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single
4CX3000A to produce 3 KW PEP or average power with only
0.2 watts of input drive.

These are automatically tuned with a servo system that takes about
10 seconds to tuneup.

Primary power input is 200-250VAC, 3Ph, 47-60Hz.

Net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would
make a great addition to your station.

I am offering this unit two way as follows:

untested less the 4CX3000A Tube at $3,000. unpacked or

with a Guaranteed 4CX3000A final tubes at $4,000

Crating by a professional packer is $250.00 additional.

A complete service manual is included at no charge.

A Collins 671B-1 Receiver/ Exciter is designed for use with the
208U-3 is in stock at $1,500 in good condition sold only at this price
with a 208U-3.

We stock a complete line of Collins URG-1 (universal Radio group)
major components and manuals.

There are complete specifications and photo of this item on our web site

Date: Sat, 5 Aug 2000 18:58 +0100 (BST)
From: maestro@cix.co.uk (Bill J)
Subject: Have vintage Tx parts; seek advice

I'd appreciate some advice re. a small quantity of parts from a few vintage homebrew boatanchor transmitters which I purchased for spares. Whether to auction them (eBay?), or a more suitable newsgroup, for example.

These include:

Raymart and Jackson Bros transmitter tuning capacitors and trimmers, large and well spaced for high HT (B+) and RF voltage use;

Insulating pillars, plain and beehive style, separation (ground to +) typically 3 cm (just over 1 inch);

Jackson Bros trimmer comprising vertical glass cylinder with fixed outer, and inner metal cylinder on fine-pitch screw with insulated adjusting knob on top. Like a tiny adjustable Leyden jar. Rare?

Ceramic tube bases: B4, B5, ?octal?, unusual 5 pin, unusual 7-pin (suspect for 811A and 813, as remains of these were found).

Moving-coil, moving-iron, and Radio Frequency (thermocouple) Panel Meters;

Large ceramic 2-pole 6-way "final" band switch;

Heater isolating transformers

RF chokes

Tuning coils

Old-fashioned panel switches (Single and double pole)

If you are looking for a replacement for any parts like these, or equipping a museum, or just collecting, please let me know and I will check to see if there is anything which might be suitable. I could make detailed measurements and a Polaroid photo for anyone /seriously/ interested in anything.

Could airmail any part to anywhere in the world, for a fair and reasonable price. NOT asking silly prices for anything.

Thanks for any advice,

Bill (GM8APX)(Edinburgh, Scotland) (QTHR)

From: Nancy Marcotte <marcotte@iamerica.net>
Subject: Pioneer SX-939 FM alignment

Sorry for the off topic, but I'm sure someone here knows the answer to this.

The 939 is probably from the early 70's. A beast of about 100 WPC I'd
guess. I don't have any documentation for this receiver. I am cleaning it
up and would like to align the FM.

The center needle does not indicate the exact center, and the FM stereo
separation is a bit squirrley.

Can someone give me general alignment instructions (I'm experienced in HF
and VHF radio alignment and have a HP sig gen and tools).

The variable capacitor cover has these adjustments marked:

FMOSC AMRF2 FMRF3 AMOSC FMRF2 AMRF1 FMRF1

Do I peak the RF screws at one freq, or are there various freqs to tune
whilst doing this?

Also has screws for

IF Trans and RF coils 1, 2, 3

Any guidance would be appreciated.

From: Pete Domenici <senator_domenici@domenici.senate.gov>
Subject: Save the US: Vote NADER

5 Aug 2000 23:58:25 GMT

It's hard for me to believe that the next president of the United States will be George W. Bush or Al Gore. Both remind me of Hollywood movies that have been focus-grouped to death: they push all the appropriate buttons, but have zero original vision. Both stand for the same thing: corporate-driven business as usual.

There must be some way outta here.

Ralph Nader is no joker or thief. I think he and the Greens could give Al & George a good run for their money. At 65, Nader isn't running as fast as he used to, and the Green Party doesn't exactly have its platform figured out, but I think they have what it takes to inject a dose of radical democracy into the race. Unlike the two

Tweedles, Nader is real, he stands for decency and common sense and he still commands a lot of respect in progressive and activist circles. And hidden behind the rainbow coalition of lefties, eco-feminists and crazies, the Green Party does have some great ideas. It's the only party that stands for the Tobin Tax, true cost markets, media reform and putting corporations in their place.

In October, with a fired-up Nader hurling intelligent sound bites into the presidential debates, the whole game show might actually be worth watching. The alternative is the most sophomoric presidential race in American history . . . and the lowest voter turnout ever.

I'm putting a GO GREEN - VOTE NADER graphic at the end of all my emails from now on. I'm betting that, between now and November, the American people will wake up to the fact that their sacred democratic experiment has now degenerated into a choice between a corporate-sponsored Republican and a corporate-sponsored Democrat.

In these heady post-WTO days, a sudden, massive protest vote against Al & George is entirely possible and Nader would be the most apparent heir. With perhaps less than 25 percent of the people voting, an inspired Nader campaign could grab a surprising share of the action. And even if he does not come close to winning, at least imagine how his campaign might pull together some of the fired-up, post-WTO forces and lay the groundwork for something really visionary in 2004.

Download the graphics and help launch an email pyramid scheme to dump the Tweedles! Two formats are available, a magazine sticker (17K) or a Banner ad (5K):

Sticker ... http://adbusters.org/magazine/30/nader/tweedles.jpg

==========

What it Means to be Green

"At the root of all Green political action is nonviolence, starting
with how we live our lives, taking small, unilateral steps toward
peace in everything we do. Green politics requires us to be both
tender and subversive. Affirming tenderness as a political value is
already subversive. In Green politics, we practice tenderness in
relations with others; in caring for ideas, art, language, and
culture; and in cherishing and protecting the Earth. To think Green
is to build solidarity with those working for social justice and human
rights everywhere, not bound by ideologies."

-Petra Kelly

From: "Bob Maser" <w6tr@mindspring.com>
Subject: WTB: Transmitting Cap

I am in need of 2 transmitting caps ?820pf at 8KV, 11A @ 1000 Kcs. I can use either the clyinderical Sangamo type G-2, or the Aerovox or Sprague caramel colored square ones. I am trying to put an old Gates broadcast transmitter on 75 meters and these caps are needed to resonate the tank. As an alternative, I could also use 2 1500pf caps to series up with the 2000pf caps that are already there. Size is not a constraint.

Thanks for reading.

Hi Mike,

I had this same problem, no solution. The placement of the 10m tap is obviously the problem, but where it should go I'm not sure. I modd'ed my AL84 to take Svetlana EL509's, similar to the mod on the Svetlana website for the GL1000 (if I recall correctly), and am still having trouble tuning it on 10m. Unfortunately the amp is lower on the priority list than getting the tower up, so won't get back to it for a while.

What it looked like was that less inductance was needed than what was shown on the Ameritron spec. I finally just moved the tap to the input for the coil and it was close but still not right -- only got 200W out instead of about 350 or so expected (given that 10m is pretty much over the edge for those tubes). So tapping in closer to the coil input might do it for the stock tubes. Just don't burn up the tubes testing it!

Mike N2VR

Mike wrote:

I have for sale in excellent condition a 40 ft. crank-up tower made by the Aluma tower company in Vero Beach, FL.....Its a heavy duty aluminum crank-up tower......It comes with the Rohn TB-3 thrust bearing, the rotor plate is welded in and is universal.....Also has the tilt base and 3 -- 48" screw anchors with turnbuckles and plates to use, 2 sets of guys at 40' and 20 ft. position.....The guy wire is 1/4 and plastic coated and comes with an 8' aluminum mast with 1/8 wall..... The model number is the T-40H and sells new for $1,975 plus $250 crating charge and shipping, thats just the tower alone.....The crank-up tower is 3 years old and still shines and has everything needed to complete installation.....All you need is to dig the hole and pour the concrete.....I will take $1300 and you pick-up.....I'm located in Lakeville, Ma. 35 miles South of Boston..... I can be reached at (508) 821-2993 or e-mail.....WZ1U Steve

The Aluma Web site is: Http://www.alumatower.com

VERY nice Heathkit HW-30 (original non-A version) on Ebay.
Own the original 'Benton Harbor Lunchbox'. This one is collector
quality - one of the nicest I've seen. Has the logo, all knobs original,
no extra holes, absolutely NO mods, has original mic, power cord,
and even has the plastic cover for the license holder. Ground screw
has the nuts, and it's still got the RCA antenna jack. And it even
works! No dents, scratches, or any marks beyond very light wear
here and there from being 40 years old. If you've been looking for
a GOOD Twoer for a Heath collection, this is it!

Source record: 63126
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Two Ameco type CN nuvistor converters. The two meter unit is crystaled up for a 14-18 Mhz if output, the 6 meter unit is crystaled up for a 30.5-34.5 mhz IF (like the late SX-101 and NC 300 or NC303 units. The two meter unit is nearly blem free. the 6 meter unit has a few splothes on the edges of the copper plated case. Otherwise these units are in nice shape with all nuvistors in place (thee in each converter plus one 6J6 in each converter for Xtal LO). Very clean under the chassis. No docs, but power connections noted on the chassis. Figure 5 dollars first class postage conus.

$50.00 for the pair as noted.

tnx for the read.

Source record: 63137
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Hello all,

Found another box of these things in my garage - they sold like hotcakes last time, so here goes again.

It's a Walker Equipment model PTT-500T push-to-talk standard telephone handset. Exactly like the one on any old Western Electric phone, except there's a handy PTT switch on the handle, wired in series with the microphone element. Convenient, eh? Several folks have used them for various radio connection projects, paging, in-house intercom (with 2 of them and a talk battery arrangement of some sort).

See a photo at:

http://www.boatanchors.com/public_html/handset.jpg

and the data sheet that comes with it at:

http://www.boatanchors.com/public_html/handset_datasheet.jpg

These are new in the box, all brown, and less coily cable. Uses standard coily cord (4 conductor, not 2) for a regular phone handset.

Price is only $10 inlcuding US Priority Mail to any US destination. The current wholesale price from Walker is over $25, with $36 a standard street price.

Thanks for the read,

Dave WB7AWK

There is a web site www.harbach.com
This fellow has a drop in replacement for the power
supply...everything but the transformer. I did this to my SB=200
about a year ago. Price was under $100. He also markets
a soft start...to give some delay to the power on to enhance
tube life. He also has an optical isolator to couple the
exciter/transceiver to the amp. The SB-200 was designed when tube
exciters were the rule. Modern tranceivers are not normally built to
switch the voltages and currents needed to switch from send to
receive. This optical isolator solves that problem. It took me less
than two hours to do all three modifications. He has similar products
for the SB-220

Who on earth decided it would be a good idea to PAINT it? I would have
easily paid well over your asking price if iw had the original knobs and
front panel. If the knobs were broken, then you only need one to make a
mould to make the rest.

I don't suppose you have a 'dynamotor' for the No.19 set? or the
microphone/headphones?

Tnx for looking!

Date: Sun, 6 Aug 2000 14:43:18 -0700
From: "Bob"
Subject: Ameco 6 and 2 Meter nuvistor converters

Two Ameco type CN nuvistor converters. The two meter unit is crystaled up for a 14-18 Mhz if output, the 6 meter unit is crystaled up for a 30.5-34.5 mhz IF (like the late SX-101 and NC 300 or NC303 units. The two meter unit is nearly blem free. the 6 meter unit has a few splothes on the edges of the copper plated case. Otherwise these units are in nice shape with all nuvistors in place (thee in each converter plus one 6J6 in each converter for Xtal LO). Very clean under the chassis. No docs, but power connections noted on the chassis. Figure 5 dollars first class postage conus.

$50.00 for the pair as noted.

tnx for the read.

Subject: Drake station for sale

Hello
I have a very nice near mint.. Drake TR4CW for sale with the AC4, MS4
and Remote VFO RV4C which also has a speaker ..
I am only the second owner of this gear.. it all works perfect and is
in line .The matching Drake mic is included as well..
This is very nice gear as noted..I am taking offers or trade but would
like to sell.....
Reason for selling is that I 'm thinking of purchasing some newer Ten
Tec gear..

thanks tim

Subject: FA: Collector quality Heathkit Twoer HW-30 on Ebay

VERY nice Heathkit HW-30 (original non-A version) on Ebay.
Own the original 'Benton Harbor Lunchbox'. This one is collector
quality - one of the nicest I've seen. Has the logo, all knobs original,
no extra holes, absolutely NO mods, has original mic, power cord,
and even has the plastic cover for the license holder. Ground screw
has the nuts, and it's still got the RCA antenna jack. And it even
works! No dents, scratches, or any marks beyond very light wear
here and there from being 40 years old. If you've been looking for
a GOOD Twoer for a Heath collection, this is it!

Subject: FA WW2 19 Set

Who on earth decided it would be a good idea to PAINT it? I would have easily paid well over your asking price if iw had the original knobs and front panel. If the knobs were broken, then you only need one to make a mould to make the rest.

I don't suppose you have a 'dynamotor' for the No.19 set? or the microphone/headphones?

From: "Dave"
Subject: FS: PTT telephone handsets - cheap!

Hello all,

Found another box of these things in my garage - they sold like hotcakes last time, so here goes again.

It's a Walker Equipment model PTT-500T push-to-talk standard telephone handset. Exactly like the one on any old Western Electric phone, except there's a handy PTT switch on the handle, wired in series with the microphone element. Convenient, eh? Several folks have used them for various radio connection projects, paging, in-house intercom (with 2 of them and a talk battery arrangement of some sort).

See a photo at:

http://www.boatanchors.com/public_html/handset.jpg

and the data sheet that comes with it at:

http://www.boatanchors.com/public_html/handset_datasheet.jpg

These are new in the box, all brown, and less coily cable. Uses standard coily cord (4 conductor, not 2) for a regular phone handset.

Price is only $10 inlcuding US Priority Mail to any US destination. The current wholesale price from Walker is over $25, with $36 a standard street price.

Thanks for the read,

Dave WB7AWK

From: Mike Hammer
Subject: Help with Ameritron AL 84

Hi Mike,

I had this same problem, no solution. The placement of the 10m tap is obviously the problem, but where it should go I'm not sure. I modd'ed my AL84 to take Svetlana EL509's, similar to the mod on the Svetlana website for the GL1000 (if I recall correctly), and am still having trouble tuning it on 10m. Unfortunately the amp is lower on the priority list than getting the tower up, so won't get back to it for a while.

What it looked like was that less inductance was needed than what was shown on the Ameritron spec. I finally just moved the tap to the input for the coil and it was close but still not right -- only got 200W out instead of about 350 or so expected (given that 10m is pretty much over the edge for those tubes). So tapping in closer to the coil input might do it for the stock tubes. Just don't burn up the tubes testing it!

Mike N2VR

Mike wrote:

Subject: =AD: Prep for HAM/FCC tests (yes, new tests too!). Download today!= .

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

From: Bill Abate
Subject: Henry 2K-3 info needed

I just picked up a semi-basket case Henry Amp. The more I checked it out, the more I liked it. Nice Pi-L output. Built rather well. Think I might resurrect it. I need info/jpg's/schematic/etc. I just have the RF deck, but I'd rather have that than just the power supply! It's in fine condition. There have been some minor mods that I will have to weed out.

I've seen some info on the net on the 2K but not the 2KD-3. I'd like to evaluate it before spending bucks on a manual, etc. (its not listed in the usual places). I think I'm missing the bottom cover of the tube compartment. The tubes and chimneys are missing but I think the rest is there. I think it was a floor console but that's part of the help I need.

From: yardleyite@aol.com (Yardleyite)
Subject: National NCX-1000 TX and a RX problem: HELP!!!

Name here is Joe (N3IBX) and I have a
National NCX-1000 that has a TX and a RX problem I can't figure out:

I has 400 watts of CW output on 20 meters, and sometimes output on 40 meters. No ouptput on the other bands. The RX is working on all bands; but the sensitivity seems low and the AGC is doing strange things.
When I first got the radio it lit up but had no output power or RX. After attempting to align/check it out I was able to get to the aforementioned palteau (if u want to call it that).

Would anyone have any experience with this radio that may be able to give me and a friend (who is working on it) some advice? It's all early solid state with the exception of the final and the driver. The circutry seems real different to me since I'm not thoroughly versed in early transistor technology. I have the full service manual with all of the updates.

Any advice will be greatly appreciated. Thanks for the bandwidth.

252. Help winding a transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-07 00:00:00 UTC
From: WB3KUM/9 <breedend@NO.excite.SPAM.com>
Message-ID: <398ED816.4C4414A2@NO.excite.SPAM.com>
Source record: 63009
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I am in the process of winding a transformer for a HB project. I thought I remember reading and doing 2 wraps per volt as a teenager. Checking the internet, I saw one place advertising for sale transformers with 1 wrap per volt. I have two ARRL Handbooks (older). One says 5-7 wraps per volt, the other says 6-8 wraps per volt. The transformer has a center core section of about 3.5 sq inches and about 2 inches deep. The reference in the handbook was 1 sq inch.

I would like to do 5 wraps per inch, but I don't know it I have enough room for that with the 5 winding I am putting on the transformer.

Spec.
600V secondary B+
250VCT secondary low B+/bias
117V primary
6.3 filament

350W ICAS

Core is an old transformer out of a 500W microwave oven.

Many thanks

Dennis WB3KUM/9

253. Parts needed for National NC-173

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-07 00:00:00 UTC
From: john derrico <johnd@cts.analog.com>
Message-ID: <398EE1C6.5F1E3F7F@cts.analog.com>
Source record: 63010

I am currently restoring a National NC-173 receiver (circa 1947) and need a few more parts to complete the project. Your help is greatly appreciated.

- Selectivity control knob
- Antenna terminal strip (3-term(screw type) W/ground link)
- External chassis ground terminal (screw type)
- National logo for front.

- Also a couple of (unused) NOS carbon 47K 1W 10% resistors for another project.

Thanks,

John

254. Hallicrafters Haters Association

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-07 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <20000807123115.14945.00000471@ng-fh1.aol.com>
Source record: 63011

If you have ever worked on a Hallicrafters radio....you'll want to join my new organization: Hallicrafters Haters Association.

Multiple wax-capacitor failures, cheap punched and stamped metal chassis parts warping, cheasey silkscreening, incomplete maintenance sections in manuals, local-oscillator instability, peeling cabinet paint, slipping tuning dials, distorted audio, poor HF sensitivity...etc, etc.

These will be just a sampling of the subjects to be discussed on our new HHA 40-meter net.

Any interest out there?

Pat, WB9GKZ

Your subject line brought a smile, although it's sure to stir controversy.

I can't confirm or deny your technical observations. My personal experiences that could qualify me as a hallicrafters hater include owning a succession of truly awful hallicrafters receivers. The S-119, S-120, S-20R, SX-140 and SX-111.

In defense of hallicrafters, I'll admit that the S-119 and S-120 were never intended to be communicaitons receivers. But they were all I could afford in 1962 and 1964. And the S-20R was old even when I got it around 1965 or so. If someone walked across the floor, the vibrations would cause the LO to jump about 20 kHz. The SX-111 had bad microphonics. Maybe I could have fixed it, but I was just a dumb kid.

I think hallicrafters was really trimming cost (and quality) in the 60's and exploring the bottom end. Their top of the line stuff was probably fine.

The S-120 didn't have a true BFO. Instead, the suppressor of the mixer was grounded thru a pot, causing it to oscillate like a regen. Gave CW a sound kind of like gargling, if you could hear it over the hum. I think the SX-140 worked the same way, with the added benefit that when you adjusted the BFO, the receiver frequency changed dramatically.

I have to say though, I loved that HT-40 transmitter. Even picked up one at a hamfest a while back. I also bought an S-120 over the internet, causing one boyhood ham friend to remark that I had "lost all credibility as a mammal." He may be right.

I'm building a 1 KW antenna tuner along the lines of the Ultimate Transmatch from the ARRL Handbook. I'm looking for two big air variable caps that'll handle 1 KW or better, with a maximum value of at least 300 pF, and preferably more like 400 pF. I also need a turns counter for my roller coil. Nothing fancy, but something usable. Lastly, I could use a toroidal 4:1 balun. I could buy a set of cores and some insulating tape and wind one, but it would be nice to find one already made, perhaps from a commercial tuner that someone is junking out.

I have 4 NOS JAN TJ311M01 Ballast Tubes for R-390A. They are in original military packaging. The TJ311M01 is a military approved replacement for the 3TF7 type Ballast tube used in the IF Deck of the R-390A HF Receiver.

They are available for $20 each plus $4.00 USPS priority mail/insured in the US.

For a discussion on the applicability of the TJ311M01 Ballast Tube refer to the r-390 discussion archive:

If you are going to use the original primary winding on the microwave transformer, try winding ten experimental turns over it and see wht voltage you get. Some calculating will tell you how many turns per volt. If you're going to strip the core bare, count the primary turns as you take it apart. #turns/120 will equal turns per volt.

I have some data which may help.
If your core is 3.5 sq inches the Turns per volt would be 1.79.
As I do not know what gauge wire you are using etc., I cannot determine if any particular winding will actually fit in the space given. If your xfmr is the size of the beast that I have (same source) you will have no trouble there. If you use the above figures you will get the correct voltages from your windings
I have done many xfmrs over the years and I developed a program in my computer to do the calculations. Be advised that the figures the others gave you MAY be right for THEIR xfmr, but theirs may have a different core area etc. which changes everything.
If you require a fuller calculation for your winding, please e-mail me direct at parrfo@sympatico.ca with voltage, current required for each winding & I will e-mail the results to you asap
Regards
Jack Parr

Nobody has the monopoly on poor designs/poor choice of parts...

Collins KWM-2 open frame relay dirt problems
High freq hiss in EVERY Collins solid-state radio I've ever used

And speaking of distorted audio... another Collins specialty (51J/75A
series). Seems Collins couldn't design an audio stage to save their lives.
Absolutely the most irritating audio out there. Even worse than my
Scrapwood TS-50 with the built-in speaker. Jesus Christ, guys, it AIN'T
that hard! Any RCA tube manual has schematics for decent audio stages.
Even AA5s have better audio.

Bad power transformers in National products
Huge image and intermodulation distortion problems in Nationals
Absolutely the WORST bypass caps in Hammarlund SP-600s
Shitty friction drive dials in 40s-50s Hammarlunds
Crummy paint on E.F. Johnson stuff (ever see an unscratched one?)
...and the SP-600 also takes the cake for "most impossible to repair" radio.

For Sale: Excellent Plate/Filament Transformer, Hermetic Seal, MFG Paeco "
Hewlett Packard" 115/220 Primary

Secondaries as follows:

1. 280 VAC at 200 ma full secondary DC
2. 209 VAC at 125 ma full secondary DC
3. 6.3VAC at 4.5 amps
4. 6.3VAC at 4.5 amps
5. 6.3VAC at 4.5 amps
6. 6.3VAC at 1.4 amps

All ratings are for continuous commercial service. Full transformer
data silkscreened on the top of the unit. connections are via insulated
turret terminals on the bottom of the unit. Mounting is vertical via 4 1/4
inch studs on the bottom of the unit. Removed from HP test equipment,
Excellent mechanical and electrical condition. Great for a moderately sized
tube amplifier where separate plate and screen supplies are satisfied with a
bridge rectifier on HV windings or for a 100 watt or so tube transmitter
where the 289 vac winding can be applied to a voltage doubler for a nice 800
vdc or so. Shipping weight 15 lbs from zip 95827. Size is 4 1/2 wide X 4"
deep X 5 1/4 inches tall.

$25 plus ups from zip 95827 on 15 lbs.

Tnx for the read

Bob, KE6F

Date: 2000-08-07 00:00:00 UTC
From: Brian Denley <bdenley@erols.com>
Message-ID: <8mnvao$ib3$1@bob.news.rcn.net>
Source record: 63042

I am looking at a very nice Collins boatanchor for auction but the seller is selling the case separate from the receiver. Is this typical on Collins sales? I have never seen this before.
Brian Denley

I have two items for sale:

W5-M 25 Watt Audio Amp with Peerless 16309 output transformer. This classic Williamson is flat from below 10 Hz to 100 kHz! I was going to restore it, but don't really have time or a use for it. It's complete with cover and bottom plate, and there's no rust, scrapes or dents except for a small spot (<1/4") on one corner of the chassis where the copper plating is gone. No broken parts. The amp has 6L6s installed instead of the original KT-66s. If the face with all the connectors is considered the front, there is a 3/8 hole in the back and an on/off toggle switch on the left side. The wiring job isn't very pretty, but I've seen much worse and it works. Will sell for $95 plus shipping with a condensed manual (everything but the step-by-step).

From the early 50's: QM-1 Q Meter. Museum quality. Meticulously built in a weak moment recently from an unopened kit. With calibration standard and manual, of course. I made no marks in the manual - they didn't have step-by-step instructions in those days! $150 plus shipping.

Perfect for homebrew transmitter, or replacement:

Triad R-26A. Never used - no rust, just a few very light scratches on back.

Primary: 115 VAC
Secondary #1: 6.3VCT @ 8A
Secondary #2: 6.3V @ 3A
Secondary #3: 6.3V @ 1A
Secondary #4: 5V @ 3A
Secondary #5: 880VCT @ 200mA with taps at 720VCT

$65 plus shipping from 98028 (Seattle area)
Pictures available on request.

Terry K8TP

289. New blank Heath front panels

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-07 00:00:00 UTC
From: Terry Perdue <terryp@halcyon.com>
Message-ID: <8mo26cnth2@brokaw.wa.com>
Source record: 63046

I happen to have three new unpunched and unpainted aluminum front panels that, when punched, painted, and silkscreened, became the front panels on many Heath products. They measure 8.5" by 13". The IT-17 Tube Tester is just one of many kits (the only one I happen to have) that used this panel.

If anyone has a kit they're restoring that has a bent or dented front panel, and hasn't been able to find a parts rig, this could be a solution. Alternatively, it could turn a discarded cabinet into a homebrew 'one-of-a-kind' Heathkit!

$10 each, or all three for $25.

HEY Pat - and the rest of you guys - you must have too much time on your hands, and crappy band conditions and weather are getting to ya'...

Problem REALLY is, you're looking BACKWARDS in time at radios that weren't all that bad - IN THEIR DAY AND TECHNOLOGY! After all, what significantly BETTER receiver in it's price class WAS there than an SX-100? Apply the same test to ANY of the other Hallicrafters/National/Hammerlund, and dollar for dollar, model for model, the comparisons won't be very far apart.

NOW, add 40-50 years to the mix, and switch from your current super whoop-te-doo solid state transceiver, and ALL that old stuff seems like junk in comparison... What do you suppose an Icom 756 PRO will look and play like 50 years from now, compared to whatever might be available at THAT time in the future?

Source record: 63060

For Sale: Johnson 500 RF deck & original Johnson Manual. No PS/Modulator. Case was glass beaded, powder coated and is ready for Johnson Maroon paint. Front is in OK shape. Has scratches around edges and some scratches on front. Nothing obscene though. All knobs are there but a couple are missing white pointers. The deck appears totally stock except the clipper circuit looks like it was bypassed for better fidelity audio. This mod was common on many 500's and Valiants. I have had it for awhile and hooked it up to a friends 500 PS/Modulator when I bought it and it worked fine. All tubes are good including 4-400 final. I was going to build a killer PS/Modulator for it but too many projects- not enough time. New motorcycle forces sale. Serious inquiries only- no trades, no hagglers, no tire kickers. I am not giving it away considering a 500 with PS/Mod sold on Ebay for $2000 awhile back. First $800+ shipping takes it. You can check it out in person near Philly if you like. Grab it before it ends up on ebay this weekend.
Thanks for looking!
Jim

Message-ID: <8moc2q$fd7$1@mailint03.im.hou.compaq.com>
Source record: 63062

I have some BC611 BX-49 Crystal boxes available, 12 channels, range 4035 to 5500 kHz. The box is OK but the white plastic tags on the outside of the box are a bit deformed and curled from where the tags stick out of the tag holder. The plastic suffers from old age I reckon. The tags have the channel frequency written on them. Because the tags are curled a bit and because the plastic is become brittle I can't 100% guarantee they won't brake during transport but I don't think this is likely. This is the only negative thing I can think of. The box it self and its content are in fine condition taken in account that it dates from 1944.

Price is 35US$ per box, shipping to the US is 15$ extra. With a bit of luck 2 boxes will ship for 15$ when below 5 kilo. Next shipping class is 30$ for up to 10kilo.

Message-ID: <8mod75$u3$1@newstoo.ericsson.se>
Source record: 63063
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

This is a complete subject in itself, and soon to become a dead art! To wind a transformer, there is a formula (that I have forgotten) for calculating the total power capacity of the former/laminations you have. If that is big enough then it is safe to continue.

Calculate the wire size you need for all windings to take the currents (using another formula that I have also forgotten), then using the wire data, calculate how many turns/volt you can have for the former winding area you have. There is a range of flux density that you can assume, if you do not have data for the iron core material you have. You can also check the turns by putting the number back into the formula and checking you have the right former area.

As long as the former winding area is the right size, then you will have the right number of turns/volt. I will see if I can bring the data to work tomorrow and give you the info and formulas and tables you need. I have wound loads of transformers and all "run cold", but in the meantime you can take your laminations and clean/laquer them so they are insulated from each other when you assemble the former again. One of the big problems with re-using transformer cores is the eddy currents caused by laminations shorting together. This is one of the main causes of the transformer buzzing and getting hot.

If you wish, I will see if I can scan my lab book and e-mail you the pages, but it is all hand-written. No promises; I am rather busy at the moment having just moved house. When you buy a house, you don't buy a home, but another full-time job!

This install sugestion is elaborate, but worth while if you wont to protect your equipment and your vehicle. This also adds the benifit of opperating with your ignition and motor turned off.

Purchase a quality battery, a dry cell or gell cell is ideal, especially the marine type that can handle being drawn flat dead and recharged without any problems. Install a battery isolater ratted around one hundred and fifty amperes. Connect your power cables to this new battery, be sure to fuse both your power and ground cables. Do not forget the ground from frame to battery. Connect the isolator to both of your batteries and then to your alternator. For added protection against line voltage drop you can home build a capasitor pack, the larger the pack the more voltage change at high current it can handle using appropeitly ratted parts.

Not, your radios are isolated from your vehilcle electrical system and the only interference possible is from RF. Propperly sheilded cables will take care of this aspect. Best of all, now you can opperate without burning up a tank full of gas!

Opperating time is about and hour at full power and steady use. Charge time, as long as it takes to get where you are going. I run this set up in my 98 Ford F-150 without any faults.

From: "Nico van Dongen"
Subject: FS: BC611 BX-49 crystal boxes

I have some BC611 BX-49 Crystal boxes available, 12 channels, range 4035 to
5500 kHz. The box is OK but the white plastic tags on the outside of the box
are a bit deformed and curled from where the tags stick out of the tag
holder. The plastic suffers from old age I reckon. The tags have the channel
frequency written on them. Because the tags are curled a bit and because the
plastic is become brittle I can't 100% guarantee they won't brake during
transport but I don't think this is likely. This is the only negative thing
I can think of. The box it self and its content are in fine condition taken
in account that it dates from 1944.

Price is 35US$ per box, shipping to the US is 15$ extra. With a bit of luck
2 boxes will ship for 15$ when below 5 kilo. Next shipping class is 30$ for
up to 10kilo.

Date: Mon, 7 Aug 2000 21:10:05 -0700
From: "Terry Perdue"
Subject: FS: Heathkits

I have two items for sale:

W5-M 25 Watt Audio Amp with Peerless 16309 output transformer. This classic Williamson is flat from below 10 Hz to 100 kHz! I was going to restore it, but don't really have time or a use for it. It's complete with cover and bottom plate, and there's no rust, scrapes or dents except for a small spot (<1/4") on one corner of the chassis where the copper plating is gone. No

broken parts. The amp has 6L6s installed instead of the original KT-66s. If the face with all the connectors is considered the front, there is a 3/8 hole in the back and an on/off toggle switch on the left side. The wiring job isn't very pretty, but I've seen much worse and it works. Will sell for $95 plus shipping with a condensed manual (everything but the step-by-step).

Date: Mon, 07 Aug 2000 17:01:22 -0700
From: csc
Subject: FS: Mercury 300 tube tester

This is a multi-part message in MIME format.

name="Mercury 300.txt"

Content-Disposition: inline;

For Sale,

Mercury model 300 combination tube tester and VOM.

Very good condition with wooden case and mirror under the lid.

Comes with AD-4 tube base adapter and also CRT adapter / rejuvinator.

Complete with manual and tube chart.

$80 US plus shipping.

Please reply to csc@smartt.com if interested.

Colin

Date: Mon, 7 Aug 2000 19:13:08 -0700
From: "Bob"
Subject: FS: Plate/Filament Xfmr

For Sale: Excellent Plate/Filament Transformer, Hermetic Seal, MFG Paeco "
Hewlett Packard" 115/220 Primary

Secondaries as follows:

1. 280 VAC at 200 ma full secondary DC
2. 209 VAC at 125 ma full secondary DC
3. 6.3VAC at 4.5 amps
4. 6.3VAC at 4.5 amps
5. 6.3VAC at 4.5 amps
6. 6.3VAC at 1.4 amps

All ratings are for continuous commercial service. Full transformer data silkscreened on the top of the unit. connections are via insulated turret terminals on the bottom of the unit. Mounting is vertical via 4 1/4 inch studs on the bottom of the unit. Removed from HP test equipment, Excellent mechanical and electrical condition. Great for a moderately sized tube amplifier where separate plate and screen supplies are satisfied with a bridge rectifier on HV windings or for a 100 watt or so tube transmitter

where the 289 vac winding can be applied to a voltage doubler for a nice 800 vdc or so. Shipping weight 15 lbs from zip 95827. Size is 4 1/2 wide X 4" deep X 5 1/4 inches tall.

$25 plus ups from zip 95827 on 15 lbs.

Tnx for the read

Bob, KE6F

From: wb9gkz@aol.com (WB9GKZ)
Subject: Hallicrafters Haters Association

If you have ever worked on a Hallicrafters radio....you'll want to join my new organization: Hallicrafters Haters Association.

Multiple wax-capacitor failures, cheap punched and stamped metal chassis parts warping, cheasey silkscreening, incomplete maintenance sections in manuals, local-oscillator instability, peeling cabinet paint, slipping tuning dials, distorted audio, poor HF sensitivity...etc, etc.

These will be just a sampling of the subjects to be discussed on our new HHA 40-meter net.

Any interest out there?

Pat, WB9GKZ
Hallicrafters Hater since 1971

Date: Mon, 07 Aug 2000 17:36:58 GMT
From: Nick Kennedy
Subject: Hallicrafters Haters Association

Your subject line brought a smile, although it's sure to stir controversy.

I can't confirm or deny your technical observations. My personal experiences that could qualify me as a hallicrafters hater include owning a succession of truly awful hallicrafters receivers. The S-119, S-120, S-20R, SX-140 and SX-111.

In defense of hallicrafters, I'll admit that the S-119 and S-120 were never intended to be communicaitons receivers. But they were all I could afford in 1962 and 1964. And the S-20R was old even when I got it around 1965 or so. If someone walked across the floor, the vibrations would cause the LO to jump about 20 kHz. The SX-111 had bad microphonics. Maybe I could have fixed it, but I was just a dumb kid.

I think hallicrafters was really trimming cost (and quality) in the 60's and exploring the bottom end. Their top of the line stuff was probably fine.

The S-120 didn't have a true BFO. Instead, the suppressor of the mixer was grounded thru a pot, causing it to oscillate like a regen. Gave CW a sound kind of like gargling, if you could hear it over the hum. I think the SX-140 worked the same way, with the added benefit that when

you adjusted the BFO, the receiver frequency changed dramatically.

I have to say though, I loved that HT-40 transmitter. Even picked up
one at a hamfest a while back. I also bought an S-120 over the
internet, causing one boyhood ham friend to remark that I had "lost all
credibility as a mammal." He may be right.

73,

Nick, WA5BDU
hallicrafter lover/hater

Nobody has the monopoly on poor designs/poor choice of parts...

Collins KWM-2 open frame relay dirt problems
High freq hiss in EVERY Collins solid-state radio I've ever used

And speaking of distorted audio... another Collins specialty (51J/75A series). Seems Collins couldn't design an audio stage to save their lives. Absolutely the most irritating audio out there. Even worse than my Scrapwood TS-50 with the built-in speaker. Jesus Christ, guys, it AIN'T that hard! Any RCA tube manual has schematics for decent audio stages. Even AA5s have better audio.

Bad power transformers in National products
Huge image and intermodulation distortion problems in Nationals
Absolutely the WORST bypass caps in Hammarlund SP-600s
Shitty friction drive dials in 40s-50s Hammarlunds
Crummy paint on E.F. Johnson stuff (ever see an unscratched one?)
...and the SP-600 also takes the cake for "most impossible to repair" radio.

HEY Pat - and the rest of you guys - you must have too much time on your hands, and crappy band conditions and weather are getting to ya'...

Problem REALLY is, you're looking BACKWARDS in time at radios that weren't all that bad - IN THEIR DAY AND TECHNOLOGY! After all, what significantly BETTER receiver in it's price class WAS there than an SX-100? Apply the same test to ANY of the other Hallicrafters/National/Hammerlund, and dollar for dollar, model for model, the comparisons won't be very far apart.

NOW, add 40-50 years to the mix, and switch from your current super whoop-te-doo solid state transceiver, and ALL that old stuff seems like junk in comparison... What do you suppose an Icom 756 PRO will look and play like 50 years from now, compared to whatever might be available at THAT time in the future?

From: WB3KUM/9
Subject: Help winding a transformer

I am in the process of winding a transformer for a HB project. I
thought I remember reading and doing 2 wraps per volt as a teenager.
Checking the internet, I saw one place advertising for sale transformers
with 1 wrap per volt. I have two ARRL Handbooks (older). One says 5-7
wraps per volt, the other says 6-8 wraps per volt. The transformer has
a center core section of about 3.5 sq inches and about 2 inches deep.
The reference in the handbook was 1 sq inch.

I would like to do 5 wraps per inch, but I don't know it I have enough
room for that with the 5 winding I am putting on the transformer.

Spec.
600V secondary B+
250VCT secondary low B+/bias
117V primary
6.3 filament

350W ICAS

Core is an old transformer out of a 500W microwave oven.

Many thanks

Dennis WB3KUM/9

From: "Bob"
Subject: Help winding a transformer

You have to know the flux density and core cross sectional area in order to
calculate turns per volt.

73, Bob K6DDX

Date: Mon, 07 Aug 2000 20:05:40 GMT
From: "Norman Litsche"
Subject: Help winding a transformer

If you are going to use the original primary winding on the microwave
transformer, try winding ten experimental turns over it and see wht voltage
you get. Some calculating will tell you how many turns per volt. If you're
going to strip the core bare, count the primary turns as you take it apart.
#turns/120 will equal turns per volt.

From: jack parr
Subject: Help winding a transformer

I have some data which may help.
If your core is 3.5 sq inches the Turns per volt would be 1.79.
As I do not know what gauge wire you are using etc., I cannot determine if
any particular winding will actually fit in the space given. If your xfmr
is the size of the beast that I have (same source) you will have no trouble
there. If you use the above figures you will get the correct voltages from
your windings
I have done many xfmrs over the years and I developed a program in my
computer to do the calculations. Be advised that the figures the others
gave you MAY be right for THEIR xfmr, but theirs may have a different core
area etc. which changes everything.
If you require a fuller calculation for your winding, please e-mail me
direct at parrfo@sympatico.ca with voltage, current required for each
winding & I will e-mail the results to you asap
Regards
Jack Parr

From: "Harry Lippitz"
Subject: Help winding a transformer

This is a complete subject in itself, and soon to become a dead art! To wind a transformer, there is a formula (that I have forgotten) for calculating the total power capacity of the former/laminations you have. If that is big enough then it is safe to continue.

Calculate the wire size you need for all windings to take the currents (using another formula that I have also forgotten), then using the wire data, calculate how many turns/volt you can have for the former winding area you have. There is a range of flux density that you can assume, if you do not have data for the iron core material you have. You can also check the turns by putting the number back into the formula and checking you have the right former area.

As long as the former winding area is the right size, then you will have the right number of turns/volt. I will see if I can bring the data to work tomorrow and give you the info and formulas and tables you need. I have wound loads of transformers and all "run cold", but in the meantime you can take your laminations and clean/laquer them so they are insulated from each other when you assemble the former again. One of the big problems with re-using transformer cores is the eddy currents caused by laminations shorting together. This is one of the main causes of the transformer buzzing and getting hot.

If you wish, I will see if I can scan my lab book and e-mail you the pages, but it is all hand-written. No promises; I am rather busy at the moment having just moved house. When you buy a house, you don't buy a home, but another full-time job!

From: "Terry Perdue"
Subject: New blank Heath front panels

I happen to have three new unpunched and unpainted aluminum front panels that, when punched, painted, and silkscreened, became the front panels on many Heath products. They measure 8.5" by 13". The IT-17 Tube Tester is just one of many kits (the only one I happen to have) that used this panel.

If anyone has a kit they're restoring that has a bent or dented front panel, and hasn't been able to find a parts rig, this could be a solution. Alternatively, it could turn a discarded cabinet into a homebrew 'one-of-a-kind' Heathkit!

$10 each, or all three for $25.

From: jimmoci@aol.com (Jim Moci)
Subject: ~~FS:JOHNSON 500~~

For Sale: Johnson 500 RF deck & original Johnson Manual. No PS/Modulator. Case
was glass beaded, powder coated and is ready for Johnson Maroon paint. Front is
in OK shape. Has scratches around edges and some scratches on front. Nothing
obscene though. All knobs are there but a couple are missing white pointers.
The deck appears totally stock except the clipper circuit looks like it was
bypassed for better fidelity audio. This mod was common on many 500's and
Valiants. I have had it for awhile and hooked it up to a friends 500
PS/Modulator when I bought it and it worked fine. All tubes are good including
4-400 final. I was going to build a killer PS/Modulator for it but too many
projects- not enough time. New motorcycle forces sale. Serious inquiries only-
no trades, no hagglers, no tire kickers. I am not giving it away considering a
500 with PS/Mod sold on Ebay for $2000 awhile back. First $800+ shipping takes
it. You can check it out in person near Philly if you like. Grab it before it
ends up on ebay this weekend.
Thanks for looking!
Jim

From: Mark Holden
Subject: Anyone need anything from Harris?

Hi

I'm interested in ordering a manual from Harris for my RF-550 radio, but
the minimum order is $250, and the manual I need is $137.50.

If anyone out there needs anything from them, perhaps we could pool
together to meet the minimum order requirement.

Subject: Collection for sale

I'm not going to have time to enjoy these boatanchors for years, and I don't have space to work on them or display them properly either. All the Hallicrafters and Hammarlund boat anchors come with schematics / owner's manuals. Most are copies and a few are original.

I'm not setting hard prices, instead I'm asking for offers.

You can see these radios and some info I collected about them on my site at http://markvan.virtualave.net

Hallicrafters S-85
Hallicrafters SX-110
Hammarlund HQ-170
National NC-98
Packard Bell 501
Zenith 6-D-015Z
Radio Shack DX-394
Radio Shack Pro-508
Panasonic RF-1010 portable
Philco 46-350's (two available)
Arvin mystery radio (no idea what model)

If you are interested please email me with an offer.
They are already boxed and ready to go. I am in 91601 zip code, in
North Hollywood CA. My main email is mavn@www.com.

From: "Mark S. Holden"
Subject: Harris rf-550 mini review.

I got my Rf-550 from Radio Esoterica for $695 + Shipping.

I realize it's not for everyone, but it offers a lot of bang for the buck.

It's a 45 pound, 4 space rack mount radio. I think the Osterman book said Uncle Sam paid $13,000 each for them in the late 70's and early 80's.

It's rated at .15mv and has 100db of image rejection. The sync detector will lock onto Radio Pyongyang even when the audio is too weak to hear. It has a coherent AGC setting that reads through a 500hz filter even when you listen at 6khz, so it doesn't get as confused by things like distant lightning strikes.

Radio Tirana sounds like they're in the next town instead of Albania. (BTW, they've recently had music suited to torturing unwelcome guests between 2:30 and 2:58utc.) I seem to be able to tweak just about any signal I find to sound pretty good.

The down side is it has no memories, and the tuning uses up/down carry/borrow toggles for each digit, and to eke the most out of it, you should fine tune the vfo before turning on the sync. But once you get used to it, it only takes a few seconds to switch between any two known frequencies.

If you're familiar with cameras, this is kind of like using an Alpa.

Originally, I intended to keep my R8 for everyday use, and just use the Harris when I was chasing DX, but frankly, the only time I've used the R8 since this arrived was when I went camping. (Compared to the Harris, the R8 is quite portable.)

Here's a URL if you'd like to read more:

http://www.radioesoterica.com/cgi-bin/store/commerce.cgi?product=12

I have no connection with them, other than I bought a radio. There are a few quirks with buying from them, but I think it's because they're a new expansion of an existing business. It took a couple weeks from the day I ordered it until it was shipped, but they were in touch with me regularly, and it was obvious they were using the time to make sure I'd get a radio I'd be happy with. I get the impression the owner (and possibly the only employee) is a european gentleman. (and I stress Gentleman.)

Anyway, if you're the type who doesn't mind, or even enjoys tweaking settings to get incredible reception, this is a fun radio.

By the way, John Reed who sometimes posts here was a valuable source of helpful tips and advice on this radio. Thanks John. :)

Subject: Maybe the braintrust can help.

Greetings all!

Last weekend I was given an old (and I do mean -old-) 6-meter "squalo." I believe it was made by Cushcraft back in the early 1960's, maybe late 1950's.

It appears to be "compleat." Well, using the M2 6-meter loop as an example, there may have been a support running from the center of the loop to near the feed point. I need an builder's guide/ operating instructions to be certain. Cushcraft didn't have it. Neither W7FG nor Sarrio had it.

Anybody got one? I'll graciously repay the person for the xeroxing and the mailing.

Thanks in advance.

Just as you would any tube type radio...or transistor radio...connect 12vdc
to it and turn it on...the vibrator should hum the tubes should light
(except the rectifier which will probably be a 0Z4 gas full wave unit). From
then on out service as any other radio...check voltages (plate etc.) You
should try to get a manual for it, try contacting Wbelsito@aol.com and see
if he has one. Hope that gets ya started.

From: "Bubba"
Subject: Off the subject, but.

Good one!

Actually, I would pull all the tubes out (and mark thier locations) before I would put the power to it.

This is because the filter caps might need to be replaced. The radio probably sat inside the dash fer a long time. Probably got to 150F to 170F in the sun and in a few years those electrolytics filter caps dry out.

Then measure the voltages. If you have a scope - you can look at the ouput voltages and see if there is any hum. But if I were you - I would replace them anyway just to be safe. If they haven't failed yet, there are due.

As for the voltages - most likely - if you find a bunch of 6XXX tubes then it's a 6 V radio - if a bunch of 12XXXX then it's a 12 Volt. (if you find a mixture - 98% time it's a 12 volter)

Also be aware - some cars used a Positive Ground!

Post to:

rec.antiques.radio+phono

and see what they have to say. Be positively sure before you apply the juice! Once you fry something - you'll find it's easier to find parts for the car than it is for the radio.

Good Luck. -B

>operators and can hear them ok sometimes others not good. How
>do I set this control properly and do I have to reset it constantly or
>set it and forget it? Any help appreciated!

The BFO, (which stands for Beat Frequency Oscillator) is only required for CW (Morse code) and SSB (Single Sideband) reception. The front panel control turns it on and off as needed, and the adjustment in the back sets its frequency. Normally, after the set has completely warmed up, you would just tune in any strong AM station for maximum volume, then turn on the BFO and adjust the rear panel control for zero beat. (The point where the whistle frequency goes to zero.) It should then be possible to tune in sideband stations with just the main tuning and bandspread controls. This adjustment is provided because the oscillators do tend to drift a little as the set ages, so you may have to re-adjust that control from time to time. Enjoy your S-38, it's a good starter SWL receiver.

For Sale

Two coaxial connectors for the Collins Radio R390 series.
(I think they were called twinex connectors)

These screw on the back of the receiver antenna RF input.

Part number is UG-421B/U

These are used and have about four inches of coax sticking out of them.
The connectors are in very good shape.

Would like $15 each postage paid and shipped anywhere in the mainland
U.S.A.
Will sell one or both.

Thanks.

Steve

EFJ Viking 1 Looks like new and STOCK on the outside. Cabinet has nice powder coat paint. Has a supercharged HIGH Power PM setup inside and has been rated one of the best sounding HI-FI quality AM rigs out there. Ptt etc. Has VFO with it. It is one of a kind. 650.00 and would prefer pick up in Mass. as I don't think you will want to ship this item. I have pics. and info sheets on the build.
TMC GPR-90 to go with it as a station if your interested or maybe a National NC-183D? your choice. Both Total resto pieces. Talk to me on those as price will depend on if they go with the Viking or not.
So you want to go Vintage and sound like the Channel Master on AM? Here is your chance. No tire kicking please. Thanks folks.

> model, the comparisons won't be very far apart.
>

Absolutely. If you get an SX-100 that hasn't had its tuning cap corrode, it's really pretty stable -- and is really one of the most sensitive radios of the 50s with nice selectable sideband and decent selectable bandwidth (as opposed to the stupid single crystal "filters" with the shape factor of about 30:1 as in contemporary Nationals and Hammarlunds).

Don't get me wrong - I love 'em all. It's just interesting to compare design philosophy amongst the different manufacturers 40 years later, and see which designs held up or actually led the way.

Here are a few observed strengths/weaknesses of the 4 major manufacturers of the 40s-50s:

Collins: Good: beautiful construction, stable, linear tuning. Bad: paint, audio distortion, too conservative of a design (until the -J4/A4)

National: Good: paint, smooth tuning, outstanding tuning caps, very easy to service. Bad: power transformers, image/intermod products, tough/unconventional alignment (just TRY to align a drawer in a HRO 50/60!)

Hallicrafters: Good: innovative design (especially for the money), tuning, fidelity (on the higher grade radios such as the 28, 42, 62, and 88). Bad: knobs, ease of service (ever replace bypass caps in the RF section of a -28?), nasty striped bypass caps, mechanical stability

Hammarlund: Good: mechanical design, stability, ease of service. Bad: paint, ease of service (SP-600 only), *very* conservative design

Hope this starts a flame war. I'm sick of just reading FS/FA ads on this NG!

Don't use the tranny from a microwave unless you can find and remove
the flux shunts. If you do not remove them, the regulation will
positively suck. Ask me, I know. I built a 400w 4CX250 amp based on
a microwave tranny. What a learning experience!!!.

Evan:

What do you really want here? If you are looking to get rid of it, put
it on Ebay and take what you get. The market will dictate price. If you
really want to know what it's worth, go to Ebay. You'll find 2 of them
currently for auction with 4 days to go. One is $280 and looks like a
collector item. The other is $46 and looks like a user. Searching for a
completed auction produces a listing of one that sold for $70 something.
It was a little more cobbled up than yours sounds like. You could have
done this same research, so I ask again what do you really want from the
group?

Gene

Having rebuilt an SX-28 including the RF section, I can appreciate the difficulty, but it's really not that hard if you are methodical. The audio quality in the 28 and the S-37 was remarkable. Few others could compete with that. I'm somewhat prejudiced, having about five Hallicrafters radios, but I think at the time they were great radios for the money. Some hold up still today as solid performers, and the SX-28 is still the most "fun" radio around.

Doug Moore

Subject: Boatanchor Manuals F.S.

I'm cleaning out my library. I have the following COPIES of manuals for sale. Most are bound and are copies of the originals. Payment by Money Order or Cashier's Check only or I will wait until personal check clears.
Please add $3.20 priority mailing for each order.

Hammarlund HQ-170A Operator's Manual.....$15
Heathkit HO-10 Monitor Scope Assembly Manual $10
Instruction Book For Collins Radio Receiver R-391/URR....$10
Instruction Book For Collins 75S-1 Receiver.....$10
Instruction Book For Collins 75A-4 Receiver.....$20
Drake T-4XB/T-4 Reciter Instruction Manual.....$10
Drake 2-C Receiver Instruction Manual.....$10
Drake T-4XC Transmitter Instruction Manual.....$10
Kenwood R-5000 Instruction Manual.....$10
Kenwood TS-450S/690S Service Manual.....$20
RME 6900 Operator's Manual.....$10
Hallicrafters SX-101A Operating and Service Instructions.....$10
National NC-155 Receiver Instruction Manual.....$10

If interested, please email privately.....w5lx@flash.net
Thanks.

FYI, in your auction copy, you mention the radio receives AM with
synchronious detection. I have the same radio. This model has no
synchronious detection. The fade on distant AM stations can be rather
severe.

Subject: FS Collins R390 Connector

For Sale

Two coaxial connectors for the Collins Radio R390 series.
(I think they were called twinex connectors)

These screw on the back of the receiver antenna RF input.

Part number is UG-421B/U

These are used and have about four inches of coax sticking out of them.
The connectors are in very good shape.

Would like $15 each postage paid and shipped anywhere in the mainland
U.S.A.
Will sell one or both.

Thanks.

Steve

> model, the comparisons won't be very far apart.
>

Absolutely. If you get an SX-100 that hasn't had its tuning cap corrode,
it's really pretty stable -- and is really one of the most sensitive radios
of the 50s with nice selectable sideband and decent selectable bandwidth (as
opposed to the stupid single crystal "filters" with the shape factor of
about 30:1 as in contemporary Nationals and Hammarlunds).

Don't get me wrong - I love 'em all. It's just interesting to compare
design philosophy amongst the different manufacturers 40 years later, and
see which designs held up or actually led the way.

Here are a few observed strengths/weaknesses of the 4 major manufacturers of
the 40s-50s:

Collins: Good: beautiful construction, stable, linear tuning. Bad: paint,
audio distortion, too conservative of a design (until the -J4/A4)

National: Good: paint, smooth tuning, outstanding tuning caps, very easy to service. Bad: power transformers, image/intermod products, tough/unconventional alignment (just TRY to align a drawer in a HRO 50/60!)

Hallicrafters: Good: innovative design (especially for the money), tuning, fidelity (on the higher grade radios such as the 28, 42, 62, and 88). Bad: knobs, ease of service (ever replace bypass caps in the RF section of a -28?), nasty striped bypass caps, mechanical stability

Hammarlund: Good: mechanical design, stability, ease of service. Bad: paint, ease of service (SP-600 only), *very* conservative design

Hope this starts a flame war. I'm sick of just reading FS/FA ads on this NG!

73 John

> > SX-100?

Yup! It was, as were almost all, of the Halicrafters of that era, a gereral coverage receiver that had band edge marks on one dial and the band spread on the other dial.

Considering the era they were a pretty good receiver. Actually they were some of the better generally available receivers of the time. They sure don't stand up well compared to todays stuff though <:-))

At one time they had the SX-100, HT32 and HT-32 (not A or B) in a console. I think this was around 1960-62.

Certainly if you had the money the 75A series were better (As I recall they were available about the same time)

But, get the prices down! I'm trying to collect the whole series of an SX115, HT-32B and HT33B <:-))

Subject: Hallicrafters s-38e BFO tuning question

I have acquired at a yard sale this weekend an almost mint conditon
s-38e with original tubes and it works perfectly for $10. I have cleaned
it up and do not have a manual for it so I am wondering how to I use
the variable BFO knob on the back of it? I have received some ham
operators and can hear them ok sometimes others not good. How
do I set this control properly and do I have to reset it constantly or
set it and forget it? Any help appreciated!

The BFO, (which stands for Beat Frequency Oscillator) is only required for CW
(Morse code) and SSB (Single Sideband) reception. The front panel control turns
it on and off as needed, and the adjustment in the back sets its frequency.
Normally, after the set has completely warmed up, you would just tune in any
strong AM station for maximum volume, then turn on the BFO and adjust the rear
panel control for zero beat. (The point where the whistle frequency goes to
zero.) It should then be possible to tune in sideband stations with just the
main tuning and bandspread controls. This adjustment is provided because the
oscillators do tend to drift a little as the set ages, so you may have to
re-adjust that control from time to time. Enjoy your S-38, it's a good starter
SWL receiver.

Don't use the tranny from a microwave unless you can find and remove
the flux shunts. If you do not remove them, the regulation will
positively suck. Ask me, I know. I built a 400w 4CX250 amp based on
a microwave tranny. What a learning experience!!!.

Subject: Value of Johnson Matchbox? "7" rating?

Thinking of putting a Johnson Matchbox, the KW style, with the SWR coupler, up for sale or on Ebay. This one is ok inside but the cosmetics leave something to be desired. Outside knobs are fine, meter looks fine, but their is a flaw. The holes for the switch and pot for the SWR adjustments were enlarged for some reason and you can see a slight gap around the washers. Also, there were four holes drilled in the front panel, and a nut and bolt inserted in each, not sure why; holes are approximately on a diagonal from each meter corner and maybe 3/8 inch away. So I'd give the outside about a rating of "7". Don't see these for sale too often and wonder what the concensus is about the value of such an item. Not sure why people do this to gear but it is their right, much to others' disappointment.

I removed mine, they look like a stack of "I" cores used as fillers between the "stacks" of coil windings. I am winding the transformer the old way with the windings layered on top of each other instead of each winding seperately sliped over the core. I will also be reversing the direction of each set of lams instead of placing them all in the same direction.

From: "Dave"
Subject: FS: Gonset GSB-100 for restore or parts rig...

Hello all,

I have for sale a pretty decent GSB-100 that's either a great parts
set or could be restored.

The face is EXCELLENT. All the knobs are there and appear to be
original, the dial drum is in good shape (needs restringing), the meter is
there as well as the logo. The power transformer appears to be the only
critical component missing - it has a 3-cable harness extending out from
the rear of the chassis with an octal plug that was used to run it from
an external supply (which I don't have). There's a large choke hashed onto
the chassis top, but it doesn't appear that the chassis has been hacked into
at all. No extra holes in the chassis or face. Most of the tubes are
there.
Appears to be missing the single final tube (these rigs only had 1 final
tube)
and the rectifier. The rest of them are there. It has the bottom chassis
shell but is lacking the top.

Price is $100 plus shipping from Tacoma, WA. Local pickup would be
great, or I can drive up to 50 miles in any direction to meet someone.

I hate to part this rig out, so I won't be fielding any parts requests.
There
is just too much good here to trash completely.

I have several JPEG's available to serious requests.

Thanks to all,

Dave WB7AWK

From: "Dave"
Subject: FS: Henry Radio Tempo One - restore or parts rig $35

For sale:

Silver face Henry Tempo One SSB rig. Face is nice - still
has remnants of 'remove protective film' plastic that the original
owner didn't bother to completely remove. Rather rough rig -
missing the tubes and the chassis bottom. But it's otherwise
all there and could be restored. Or use as a parts rig. NO
power supply.

I acquired it to build a 30 meter monobander a few years ago,
but just never got to it.

I ran this some time back and it sold instantly, with 2 or 3 backup
buyers. I have since been leveled by that blasted KAK virus and
lost all my emails, so if you are one of the backups and still want it,
drop me a note.

I have jpeg photos available. I also think I have a copy of the schematic.

Thanks to all,

Dave WB7AWK

Subject: Hallicrafter AMP help needed

Ok picked up a Hallicrafters HT33B amplifier. It needed work as their is a
short in the power supply section. Well I found one of the oil caps went bad so
I replaced it, (took quite some time to find a replacement, I might add), well
I powered it up an lo and behold it tripped the circuit breaker on the unit.
Any one have any experience with this unit??? I am getting ready to toss this
Hallicrafters in the Hudson River. I am sure it is something I have overlooked,
any hints or suggestions would greatly be welcomed.

Subject: Harris rf-550 mini review.

re the "yikes" on the 137 for a manual...LOL....Harris radio gear is / was big bucks....used to install / use and maintain some of it - low end HF transceiver would be about 12000 back about 12-14 years ago (Canadian I think which was on par then). Accessories would scare ya as a ham. The manual, however.....ANY manual from Harris (that I've seen - quite a lot) would be a top notch piece of writing.....well written, accurate, not likely ambiguous and a virtual course in the item under discussion. Often they had (my experience was mostly 80's and early 90's vintage) detailed data sheets on various discrete components in the back....As a sparker at sea it was a joy to have on the shelf - and as an installation tech an invaluable asset - no guessing on connectors or numbering conventions (Ken/Yae/Ico take heed!)

>
> 73
> Alan
> W1HYV

Alan: I think he's right many (well most North American) cars back then were 6 volt. 12 volts was a European thing.

A suggested procedure.

1) Pull out the vibrator, they were usually a 4 pin can that looked like a big plug in electrolytic. I may even have a spare somewhere! A few were 6 pin (synchronous vibrators).
2) Plug it in to 6 volts; it will take about 0.3 amps times the number of tubes that would be roughly be 2 to 3 amps.
3) Check that tubes light up. Does on/off switch work etc.
If all OK so far?
4) Then rig up your voltmeter on 300 volt scale to the HT (B+) line that comes out of the secondary of the vibrator power supply transformer section to feed the plates of the tubes through the various circuits. You'll probably find it on the pin of one of the electrolytic smoothing capacitors. Between it and the chassis. (I believe the chassis was usually at ground potential; although there were some European sets that were arranged for cars with the positive battery terminal to to ground, however they were AFIK, all 12 volt European sets and often had other wavebands, such as 'Long Wave'); so it's 99% certain the chassis/case is the negative).
5) Plug in the vibrator momentarily; it should hum or buzz. If it doesn't hum the vibrator is faulty (occasionally you could shake or knock them into activity, at least temporarily). Also even if it does 'buzz' it may have bad switching contacts; I've never opened one that I can recall but there are presumably big contacts inside to switch the 6 volts back and forth into the vibrator transformer. The transformer steps up the 6 volts to B+ voltage.
6) As you plug in the vibrator the current from the 6 volt supply, or 6 volt battery, whatever you are using should increase. (The tubes will already be warmed up and ready to take B+ current, at this stage) I don't have a number but it would probably be of the order of, say, another 3 amps? (This is because the tube plates etc. operating at around 150 volts probably consume, say 150 milliamps; so at 6 volts including the inefficiencies of the vibrator circuit that would be 3 amps or a little more? Cos. the vibrator itself takes some current also.
7) If it does hum steadily, quickly measure the voltage as in (4). It will probably be anywhere from 150 to 250 volts, I think?
8) If it does not; quickly switch off and get a circuit and trouble shoot

from the 6 volt input inwards.
9) If you start to suspect the B+ system you could temporarily disconnect it and trouble shoot for a bad capacitor to chassis etc. After 48 years some capacitors leak!
10) Bringing up the 6 volts gradually won't help; the tubes need close to 6 volts to heat properly. I suppose you could put a full 6 volts on the tube heaters and disconnecting the input to the vibrator circuit bring that up gradually. But I suspect that the vibrator will need at least 4 volts to get it's buzz started! So it won't prove much I think.
11) If all the above checks OK you may have a bad tube, or a weak one (typically the freq. changer often a 6K8 or later or similar version) which won't oscillate. You can test tubes.
12) Or, there may be circuit problem such as an open IF can, faulty capacitor to grid of the audio output or a number of other possibilities.
Have fun!
Corrections or better ideas on any of this by anyone are welcomed.?

Terry S.

I have a bunch of 80m and 40m crystals to sell or trade.
They are all usable amateur frequencies, mostly on CW.
For sale as priced, or trade 1-for-1 for other freq's
that I can use (email me with what you have).

Here's the link...

Collins military stuff like R388, 51J(X), yes. Amateur radio like
the 75A or 75S series, no. It's probably a 19" aftermarket cabinet
if military.

That weld is the flux shunt. Look for single turn copper bands or wire, usually 180 deg. apart surrounding the core. If you can break these off, your O.K. Also a hidden shunt is through bolts in the laminations that do NOT have insulating washers, these bolts will also shunt current and increase primary current and add heat. The micro tranny may be stacked as separate "I" "E", interleave them for your project. They have flux shunts to keep the external magnetic field low, else transduce into the metal cabinet! Heat the cabinet and hum like hell.

Charlie
WA1JFD

P.S. Just what are you looking for output from your home made transformer? A Ham Fleamarket is coming up in my area and may yield some good junque?

> > SX-100?

Yup! It was, as were almost all, of the Halicrafters of that era, a gereral
coverage receiver that had band edge marks on one dial and the band spread
on the other dial.

Considering the era they were a pretty good receiver. Actually they were
some of the better generally available receivers of the time. They sure
don't stand up well compared to todays stuff though <:-))

At one time they had the SX-100, HT32 and HT-32 (not A or B) in a console.
I think this was around 1960-62.

Certainly if you had the money the 75A series were better (As I recall they
were available about the same time)

But, get the prices down! I'm trying to collect the whole series of an
SX115, HT-32B and HT33B <:-))

372. Value of Johnson Matchbox? "7" rating?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-09 00:00:00 UTC
From: k9sqg@aol.com
Message-ID: <20000808220940.16058.00000181@ng-fz1.aol.com>
Source record: 63093

Thinking of putting a Johnson Matchbox, the KW style, with the SWR coupler, up for sale or on Ebay. This one is ok inside but the cosmetics leave something to be desired. Outside knobs are fine, meter looks fine, but their is a flaw. The holes for the switch and pot for the SWR adjustments were enlarged for some reason and you can see a slight gap around the washers. Also, there were four holes drilled in the front panel, and a nut and bolt inserted in each, not sure why; holes are approximately on a diagonal from each meter corner and maybe 3/8 inch away. So I'd give the outside about a rating of "7". Don't see these for sale too often and wonder what the concensus is about the value of such an item. Not sure why people do this to gear but it is their right, much to others' disappointment.

Check your turns counting for the 500V winding. I think you're short a few
turns (e.g., It'll be a 250V winding with the turns you have.).

Dave

John,

The SX-73 wins hands down. Whereas the HQ-110 was designed and sold as a low-middle range amateur receiver, the SX-73 is a serious, professional receiver that was designed as a functional equivalent of the Hammarlund SP-600 and was contracted by the military as a second source R-274D. That was the military designation for the SP-600 also. The SX-73 is more selective, more sensitive and more immune to front-end overload than the SX-110. Compare the prices of the two when they were sold new. You could buy about 6 HQ-110's for the price of one SX-73! The only drawback of the SX-73 in amateur use is the lack of bandspread for the amateur bands. This can be easily overcome by careful tuning and getting used to using a general coverage receiver on the ham bands. I once owned an HQ-110 and I replaced it with an HQ-170A which is really high quality ham band only receiver. I have an SX-73 and an SP-600, together with another 40 or so amateur bands only and professional and military general coverage receivers. The SX-73 and SP-600 are among my favorite professional receivers and the HQ-170A is one of my ham band only favorites. I use all my receivers with various transmitters on the amateur band on a rotational basis: I use each radio for an certain amount of time and then it goes back on the "standby" shelf. The SX-73 and the HQ-170A are permanently on my active equipment roster.
The SX-110 is not a bad receiver when its properly tuned up - it's just not in the same league with the SX-73.

382. Trio TS530SP problems

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-10 00:00:00 UTC
From: Hobnail <merryprankster@cwcom.net>
Message-ID: <nGDk5.787$nX5.23534@news1-hme0>
Source record: 62853

Hello Group my first post its a bigie. I have got a Trio TS 530SP I swapped it for my 2 UHF / VHF band handheld when I got the H.F. licence. I got the rig and was told that the Valves / Tubes just needed neutralising. I plugged in the set and the tubes glowed really bright and things where not right. I sent the set to be fixed. There was problems with four resisters and a diode or 2 on the rectifier board. Well all has been well for about 3 weeks until 2 days ago when a bucket sized plume of smoke came out the back of the set whilst I was in QSO on 40 meters. I pulled the plug and let it cool down. Then gingerly put it back in to see if receive was OK, it was so. I put the heaters on and no nasty things happened but the power had dropped down to 10 watts max. I took of the case and started to delve into the finals where the smell was . On opening the box I noticed the 150uf ceramic choke? The white one in-between the tubes was burned out, all the enamel had dripped / dropped to the bottom of the coil in a sticky mess. The capacitor a .001pf had cracked open and a couple of joining wires where heat damaged. Well I have rewound onto the choke the same amount of turns I took of and replaced the cap and the set is working ... But the tube furthest away from the fan is glowing much brighter than the front one. The power is about 80 watts full on, when before it was around 120'ish. Has any one got some suggestions where to look next? I think this 1 tube brighter than the other thing might be in the rectifier, but am not sure where to look on the board. Any help very welcome.. From Bob M5BOB N/West UK

Sound like my experiance with a KnightKit T-175 Linear.

Replace both "Z" units, the coil over the 2W resistor. This way you know they are both correct and 2W resistos are not that expensive. I would also replace both finals, I know very expensive. Next check the cathode bias resistor, I had a T-399 (not a mistype) that this failed and caused some interesting results. Reset the grid bias and renuetralize, if possible, borrow a spectrum analyzer to do this. At the same time check the voltages on all the pins on both tubes, they sould be the same in within tolerance.

384. WTB: Basic Theory & Applications of Electron Tubes

Joe: In 1956 we used brand new H.P. audio oscillators and if you had asked me I would have said ours were "200CD" type. I think I'm correct in recalling that. They were more compact than the one shown on ebay. About half the width; vented case with rounded corners and a carrying handle on top; I recall that the oscillator tube or tubes were 6SN7s? And I seem to recall ours had a metal rectifier tube, possibly a 5Z3 and an output tube, but not sure. I believe there was a also rack mounted version. Somewhere in my junk I have a spare three (or is it four?) section tuning capacitor and spare audio feedback transformer. Memory doesn't serve me well regarding frquency range (maybe up to 100 000 cycles?), because I recall measuring at carrier frequencies well above 10 000.
I think our companion AC VTVM was a 400D? Also portable.
Having said all this I get the impression the unit on ebay is of mid late 1940s vintage.It's style of construction is reminiscent of the equipment we used but is, (for want of a better word), 'cruder'.
The manual appears to be of identical appearance to the ones we used.
My best guess. Any help?
Terry S. Newfoundland, Canada.
PS. I just acquired a HP 606B. Seems to work well but no manual!

A transformer out of an old AC tube type TV would probably be suitable? Most likely be 300-0-300 or something close and have 5 volt and 6.3 volt windings. Have to check physical size/space.
Suggestion.

Grounded out all the welds with a grinding stone and seperated all the E/I lams. Lost a few on each end Built a wooden form to wind all the new primary and secondaries. No, this is a good wind (excuse the pun) down project after work. I could just buy a used HeathKit HP-23 power supply for about $50.00. Building a small 6 meter linear with S2001/6146/8298 finals so I need +820V, +300V, -50V DC and 6.3V AC. The transformer I am winding orginally had 1 wrap per volt, I am considering 2 wraps per volt so the transformer should work out like this.

1200VCT 2400 wraps 26ga
500VCT 500 wraps 28ga
117V 234 wraps 20ga
100V 200 wraps 28ga
6.3V 12.5-13 wraps 16ga

Transformer was orginally out of a 650W microwave oven. Current plan is 2 6146W but I should be able to support up to 4 arranged in a semi circle so I can keep the lead length down between the tube and the tuning cap. A local electornics store also has some 12V 5A transformers wraped around a T-520 toriod core I was going to use as a choke input to the filters caps. Should provide a few heneries of inductance.

Thanks for the offer

Dennis WB3KUM/9

Joe: In 1956 we used brand new H.P. audio oscillators and if you had asked me I
would have said ours were "200CD" type. I think I'm correct in recalling that.
They were more compact than the one shown on ebay. About half the width;
vented case with rounded corners and a carrying handle on top; I recall that
the oscillator tube or tubes were 6SN7s? And I seem to recall ours had a metal
rectifier tube, possibly a 5Z3 and an output tube, but not sure. I believe
there was a also rack mounted version. Somewhere in my junk I have a spare

three (or is it four?) section tuning capacitor and spare audio feedback transformer. Memory doesn't serve me well regarding frquency range (maybe up to 100 000 cycles?), because I recall measuring at carrier frequencies well above 10 000.
I think our companion AC VTVM was a 400D? Also portable.
Having said all this I get the impression the unit on ebay is of mid late 1940s vintage.It's style of construction is reminiscent of the equipment we used but is, (for want of a better word), 'cruder'.
The manual appears to be of identical appearance to the ones we used.
My best guess. Any help?
Terry S. Newfoundland, Canada.
PS. I just acquired a HP 606B. Seems to work well but no manual!

Having rebuilt an SX-28 including the RF section, I can appreciate the
difficulty, but it's really not that hard if you are methodical. The audio

quality in the 28 and the S-37 was remarkable. Few others could compete with that. I'm somewhat prejudiced, having about five Hallicrafters radios, but I think at the time they were great radios for the money. Some hold up still today as solid performers, and the SX-28 is still the most "fun" radio around.

Aren't microwave oven transformer a pain! They weld these together now. I originally remember this would have been a no-no since these were suppose to be insulated from each other.

Date: Wed, 09 Aug 2000 23:48:58 GMT
From: Charles Days
Subject: Help winding a transformer

That weld is the flux shunt. Look for single turn copper bands or wire, usually 180 deg. apart surrounding the core. If you can break these off, your O.K. Also a hidden shunt is through bolts in the laminations that do NOT have insulating washers, these bolts will also shunt current and increase primary current and add heat. The micro tranny may be stacked as separate "I" "E", interleave them for your project. They have flux shunts to keep the external magnetic field low, else transduce into the metal cabinet! Heat the cabinet and hum like hell.

Charlie
WA1JFD

P.S. Just what are you looking for output from your home made transformer? A Ham Fleamarket is coming up in my area and may yield some good junque?

Evan:

What do you really want here? If you are looking to get rid of it, put
it on Ebay and take what you get. The market will dictate price. If you
really want to know what it's worth, go to Ebay. You'll find 2 of them
currently for auction with 4 days to go. One is $280 and looks like a
collector item. The other is $46 and looks like a user. Searching for a
completed auction produces a listing of one that sold for $70 something.
It was a little more cobbled up than yours sounds like. You could have
done this same research, so I ask again what do you really want from the
group?

A transformer out of an old AC tube type TV would probably be suitable? Most
likely be 300-0-300 or something close and have 5 volt and 6.3 volt
windings. Have to check physical size/space.
Suggestion.

Source record: 62979

Here's a question for everybody.
I've run a Hammarlund HQ-110 for about 15 years now. It's always been a good rig, but it's starting to get senile (hum, wobbly sigs, microphonic, etc) and needs a good benching. I have in storage a Hallicrafters SX-73 <mil R-274D> that worked well when I put it in storage 2 years ago. Thanks to BAMA, I have the manual for the SX-73, so I can give it a going-thru.
Question is, how would you all rate the Halli vs. the Hammar as to selectivity, sensitivity, all that good stuff? My primary use for it will be on CW, with some side trips into AM land.

what'dya think?

Outstanding HQ-160 receiver. In EXCELLENT condition
cosmetically and electrically. This was obtained from the original
owner who took excellent care of it. No modifications. Full sensitivity
on all bands. I checked it with my HP 8640 and the S meter reads S-9
for 50 microvolts input on all bands. The S meter is quite accurate,
each S unit is 5 db and stepping through output voltage level ranges on
the signal generator, 10dB is 10 dB of the meter! I haven't seen a
receiver that good before. I checked all tubes on my Hickock
539 and did not need to replace any.This is the best HQ-160 I've seen
and you will not be disappointed! Comes with manual. $395 plus actual
shipping, double boxing is free. CONUS

Have for sale a National NCX-5 with original power supply and manual, some tech notes, and some spare final tubes. Also has all 10-meter crystals installed. Cosmetics are good, one bright missing on tuning knob. Works but could use a good tune-up. Asking $200 plus shipping from zip 61745.

Bob,

That NRD-525 might possibly have a synchronous detector in it. A company in Sweden made a very nice sync detector board for those radios. I have one in my 525 and the improvement is nothing short of amazing.

The board plugs into the slot normally taken by one of the VHF converter boards (to get power, etc.) and is wired into the IF board for signal and to return the audio.

Don't have the paperwork handy right now, but if you or anyone else wants details on this, drop me a note and I'll post the details to the newsgroup or send them via email.

426. What to do with old stuff

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-11 00:00:00 UTC
From: jwodell@ameritech.net
Message-ID: <3994e73f.1927995@news.det.ameritech.net>
Source record: 62880

Over the years I have collected a whole bunch of old,
real boatanchors. Things like a DX-40, Drake 2B,
many old transceivers, HQ170, and so on.

Quite frankly, I don't see how I can sell those things,
honestly, for more than $100. Most have minor
eccentricities.

But for $100, it simply isn't worth packing them up
and shipping them. So they sit there. Same problem
with giving them away. I'd still have to ship them.

I ask on the local nets for people who would like them
really cheaply, and nuttin. The new hams, of course,
have never heard of tubes, and would kill themselves
on the HV.

I suspect I'm going to through them out! Seems a pity.

Subject: Comparing Receivers

Here's a question for everybody.
I've run a Hammarlund HQ-110 for about 15 years now. It's always been a good rig, but it's starting to get senile (hum, wobbly sigs, microphonic, etc) and needs a good benching. I have in storage a Hallicrafters SX-73 that worked well when I put it in storage 2 years ago. Thanks to BAMA, I have the manual for the SX-73, so I can give it a going-thru.
Question is, how would you all rate the Halli vs. the Hammar as to selectivity, sensitivity, all that good stuff? My primary use for it will be on CW, with some side trips into AM land.

what'dya think?

73 and ZUT

>severe.

Bob,

That NRD-525 might possibly have a synchronous detector in it. A company in Sweden made a very nice sync detector board for those radios. I have one in my 525 and the improvement is nothing short of amazing.

The board plugs into the slot normally taken by one of the VHF converter boards (to get power, etc.) and is wired into the IF board for signal and to return the audio.

Don't have the paperwork handy right now, but if you or anyone else wants details on this, drop me a note and I'll post the details to the newsgroup or send them via email.

From: "Chuck O'Neal"
Subject: FS: Hammarlund HQ-160

Outstanding HQ-160 receiver. In EXCELLENT condition
cosmetically and electrically. This was obtained from the original
owner who took excellent care of it. No modifications. Full sensitivity
on all bands. I checked it with my HP 8640 and the S meter reads S-9
for 50 microvolts input on all bands. The S meter is quite accurate,
each S unit is 5 db and stepping through output voltage level ranges on
the signal generator, 10dB is 10 dB of the meter! I haven't seen a
receiver that good before. I checked all tubes on my Hickock
539 and did not need to replace any.This is the best HQ-160 I've seen
and you will not be disappointed! Comes with manual. $395 plus actual
shipping, double boxing is free. CONUS

From: WB3KUM/9
Subject: Help winding a transformer

Grounded out all the welds with a grinding stone and seperated all the E/I lams.
Lost a few on each end Built a wooden form to wind all the new primary and
secondaries. No, this is a good wind (excuse the pun) down project after work. I
could just buy a used HeathKit HP-23 power supply for about $50.00. Building a
small 6 meter linear with S2001/6146/8298 finals so I need +820V, +300V, -50V DC and
6.3V AC. The transformer I am winding orginally had 1 wrap per volt, I am
considering 2 wraps per volt so the transformer should work out like this.

1200VCT 2400 wraps 26ga
500VCT 500 wraps 28ga
117V 234 wraps 20ga
100V 200 wraps 28ga
6.3V 12.5-13 wraps 16ga

Transformer was orginally out of a 650W microwave oven. Current plan is 2 6146W but
I should be able to support up to 4 arranged in a semi circle so I can keep the lead
length down between the tube and the tuning cap. A local electornics store also has
some 12V 5A transformers wraped around a T-520 toriod core I was going to use as a
choke input to the filters caps. Should provide a few heneries of inductance.

Thanks for the offer

Check your turns counting for the 500V winding. I think you're short a few
turns (e.g., It'll be a 250V winding with the turns you have.).

Dave

P.S. Standard Disclaimer: I work for them, but I don't speak for them.

Subject: Trio TS530SP problems

Hello Group my first post its a bigie. I have got a Trio TS 530SP I swapped it for my 2 UHF / VHF band handheld when I got the H.F. licence. I got the rig and was told that the Valves / Tubes just needed neutralising. I plugged in the set and the tubes glowed really bright and things where not right. I sent the set to be fixed. There was problems with four resisters and a diode or 2 on the rectifier board. Well all has been well for about 3 weeks until 2 days ago when a bucket sized plume of smoke came out the back of the set whilst I was in QSO on 40 meters. I pulled the plug and let it cool down. Then gingerly put it back in to see if receive was OK, it was so. I put the

heaters on and no nasty things happened but the power had dropped down to 10 watts max. I took of the case and started to delve into the finals where the smell was . On opening the box I noticed the 150uf ceramic choke? The white one in-between the tubes was burned out, all the enamel had dripped / dropped to the bottom of the coil in a sticky mess. The capacitor a .001pf had cracked open and a couple of joining wires where heat damaged. Well I have rewound onto the choke the same amount of turns I took of and replaced the cap and the set is working ... But the tube furthest away from the fan is glowing much brighter than the front one. The power is about 80 watts full on, when before it was around 120'ish. Has any one got some suggestions where to look next? I think this 1 tube brighter than the other thing might be in the rectifier, but am not sure where to look on the board. Any help very welcome.. From: WB3KUM/9
Subject: Trio TS530SP problems

Sound like my experiance with a KnightKit T-175 Linear.

Replace both "Z" units, the coil over the 2W resistor. This way you know they are both correct and 2W resistos are not that expensive. I would also replace both finals, I know very expensive. Next check the cathode bias resistor, I had a T-399 (not a mistype) that this failed and caused some interesting results. Reset the grid bias and renuetralize, if possible, borrow a spectrum analyzer to do this. At the same time check the voltages on all the pins on both tubes, they sould be the same in within tolerance.

I feel your pain. Where are you located Jerry? Maybe I can send someone over to take 'em off your hands.

I run an all vacuum-tube station on HF, and have a small collection of restored Hallicrafters receivers. I wanted to be sure these wouldn't end up in the dumpster or on E-bay when I passed away, so I searched for some younger person who would have an interest in such things, so that I could specify them in my will. I had a really hard time finding anyone. It's become a "plug and play" world, but there are still a few curious souls about, who respect what has gone before.

Source record: 62884

Hi Lew:

I am interested in the HRO without the meter. I believe that would be the HRO Jr. I do not know what the prices will be, and it may be out of my league. I have been asked to assist in making a old radio station for the museum that houses the Hughes Spruce Goose. Since Hughes was an amateur in his early years, he appreciated the ability to communicate that hams had, and when he set up his round the world flight, he used hams exclusively. Although we are still negotiating, the HRO would be perfect for a period ham station. The museum may still decide to use a ham station from the Viet Nam era, since it is a memorial to a son who fought there (but died in a car wreck years later). If they are ready to commit now, it could be donated to a charitable organization. Or, I could buy it now and either loan it or keep it if they decide not to use that era. Have always wanted one anyway. However, the market price may be more than I want to pay.

If the transmitter is reasonably compact and has a clean, amateur look to it, that would also be interesting for a period station. Would like to get photos of that and how much you are expecting for it.

Thank you for your assistance. 73, Colin Lamb, K7FM

I first got interested in radio when things glowed. My first non breadboard radio was a Knight Space Spanner (if you happen to have one of those, I'll buy it from you) hooked up to a 40m folded dipole on the roof. I used to ride my bicycle to Henry Radio when they were on Olympic Blvd in West LA. I would lust after the stuff in the piles of used equipment then spend a buck for a CK-722 or other part and ride home. I happened to be in LA on business a few years ago and dropped by the Henry Radio store on Bundy. With all respect to the Henry brothers, it just aint the same!

25 years later I finally got my ticket and like most, bought the state of the art solid state stuff. Now after having been a ham for over 15 years I got the bug for a piece of history. I bought a pair of Drake Twins. Haven't tried the xmtr yet, but the rcvr needs work. Unlike my solid state stuff, when I pulled the cover and saw all those discrete parts with leads and lots of room for my stubby fingers, I said to myself: "I can do this!"

Don't dump those pieces of history. Take one of the rigs to a place like Mail Box's Etc. and find out what they will charge you to package and ship it to CA or FL. Establish this as a standard packaging fee and offer your stuff on the web. Big, heavy items would have to be handled

differently, but if somebody is interested, they'll pay. I'd like to see the list.

Good luck

Gene,
N4JEE

Hello Jerry, love your call.

I am surprised that there are no takers for you equipment. If you are going to give them away I would even consider driving all the way from the far side of Chicago, there has to be others. I sure there has to be some interested people in the Detroit area that would be willing to buy them on a pick-up only basis. Have you tried some of the collector or other non-ham radio groups, a local news paper or local AM radio swap shop. Also, see if there is a local museum that would be willing to take them. When I went through the Ford Museum last year they had a nice display of "homes" of the period with period items.

Please, before you throw them out, let me or post it up on the internet. I may not keep everything, but I am sure I will at least some. But I am NOT interested in making money on this, just ask my wife. If you want to place a limitation of no E-Bay sales, this would be fine. I enjoy fixing older radios and I would also like to see them find a good home. My father-in-law, WA3WZX, I just clued him in someone who was looking for some old earily 1950's Link VHF equipment. His base 6 meter FM tranciever is now sitting in a race car museum in Fl. I am sure just with this posting you will get a bunch of responces.

Subject: *** AIR FRANCE CONCORD UPDATE ***

It took them eighty years since World War I, but
the French finally figured out how to kill Germans.

New Concorde schedules from Air France:-

Depart Paris CDG 1700
Arrive Hotel Gonesse 1703

Q.) What would the captain of the plane be doing today if he hadn't
been killed?

A.) Scratching weakly at the inside of his body bag.

Wealthy German tourists love the Hotel Gonesse. They drop in all the
time.

Q.) How many wealthy German tourists can fit into a VW Bug?

A.) 100. Four in the seats, 96 in the ashtray.

From: Bucky <jbgeer@swbell.net>

Subject: Dallas 1st Saturday Sale

I saw a few boatanchors at the First Saturday Sale at ECI in Dallas this morning...seems to be a renewed interest in getting this Sale started up again...use to be great fun. Were probably 15-17 radio venders in the ECI parking lot, and 80-100 computer venders across the street. Saw some Hallicrafters, Hammarlund, and Nationals as well as antique battery rigs.

Subject: FS:Collins 208U-3 3 KW HF RF Amplifier with 671B-1 Receiver/Exciter

Collins 208U-3 2-30Mhz RF Amplifier 3 KW in
good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single
4CX3000A to produce 3 KW PEP or average power with only
0.2 watts of input drive.

These are automatically tuned with a servo system that takes about
10 seconds to tuneup.

Primary power input is 200-250VAC, 3Ph, 47-60Hz.

Net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would
make a great addition to your station.

I am offering this unit two way as follows:

untested less the 4CX3000A Tube at $3,000. unpacked or

with a Guaranteed 4CX3000A final tubes at $4,000

Crating by a professional packer is $250.00 additional.

A complete service manual is included at no charge.

A Collins 671B-1 Receiver/ Exciter is designed for use with the
208U-3 is in stock at $1,500 in good condition sold only at this price
with a 208U-3.

We stock a complete line of Collins URG-1 (universal Radio group)
major components and manuals.

There are complete specifications and photo of this item on our web site
in the HF section.

This is commercial/military quality gear for those that like to tinker
with military equipment.

Prices are FOB Somis, CA

Our web site has complete specifications on the 208U-3 in

the HF section. http://www.columbiaelectronics.com

Visit our revised web site for our latest availability listings of
military radios!

Our site now has complete specifications on some of the most popular
military radios and more to come.

If you need manuals on military radios or military test sets we can
supply professionally done photo copies. No pasting required on
oversize pages.

Our library of 3000 titles goes back to WW-2.
If you are interested and need more info please contact me directly.

Subject: FS: SRA-15 ANTENNA COUPLER 6-18 MHZ, 500W CW 50 OHM

I have several CU-421/SRA-15 manually controlled shipboard antenna couplers that can be used as is or for parts. The are very conservatively rated at 500 watts CW. My guess they will Handel much more. They use a pie circuit.

They contain one of each of the following major components.
10 to 300 uuf, 15KV Vacuum Variable Capacitor with drive= Jennings UCS300
50-5000 uuf, 2000 VAC Air variable Approx. size:10 " L X 6: W
RF coil 6 turn with variable loop
Meter
directional coupler.

These are unused priced at $300.00 FOB Somis
Supplied with a schematic and a copy of the parts list.

for more details and email photo please contact me directly.

Best regards,

From: Paul Keys <pkeys@columbiaelectronics.com>
Subject: FS: Sunair GSL-1900A 1KW PEP or CW RF Amplifiers/Transmitter covers 1.6

The Sunair GSL-1900A 1KW PEP or Average power RF Amplifiers covers 1.6 to 30MHz. Uses a single 4CX1500B and require a nominal 40 watts of drive. Automatically tuned in a few seconds.

The power supply uses 115/230V/1PH/60Hz. The GSL-1900A consist of LPA1900A RF Amplifier and PS-1900A Power supply.

As removed from military service in good condition with a set of plugs and a copy of the manual at $1,500(Three available).
Sunair GSE-924 Exciter 100W with for use with the above at $1,000 in good condition with manual and plugs. (one available)

The GSL-1900A with GSE-924 as a set for $2,250 for the pair.

This is commercial/military quality gear for those that like to tinker with military equipment.

Prices are FOB Somis, CA

There is a photo and complete specifications of this item on our web site in the HF section. http://www.columbiaelectronics.com

Visit our revised web site for our latest availability listings of military radios!

Our site now has complete specifications on some of the most popular military radios and more to come.

If you need manuals on military radios or military test sets we can supply professionally photo copies. No pasting required on oversize pages. High quality images.
Our library of 3000 titles goes back to WW-2.

Subject: Hallicrafters Sky Buddy I I S119 rcvr

Have a small Skybuddy receiver -60s vintage . Runs ok needs top cover repaint-has good panel. $50.00

Date: Sat, 5 Aug 2000 18:58 +0100 (BST)
From: maestro@cix.co.uk (Bill J)
Subject: Have vintage Tx parts; seek advice

I'd appreciate some advice re. a small quantity of parts from a few vintage homebrew boatanchor transmitters which I purchased for spares. Whether to auction them (eBay?), or a more suitable newsgroup, for example.

These include:

Raymart and Jackson Bros transmitter tuning capacitors and trimmers, large and well spaced for high HT (B+) and RF voltage use;

Insulating pillars, plain and beehive style, separation (ground to +) typically 3 cm (just over 1 inch);

Jackson Bros trimmer comprising vertical glass cylinder with fixed outer, and inner metal cylinder on fine-pitch screw with insulated adjusting knob on top. Like a tiny adjustable Leyden jar. Rare?

Ceramic tube bases: B4, B5, ?octal?, unusual 5 pin, unusual 7-pin (suspect for 811A and 813, as remains of these were found).

Moving-coil, moving-iron, and Radio Frequency (thermocouple) Panel Meters;

Large ceramic 2-pole 6-way "final" band switch;

Heater isolating transformers

RF chokes

Tuning coils

Old-fashioned panel switches (Single and double pole)

If you are looking for a replacement for any parts like these, or equipping a museum, or just collecting, please let me know and I will check to see if there is anything which might be suitable. I could make detailed measurements and a Polaroid photo for anyone /seriously/ interested in anything.

Could airmail any part to anywhere in the world, for a fair and reasonable price. NOT asking silly prices for anything.

Thanks for any advice,

Bill (GM8APX)(Edinburgh, Scotland) (QTHR)

Greetings to all ...

It is so nice to see someone like Terry Sanford to take the time to explain the test for the old Ford 6VDC radio. Hemming's Motor News magazine lists these old Ford radios at $150 up for the collectors of vintage automobiles in working condition. I have seen some sell over $300 in original working order.

Thanks for sharing your knowledge and experience Terry.

From: Nancy Marcotte <marcotte@iamerica.net>
Subject: Pioneer SX-939 FM alignment

Sorry for the off topic, but I'm sure someone here knows the answer to this.

The 939 is probably from the early 70's. A beast of about 100 WPC I'd
guess. I don't have any documentation for this receiver. I am cleaning it
up and would like to align the FM.

The center needle does not indicate the exact center, and the FM stereo
separation is a bit squirrley.

Can someone give me general alignment instructions (I'm experienced in HF
and VHF radio alignment and have a HP sig gen and tools).

The variable capacitor cover has these adjustments marked:

FMOSC AMRF2 FMRF3 AMOSC FMRF2 AMRF1 FMRF1

Do I peak the RF screws at one freq, or are there various freqs to tune
whilst doing this?

Also has screws for

IF Trans and RF coils 1, 2, 3

Any guidance would be appreciated.

From: Pete Domenici <senator_domenici@domenici.senate.gov>
Subject: Save the US: Vote NADER

5 Aug 2000 23:58:25 GMT

It's hard for me to believe that the next president of the United States will be George W. Bush or Al Gore. Both remind me of Hollywood movies that have been focus-grouped to death: they push all the appropriate buttons, but have zero original vision. Both stand for the same thing: corporate-driven business as usual.

There must be some way outta here.

Ralph Nader is no joker or thief. I think he and the Greens could give Al & George a good run for their money. At 65, Nader isn't running as fast as he used to, and the Green Party doesn't exactly have its platform figured out, but I think they have what it takes to inject a dose of radical democracy into the race. Unlike the two

Tweedles, Nader is real, he stands for decency and common sense and he still commands a lot of respect in progressive and activist circles. And hidden behind the rainbow coalition of lefties, eco-feminists and crazies, the Green Party does have some great ideas. It's the only party that stands for the Tobin Tax, true cost markets, media reform and putting corporations in their place.

In October, with a fired-up Nader hurling intelligent sound bites into the presidential debates, the whole game show might actually be worth watching. The alternative is the most sophomoric presidential race in American history . . . and the lowest voter turnout ever.

I'm putting a GO GREEN - VOTE NADER graphic at the end of all my emails from now on. I'm betting that, between now and November, the American people will wake up to the fact that their sacred democratic experiment has now degenerated into a choice between a corporate-sponsored Republican and a corporate-sponsored Democrat.

In these heady post-WTO days, a sudden, massive protest vote against Al & George is entirely possible and Nader would be the most apparent heir. With perhaps less than 25 percent of the people voting, an inspired Nader campaign could grab a surprising share of the action. And even if he does not come close to winning, at least imagine how his campaign might pull together some of the fired-up, post-WTO forces and lay the groundwork for something really visionary in 2004.

Download the graphics and help launch an email pyramid scheme to dump the Tweedles! Two formats are available, a magazine sticker (17K) or a Banner ad (5K):

==========

What it Means to be Green

"At the root of all Green political action is nonviolence, starting
with how we live our lives, taking small, unilateral steps toward
peace in everything we do. Green politics requires us to be both
tender and subversive. Affirming tenderness as a political value is
already subversive. In Green politics, we practice tenderness in
relations with others; in caring for ideas, art, language, and
culture; and in cherishing and protecting the Earth. To think Green
is to build solidarity with those working for social justice and human
rights everywhere, not bound by ideologies."

-Petra Kelly

Subject: WTB: Transmitting Cap

I am in need of 2 transmitting caps ?820pf at 8KV, 11A @ 1000 Kcs. I can use either the clyinderical Sangamo type G-2, or the Aerovox or Sprague caramel colored square ones. I am trying to put an old Gates broadcast transmitter on 75 meters and these caps are needed to resonate the tank. As an alternative, I could also use 2 1500pf caps to series up with the 2000pf caps that are already there. Size is not a constraint.

Thanks for reading.

Date: 2000-08-11 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000811122332.07744.00000099@ng-cv1.aol.com>
Source record: 62892

From the Associated Press, today:

DENVER (Aug. 11) - Whether brought about by rampant materialism or a penchant to save things for sentimental reasons, Americans seem to be running out of space at home to keep all their stuff.

439. FS: HAMMARLUND HQ-110 RECEIVER

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-11 00:00:00 UTC

Message-ID: <39943127.78FDADE4@sprynet.com>
Source record: 62893

HQ-110 receiver w/ 12 hour clock. Excellent condition. Works perfectly. Includes manual. $175 plus shipping.

Rich

440. FS Hammarlund HX-50A Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-11 00:00:00 UTC
From: Jack <friday2k@pacbell.net>
Message-ID: <l8Yk5.383$0D2.49939@news.pacbell.net>
Source record: 62894

After much thought I have decided to part with my HX-50A transmitter. The price is high, however this is truly a collector quality rig. It even smells new. Come complete with original carton and manual. Does not have the 160 meter add on. The rig is in excellent condition. The only band I used with it was 20 meters and it operated well on all modes (CW, AM and SSB). There is not a scratch, rub, dent or mark of any kind on this radio. The chassis is equally clean. I am selling because I am not going to set up a Hammarlund station right now and know I will be sorry I let this beauty go.
Photo at: http://home.pacbell.net/friday2k/HX50A.jpg
Price: $600 plus split shipping cost.

441. FS Johnson Matchbox or

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-11 00:00:00 UTC
From: k8bvj@webtv.net
Message-ID: <16299-399456C0-55@storefull-236.iap.bryant.webtv.net>
Source record: 62895

FS Johnson Matchbox...I just bought this thing to go with my Johnson Ranger looks pretty good but I need some kind of coupler for the swr meter to work from what I was told.
I am letting it go for what I paid $120 plus shipping
The meter cover has been repaired at the top other than that check the picture out.

Unless maybe you have a coupler for this thing so I can use it....

Thanks Jack .....picture can be seen here:

Probably the HQ-110 is more sensitive. Were you to re-tube it and give it an alignment it would surely surpass the SX-73 in all areas.....except....it ain't an SX-73!! I have one here and above 20 MHz the sensitivity begins to suffer. Use them both!!!

"John A. Rodenbarger" wrote:

Source record: 62905

This receiver is in excellent shape. It has been thoroughly cleaned and lubricated. All new electrolytic capacitors have been installed. A new drum dial was installed. Receives broadcast and AM shortwave fine. Sensitivity is low on some bands. This is a late model set, uses 6BA7 mixers and 6CB6 RF amp. Front panel is excellent, no broken or chipped knobs. The cabinet has been touched up with St. James Gray paint. A previous owner has added three RCA type jacks on the rear panel. These can be removed and holes plugged if desired. This is the only modification I can find. This set has a crystal calibrator installed. All internal shields are intact. Included with the set is a Collins color manual and a Sam's photofact folder. Also included are two plug in adaptors on which I have no documentation. I believe them to be product detector adaptors which plug into the internal accessory socket in the receiver. This set is exceptionally clean, guaranteed no dust or crud inside or out. I have .jpeg files available if you would like to see them, just email me. $650. Shipping will be extra and I will insist on double boxing with lots of packing material. I live in the Houston TX area if you want to pickup or see this receiver.

Thanks,

Ron, AB5WG

Group,

HELP!
Any body ever heard of these two Vintage tube items? I am trying to help ID
them for a friend. He wants to sell them. Any ideas on their value?

#1)Magnavox audio fq. amp type AC3/modC/#2236. It used 3 type 33 push-twist
tubes, external ï¿½A&Bï¿½ battteries. Black wrinkle finish.

#2) Heintz/Kaufman Ltd, San Francisco. 3800kc to 23000kc Radio receiver type
900 (regenerative). Serial number 113, USPat 1,507,689-1,907,806. Cabinet is
solid copper. Beautiful piece. Outstanding quality, never seen anything like
it! I am not interested in this stuff myself. I will print out and forward
any info to the owner. Also if anybody is interested in these, I will give
you his phone number.

Thanks for reading and especially thanks for any help.

Hi group,

I am running an old Lafayette HA-230. The question I have in with
the switch marked MVC and AVC the manual does not give me good
coverage on what this switch does. Can anyone here help explain how this
switch is used and when.
>
Just for the record, this is a great radio. It has wonderful recieve. I
have very little history on it, some have told me it is a spin off from
Kenwood.

=======
Hi Dave -- AVC is Automatic Volume Control -- when the incoming signal is strong -- AVC cuts back on the receiver gain and vice versa. AVC tends to keep a constant volume regardless signal fading.

MVC is Manual Volume Control where the receiver gain is controlled by the RF GAIN knob (If you have one) -- otherwise the receiver is in a full gain configuration.

Here is how one receiver AVC works:
AUTOMATIC VOLUME CONTROL - Delayed, amplified AVC gives constant output within 6 db for a change in r-f
input from 5 microvolts to 0.5 volt. AVC is applied to the r-f stages and three i-f stages. The proper amount of AVC delay is employed for maximum sensitivity on weak signals.

Hello Ralph,

Mouser does not list them but I think Newark does. Look
under Wire Pro as the manufacturer. They should run
around $8 each.

BTW, I always look at the el cheapo mikes at a hamfest
because you sometimes can buy a mike for a dollar or so
with this connector on it.

good luck & 73,
Phil

MVC = Manual Volume Control
AVC = Automatic Volume Control

For voice/music, etc. AVC is probably best. It will tend to keep the gain of the receiver such that the signal will remain fairly constant with fading, etc. You can usually run the RF gain control up full and adjust the volume by using the AF gain control for comfortable volume if you have the AVC on.

For CW (code) or for SSB the usual process is to use MVC and turn the AF gain 1/2 to 3/4 of the way up (or more) depending on how much hum is produced and start with the RF gain all the way down and advance it until you can hear the signal you're trying to tune in. Of course for both CW and SSB you need to have the BFO (Beat Frequency Oscillator) turned on and adjust its pitch while you rock the tuning back and forth to give the strongest signal and a pleasant tone on CW and to make the voice as clear as you can on SSB. Using MVC you provide the gain control by riding the RF gain control. Once you've decided where you want the AF gain control, make adjustments in how loud the signal is by adjusting the RF gain and keeping the signal low enough so that it's not distorted.

If you try to read CW or SSB with the AVC on, since you must have the BFO on to introduce a beat signal for CW or to reinsert the missing carrier on SSB, the BFO signal will cause the AVC to decrease sensitivity to the point where you usually won't be able to hear the desired signal. More modern receivers will have a product detector which can operate with the RF gain full on on both CW and SSB.

No, Lafayette was a private label of (guess what?) Lafayette Radio and may have had Trio-Kenwood produce something for them but Kenwood is definitely NOT a derivative of Lafayette. Lafayette did not design and produce gear but put their label on other company's products.

From: "Ron Eisenbrey" <ab5wg@alltel.net>
Subject: FS: COLLINS 75A-2

This receiver is in excellent shape. It has been thoroughly cleaned and lubricated. All new electrolytic capacitors have been installed. A new drum dial was installed. Receives broadcast and AM shortwave fine. Sensitivity is low on some bands. This is a late model set, uses 6BA7 mixers and 6CB6 RF amp. Front panel is excellent, no broken or chipped knobs. The cabinet has been touched up with St. James Gray paint. A previous owner has added three RCA type jacks on the rear panel. These can be removed and holes plugged if desired. This is the only modification I can find. This set has a crystal calibrator installed. All internal shields are intact. Included with the set is a Collins color manual and a Sam's photofact folder. Also included are two plug in adaptors on which I have no documentation. I believe them to be product detector adaptors which plug into the internal accessory socket in the receiver. This set is exceptionally clean, guaranteed no dust or crud inside or out. I have .jpeg files available if you would like to see them, just email me. $650. Shipping will be extra and I will insist on double boxing with lots of packing material. I live in the Houston TX area if you want to pickup or see this receiver.

Thanks,

Ron, AB5WG

From: "Jack" <friday2k@pacbell.net>
Subject: FS Hammarlund HX-50A Transmitter

After much thought I have decided to part with my HX-50A transmitter. The
price is high, however this is truly a collector quality rig. It even
smells new. Come complete with original carton and manual. Does not have
the 160 meter add on. The rig is in excellent condition. The only band I
used with it was 20 meters and it operated well on all modes (CW, AM and
SSB). There is not a scratch, rub, dent or mark of any kind on this radio.
The chassis is equally clean. I am selling because I am not going to set up
a Hammarlund station right now and know I will be sorry I let this beauty
go.
Photo at: http://home.pacbell.net/friday2k/HX50A.jpg
Price: $600 plus split shipping cost.

Subject: HRO 5 and misc

Hi Lew:

I am interested in the HRO without the meter. I believe that would be the HRO Jr. I do not know what the prices will be, and it may be out of my league. I have been asked to assist in making a old radio station for the museum that houses the Hughes Spruce Goose. Since Hughes was an amateur in his early years, he appreciated the ability to communicate that hams had, and when he set up his round the world flight, he used hams exclusively. Although we are still negotiating, the HRO would be perfect for a period ham station. The museum may still decide to use a ham station from the Viet Nam era, since it is a memorial to a son who fought there (but died in a car wreck years later). If they are ready to commit now, it could be donated to a charitable organization. Or, I could buy it now and either loan it or keep it if they decide not to use that era. Have always wanted one anyway. However, the market price may be more than I want to pay.

If the transmitter is reasonably compact and has a clean, amateur look to it, that would also be interesting for a period station. Would like to get photos of that and how much you are expecting for it.

Thank you for your assistance. 73, Colin Lamb, K7FM

From: jwodell@ameritech.net (Jerry W. O'Dell)
Subject: What to do with old stuff

Over the years I have collected a whole bunch of old,
real boatanchors. Things like a DX-40, Drake 2B,
many old transceivers, HQ170, and so on.

Quite frankly, I don't see how I can sell those things,
honestly, for more than $100. Most have minor
eccentricities.

But for $100, it simply isn't worth packing them up
and shipping them. So they sit there. Same problem
with giving them away. I'd still have to ship them.

I ask on the local nets for people who would like them
really cheaply, and nuttin. The new hams, of course,
have never heard of tubes, and would kill themselves
on the HV.

I suspect I'm going to through them out! Seems a pity.

I feel your pain. Where are you located Jerry? Maybe I can send someone over to
take 'em off your hands.

I run an all vacuum-tube station on HF, and have a small collection of restored
Hallicrafters receivers. I wanted to be sure these wouldn't end up in the
dumpster or on E-bay when I passed away, so I searched for some younger person
who would have an interest in such things, so that I could specify them in my
will. I had a really hard time finding anyone. It's become a "plug and play"
world, but there are still a few curious souls about, who respect what has gone
before.

I first got interested in radio when things glowed. My first non breadboard radio was a Knight Space Spanner (if you happen to have one of those, I'll buy it from you) hooked up to a 40m folded dipole on the roof. I used to ride my bicycle to Henry Radio when they were on Olympic Blvd in West LA. I would lust after the stuff in the piles of used equipment then spend a buck for a CK-722 or other part and ride home. I happened to be in LA on business a few years ago and dropped by the Henry Radio store on Bundy. With all respect to the Henry brothers, it just aint the same!

25 years later I finally got my ticket and like most, bought the state of the art solid state stuff. Now after having been a ham for over 15 years I got the bug for a piece of history. I bought a pair of Drake Twins. Haven't tried the xmtr yet, but the rcvr needs work. Unlike my solid state stuff, when I pulled the cover and saw all those discrete parts with leads and lots of room for my stubby fingers, I said to myself: "I can do this!"

Don't dump those pieces of history. Take one of the rigs to a place like Mail Box's Etc. and find out what they will charge you to package and ship it to CA or FL. Establish this as a standard packaging fee and offer your stuff on the web. Big, heavy items would have to be handled differently, but if somebody is interested, they'll pay. I'd like to see the list.

Good luck

Gene,
N4JEE

Hello Jerry, love your call.

I am surprised that there are no takers for you equipment. If you are going to give them away I would even consider driving all the way from the far side of Chicago, there has to be others. I sure there has to be some interested people in the Detroit area that would be willing to buy them on a pick-up only basis. Have you tried some of the collector or other non-ham radio groups, a local news paper or local AM radio swap shop. Also, see if there is a local museum that would be willing to

take them. When I went through the Ford Museum last year they had a nice display of "homes" of the period with period items.

Please, before you throw them out, let me or post it up on the internet. I may not keep everything, but I am sure I will at least some. But I am NOT interested in making money on this, just ask my wife. If you want to place a limitation of no E-Bay sales, this would be fine. I enjoy fixing older radios and I would also like to see them find a good home. My father-in-law, WA3WZX, I just clued him in someone who was looking for some old earily 1950's Link VHF equipment. His base 6 meter FM tranciever is now sitting in a race car museum in Fl. I am sure just with this posting you will get a bunch of responces.

Gee, I wish I could find someone like you in my area. I have always said
that building "stuff" was one of the main reasons I got into ham radio to
begin with. It's really hard to find anyone in my area who will help with
more than just piecing together an antenna system.

From: "Bob"
Subject: Ameco 6 and 2 Meter nuvistor converters

Two Ameco type CN nuvistor converters. The two meter unit is crystaled up
for a 14-18 Mhz if output, the 6 meter unit is crystaled up for a 30.5-34.5
mhz IF (like the late SX-101 and NC 300 or NC303 units. The two meter unit
is nearly blem free. the 6 meter unit has a few splothes on the edges of
the copper plated case. Otherwise these units are in nice shape with all
nuvistors in place (thee in each converter plus one 6J6 in each converter
for Xtal LO). Very clean under the chassis. No docs, but power connections
noted on the chassis. Figure 5 dollars first class postage conus.

$50.00 for the pair as noted.

tnx for the read.
Bob, KE6F

Subject: Drake station for sale

Hello
I have a very nice near mint.. Drake TR4CW for sale with the AC4, MS4
and Remote VFO RV4C which also has a speaker ..
I am only the second owner of this gear.. it all works perfect and is
in line .The matching Drake mic is included as well..
This is very nice gear as noted..I am taking offers or trade but would
like to sell.....
Reason for selling is that I 'm thinking of purchasing some newer Ten
Tec gear..

thanks tim

Subject: FA: Collector quality Heathkit Twoer HW-30 on Ebay

VERY nice Heathkit HW-30 (original non-A version) on Ebay.
Own the original 'Benton Harbor Lunchbox'. This one is collector
quality - one of the nicest I've seen. Has the logo, all knobs original,
no extra holes, absolutely NO mods, has original mic, power cord,
and even has the plastic cover for the license holder. Ground screw
has the nuts, and it's still got the RCA antenna jack. And it even
works! No dents, scratches, or any marks beyond very light wear
here and there from being 40 years old. If you've been looking for
a GOOD Twoer for a Heath collection, this is it!

Subject: FA WW2 19 Set

Who on earth decided it would be a good idea to PAINT it? I would have
easily paid well over your asking price if iw had the original knobs and
front panel. If the knobs were broken, then you only need one to make a
mould to make the rest.

I don't suppose you have a 'dynamotor' for the No.19 set? or the
microphone/headphones?

From: "Dave"
Subject: FS: PTT telephone handsets - cheap!

Hello all,

Found another box of these things in my garage - they sold like hotcakes last time, so here goes again.

It's a Walker Equipment model PTT-500T push-to-talk standard telephone handset. Exactly like the one on any old Western Electric phone, except there's a handy PTT switch on the handle, wired in series with the microphone element. Convenient, eh? Several folks have used them for various radio connection projects, paging, in-house intercom (with 2 of them and a talk battery arrangement of some sort).

See a photo at:

http://www.boatanchors.com/public_html/handset.jpg

and the data sheet that comes with it at:

http://www.boatanchors.com/public_html/handset_datasheet.jpg

These are new in the box, all brown, and less coily cable. Uses standard coily cord (4 conductor, not 2) for a regular phone handset.

Price is only $10 inlcuding US Priority Mail to any US destination. The current wholesale price from Walker is over $25, with $36 a standard street price.

Thanks for the read,

Dave WB7AWK

From: Mike Hammer
Subject: Help with Ameritron AL 84

Hi Mike,

I had this same problem, no solution. The placement of the 10m tap is obviously the problem, but where it should go I'm not sure. I modd'ed my AL84 to take Svetlana EL509's, similar to the mod on the Svetlana website for the GL1000 (if I recall correctly), and am still having trouble tuning it on 10m. Unfortunately the amp is lower on the priority list than getting the tower up, so won't get back to it for a while.

What it looked like was that less inductance was needed than what was shown on the Ameritron spec. I finally just moved the tap to the input for the coil and it was close but still not right -- only got 200W out instead of about 350 or so expected (given that 10m is pretty much over the edge for those tubes). So tapping in closer to the coil input might do it for the stock tubes. Just don't burn up the tubes testing it!

Mike N2VR

Subject: Wanted: NC-183 Dial

Anyone have a NC-183 Bandspread dial they would like to sell. Mine is
bad. Maybe a name of someone who makes them??? Would appreciate any
help.

Thanks much,
Don Ferrill K9TWO

For Sale

Antique Radio Crystals

Quantity of more than 550 crystals in various holders and by various manufacturers.

Examples:
RadioMarine
Bliley
Motorola
Federal
James Knight
Crystal Products Co.
Western Electric
U.S. Army Signal Corps.
U.S. Coast Guard
Japanese WW2 holder

These are mostly WW2 crystals made for use with old transmitters like the BC-610 and BC-669
Examples of the holder types in this group include:

FT-243
CR-1A
FT-171B
FT-249
Octal
FMT
Round (small)
Round (larger)
DC34

Here are some examples of the frequencies you will get - they include even a few in the
80m and 40m ham bands, and several others just outside that could probably be
rubbered in and used on BA rigs.

All in KC/s
1196, 1809, 1950, 1970,
2005, 2065, 2075, 2125, 2182, 2220, 2320, 2340, 2360, 2435, 2570,
2662, 2670, 2716,

3418, 3450, 3465, 3570, 3995,

5485, 5660, 5760, 5800,

6210, 6470, 6700, 6790, 6800, 6852, 6900, 6920,

7270, 7280, 7350, 7390, 7440, 7675, 7850, 7930,
10736, 15780, 140580, 140940

Many others of course. There are just too many to be able to list them all here.
They have been in storage and need cleaning up. Pictures available.

I will sell these as a complete lot for 12 cents each!

All yours for $65.00 plus UPS shipping of 35 pounds from Florida.

Would anyone have a manual for the Heathkit AR-3 Receiver. I was given one that is in poor but salvageable condition and I'd like to return it to use.

It also has an unoriginal tuning and bandswitch knobs if anyone had spares to sell or trade.

I'd gladly pay for copying/postage or swap for manual copies, parts etc.

Many thanks!

- Gary

National NC-45A general coverage receiver from the late 1930's. It was reconditioned a few months ago (caps, tubes, etc.) and it should not need any service. I'm listening on it right now! This radio is a rack-mounting version of the NC-45. A picture is available. I will pay Mailboxes, Etc. for double-boxing this item. $150 plus shipping from Schenectady, NY

The 6KV6A is equivilant to a 17KV6A and a 22KV6A. I don't have
anything on the 8417.

The 6KV6A is a Color TV type Shunt Regulator tube.

Evan -

8417 is a uncommon audio output tube, used in the Dynaco Mark VI and Quicksilver 8417 among others. They have gotten fairly pricey as there is no good substitute. There is no equivalent although KT88's can be substituted in many cases with substantial modifications.

Dear Stew,

You don't mention whether the radiogram is solid state or uses valves. However, it might be worthwhile running voltage checks on each channel, as well as trying to trace the signal paths. A common fault in elderly audio equipment is dirty switches. These can present an exceptionally high impedance/resistance to a small signal, such that the signal just doesn't get through. In the UK we can buy Super Servisol, an aerosol switch cleaner, which does the job. There is a warning about certain plastics that can be attacked by the cleaner, but I've never had any problems with it. I have "fixed" at least three audio items using this stuff. I don't know if it is sold in the USA, but there will be an equivalent product.

The best of luck!

The 8417 is a beam power tube, once commonly used in audio service.
Discontinued, and getting quite scarce and pricey these days. Perhaps the
circuit could be modified to use a 6550 or other easier to get tube.

Someone wandered down this path once before looking for the WPE and WDX SWL callsigns. There is a WPE website someplace and Popular Electronics has an interactive e-mail capability so you might check with them. Of course, I may be confusing Hank Bennett with Tom Kneitel as they were both involved in that at one time or another. Tom is with Popular Communications (and CQ?) now and may be a source of some leads.

Sorry I do not have anything more specific.

The switch you mention is (automatic volume control) and(manual volume control).. you may find that cw signals are more easily controlled in mvc position, broadcast and other am will be fine on avc setting.. may be Kenwood is a spin off from Lafayette , I heard about Lafayette long beforeI heard of Kenwood.. have fun Harold W4PQW

Panoramic Radio Products "Panalyzor" panadaptor model SB 3. 115 volts,
60 cycles. This panoramic adaptor is working and in very good condition.
It appears to be a commercial version of the famous BC-1031 from WW2.
I-F frequency is 455 KHz. I have a picture available. $185 plus s & h
from Schenectady, NY

Hello. A local ham friend of mine obtained a B&W 5001 HF transmitter. I saw it, looks very clean. Probably weighs 100 lbs or so. He wants me to sell it for him. ANY guesses what it might be worth and any info? Really pretty monster it is. Thanks in advance.

549. Astor Stereogram

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-13 00:00:00 UTC
From: KGL-900 <kgl900@giznet.com>
Message-ID: <8n5dk9kao1@nina.pacific.net.au>
Source record: 62824

Does anyone know of the following StereoGram:

Make: Astor
Model: Unknown (Possibly G18AA)
Made: 1968

The problem:

No ouput, from any of the inputs (gram, din, tv, radio)
(Although there is noise (like pink noise) coming from the left channel amp)
The right channel amp is not producing anything.

I have been through and re-soldered all the joints, still no luck.
Does anyone have any idea what they fault may be?

Thanks;
Stew

======
Howard there is a Model 40 on E-Bay right now -- but the auction is not
over for another 5 days. Keep an eye on this and the final auction bid
might give you an idea what folks are paying these days. See URL:

Older HP Audio Oscillator ...

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=402448816

Does anyone know the date of this unit? There are no dates on the unit
or on the HP-200D manual that I acquired more recently for it. From the
serial numbers, the manual appears to be newer.

Subject: FS: BC611 BX-49 crystal boxes

I have some BC611 BX-49 Crystal boxes available, 12 channels, range 4035 to
5500 kHz. The box is OK but the white plastic tags on the outside of the box
are a bit deformed and curled from where the tags stick out of the tag
holder. The plastic suffers from old age I reckon. The tags have the channel
frequency written on them. Because the tags are curled a bit and because the
plastic is become brittle I can't 100% guarantee they won't brake during
transport but I don't think this is likely. This is the only negative thing
I can think of. The box it self and its content are in fine condition taken
in account that it dates from 1944.

Price is 35US$ per box, shipping to the US is 15$ extra. With a bit of luck
2 boxes will ship for 15$ when below 5 kilo. Next shipping class is 30$ for
up to 10kilo.

From: "Terry Perdue"
Subject: FS: Heathkits

I have two items for sale:

W5-M 25 Watt Audio Amp with Peerless 16309 output transformer. This classic Williamson is flat from below 10 Hz to 100 kHz! I was going to restore it, but don't really have time or a use for it. It's complete with cover and bottom plate, and there's no rust, scrapes or dents except for a small spot (<1/4") on one corner of the chassis where the copper plating is gone. No

broken parts. The amp has 6L6s installed instead of the original KT-66s. If the face with all the connectors is considered the front, there is a 3/8 hole in the back and an on/off toggle switch on the left side. The wiring job isn't very pretty, but I've seen much worse and it works. Will sell for $95 plus shipping with a condensed manual (everything but the step-by-step).

Subject: FS: Plate/Filament Xfmr

For Sale: Excellent Plate/Filament Transformer, Hermetic Seal, MFG Paeco "
Hewlett Packard" 115/220 Primary

Secondaries as follows:

1. 280 VAC at 200 ma full secondary DC
2. 209 VAC at 125 ma full secondary DC
3. 6.3VAC at 4.5 amps
4. 6.3VAC at 4.5 amps
5. 6.3VAC at 4.5 amps
6. 6.3VAC at 1.4 amps

All ratings are for continuous commercial service. Full transformer data silkscreened on the top of the unit. connections are via insulated turret terminals on the bottom of the unit. Mounting is vertical via 4 1/4 inch studs on the bottom of the unit. Removed from HP test equipment, Excellent mechanical and electrical condition. Great for a moderately sized tube amplifier where separate plate and screen supplies are satisfied with a bridge rectifier on HV windings or for a 100 watt or so tube transmitter

where the 289 vac winding can be applied to a voltage doubler for a nice 800 vdc or so. Shipping weight 15 lbs from zip 95827. Size is 4 1/2 wide X 4" deep X 5 1/4 inches tall.

$25 plus ups from zip 95827 on 15 lbs.

Tnx for the read

From: Nick Kennedy
Subject: Hallicrafters Haters Association

Your subject line brought a smile, although it's sure to stir controversy.

I can't confirm or deny your technical observations. My personal experiences that could qualify me as a hallicrafters hater include owning a succession of truly awful hallicrafters receivers. The S-119, S-120, S-20R, SX-140 and SX-111.

In defense of hallicrafters, I'll admit that the S-119 and S-120 were never intended to be communicaitons receivers. But they were all I could afford in 1962 and 1964. And the S-20R was old even when I got it around 1965 or so. If someone walked across the floor, the vibrations would cause the LO to jump about 20 kHz. The SX-111 had bad microphonics. Maybe I could have fixed it, but I was just a dumb kid.

I think hallicrafters was really trimming cost (and quality) in the 60's and exploring the bottom end. Their top of the line stuff was probably fine.

The S-120 didn't have a true BFO. Instead, the suppressor of the mixer was grounded thru a pot, causing it to oscillate like a regen. Gave CW a sound kind of like gargling, if you could hear it over the hum. I think the SX-140 worked the same way, with the added benefit that when

you adjusted the BFO, the receiver frequency changed dramatically.

I have to say though, I loved that HT-40 transmitter. Even picked up
one at a hamfest a while back. I also bought an S-120 over the
internet, causing one boyhood ham friend to remark that I had "lost all
credibility as a mammal." He may be right.

Nobody has the monopoly on poor designs/poor choice of parts...

Collins KWM-2 open frame relay dirt problems
High freq hiss in EVERY Collins solid-state radio I've ever used

And speaking of distorted audio... another Collins specialty (51J/75A series). Seems Collins couldn't design an audio stage to save their lives. Absolutely the most irritating audio out there. Even worse than my Scrapwood TS-50 with the built-in speaker. Jesus Christ, guys, it AIN'T that hard! Any RCA tube manual has schematics for decent audio stages. Even AA5s have better audio.

Bad power transformers in National products
Huge image and intermodulation distortion problems in Nationals
Absolutely the WORST bypass caps in Hammarlund SP-600s
Shitty friction drive dials in 40s-50s Hammarlunds
Crummy paint on E.F. Johnson stuff (ever see an unscratched one?)
...and the SP-600 also takes the cake for "most impossible to repair" radio.

From: "Gary - KJ6Q"
Subject: Hallicrafters Haters Association

HEY Pat - and the rest of you guys - you must have too much time on your hands, and crappy band conditions and weather are getting to ya'...

Problem REALLY is, you're looking BACKWARDS in time at radios that weren't all that bad - IN THEIR DAY AND TECHNOLOGY! After all, what significantly BETTER receiver in it's price class WAS there than an SX-100? Apply the same test to ANY of the other Hallicrafters/National/Hammerlund, and dollar for dollar, model for model, the comparisons won't be very far apart.

NOW, add 40-50 years to the mix, and switch from your current super whoop-te-doo solid state transceiver, and ALL that old stuff seems like junk in comparison... What do you suppose an Icom 756 PRO will look and play like 50 years from now, compared to whatever might be available at THAT time in the future?

From: WB3KUM/9
Subject: Help winding a transformer

I am in the process of winding a transformer for a HB project. I
thought I remember reading and doing 2 wraps per volt as a teenager.
Checking the internet, I saw one place advertising for sale transformers
with 1 wrap per volt. I have two ARRL Handbooks (older). One says 5-7
wraps per volt, the other says 6-8 wraps per volt. The transformer has
a center core section of about 3.5 sq inches and about 2 inches deep.
The reference in the handbook was 1 sq inch.

I would like to do 5 wraps per inch, but I don't know it I have enough
room for that with the 5 winding I am putting on the transformer.

Spec.
600V secondary B+
250VCT secondary low B+/bias
117V primary
6.3 filament

350W ICAS

Core is an old transformer out of a 500W microwave oven.

Many thanks

Dennis WB3KUM/9

From: "Bob"
Subject: Help winding a transformer

You have to know the flux density and core cross sectional area in order to
calculate turns per volt.

73, Bob K6DDX

Date: Mon, 07 Aug 2000 20:05:40 GMT
From: "Norman Litsche"
Subject: Help winding a transformer

If you are going to use the original primary winding on the microwave
transformer, try winding ten experimental turns over it and see wht voltage
you get. Some calculating will tell you how many turns per volt. If you're
going to strip the core bare, count the primary turns as you take it apart.
#turns/120 will equal turns per volt.

From: jack parr
Subject: Help winding a transformer

I have some data which may help.
If your core is 3.5 sq inches the Turns per volt would be 1.79.
As I do not know what gauge wire you are using etc., I cannot determine if
any particular winding will actually fit in the space given. If your xfmr
is the size of the beast that I have (same source) you will have no trouble
there. If you use the above figures you will get the correct voltages from
your windings
I have done many xfmrs over the years and I developed a program in my
computer to do the calculations. Be advised that the figures the others
gave you MAY be right for THEIR xfmr, but theirs may have a different core
area etc. which changes everything.
If you require a fuller calculation for your winding, please e-mail me
direct at parrfo@sympatico.ca with voltage, current required for each
winding & I will e-mail the results to you asap
Regards
Jack Parr

From: "Harry Lippitz"
Subject: Help winding a transformer

This is a complete subject in itself, and soon to become a dead art! To wind a transformer, there is a formula (that I have forgotten) for calculating the total power capacity of the former/laminations you have. If that is big enough then it is safe to continue.

Calculate the wire size you need for all windings to take the currents (using another formula that I have also forgotten), then using the wire data, calculate how many turns/volt you can have for the former winding area you have. There is a range of flux density that you can assume, if you do not have data for the iron core material you have. You can also check the turns by putting the number back into the formula and checking you have the right former area.

As long as the former winding area is the right size, then you will have the right number of turns/volt. I will see if I can bring the data to work tomorrow and give you the info and formulas and tables you need. I have wound loads of transformers and all "run cold", but in the meantime you can take your laminations and clean/laquer them so they are insulated from each other when you assemble the former again. One of the big problems with re-using transformer cores is the eddy currents caused by laminations shorting together. This is one of the main causes of the transformer buzzing and getting hot.

If you wish, I will see if I can scan my lab book and e-mail you the pages, but it is all hand-written. No promises; I am rather busy at the moment having just moved house. When you buy a house, you don't buy a home, but another full-time job!

From: "Terry Perdue"
Subject: New blank Heath front panels

I happen to have three new unpunched and unpainted aluminum front panels that, when punched, painted, and silkscreened, became the front panels on many Heath products. They measure 8.5" by 13". The IT-17 Tube Tester is just one of many kits (the only one I happen to have) that used this panel.

If anyone has a kit they're restoring that has a bent or dented front panel, and hasn't been able to find a parts rig, this could be a solution. Alternatively, it could turn a discarded cabinet into a homebrew 'one-of-a-kind' Heathkit!

$10 each, or all three for $25.

John,

I have an otherwise perfect "Non working" Icom IC-706. Due to it's proximity to older boatanchor type rigs, it managed to get 24vac up the key jack! It no longer powers up and I don't want to mess around shipping it to ICOM. What would you offer? I opened it up and there doesn't appear to be any major damage inside.

From: john derrico
Subject: Parts needed for National NC-173

I am currently restoring a National NC-173 receiver (circa 1947) and need a few more parts to complete the project. Your help is greatly appreciated.

- Selectivity control knob
- Antenna terminal strip (3-term(screw type) W/ground link)
- External chassis ground terminal (screw type)
- National logo for front.

- Also a couple of (unused) NOS carbon 47K 1W 10% resistors for another project.

Thanks,

John

Subject: Radio, electronic & computer Fleamarket 9/10/00 in S.E. MA

Hi all,

The Southeastern Massachusetts Amateur Radio Association Inc., of South
Dartmouth MA., is
holding it's annual FLEAMARKET of Radio, electronic & computer
equipment. To be held
Sunday September 10, 2000. Set-up time for vendors is 7 AM and opening
at 9 AM.

Food is available.

I will be there with as much as my GEO can carry! (I live 2 miles away)
Table model AC sets,
a tombstone, a cathedral, and Battery sets, a T.O. many AA5's, several
consoles. Just got the
guts of a Radiola II today, my first curtain burner today, a Radiola
25, Radiola Super, SP-600
boatanchor. All this stuff and more that you bring, goes to this
Fleamarket!

This is THE FLEAMARKET for Radio, electronic & computer equipment in
Southeastern MA

Did I mention sellers set up for FREE!

Buyers admission is $2.00

Click here for more info and map!!

Save September 10th on your calendar

Subject: Receiver separate from case?

I am looking at a very nice Collins boatanchor for auction but the seller is
selling the case separate from the receiver. Is this typical on Collins
sales? I have never seen this before.

Date: 08 Aug 2000 03:20:04 GMT
From: jimmoci@aol.com (Jim Moci)
Subject: ~~FS:JOHNSON 500~~

For Sale: Johnson 500 RF deck & original Johnson Manual. No PS/Modulator. Case
was glass beaded, powder coated and is ready for Johnson Maroon paint. Front is
in OK shape. Has scratches around edges and some scratches on front. Nothing
obscene though. All knobs are there but a couple are missing white pointers.
The deck appears totally stock except the clipper circuit looks like it was
bypassed for better fidelity audio. This mod was common on many 500's and
Valiants. I have had it for awhile and hooked it up to a friends 500
PS/Modulator when I bought it and it worked fine. All tubes are good including
4-400 final. I was going to build a killer PS/Modulator for it but too many
projects- not enough time. New motorcycle forces sale. Serious inquiries only-
no trades, no hagglers, no tire kickers. I am not giving it away considering a
500 with PS/Mod sold on Ebay for $2000 awhile back. First $800+ shipping takes
it. You can check it out in person near Philly if you like. Grab it before it
ends up on ebay this weekend.
Thanks for looking!
Jim

561. Victor Short Wave Adaptor.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-13 00:00:00 UTC
From: Terry Sanford <tsanford@roadrunner.nf.net>
Message-ID: <3996B534.BF10BFAD@roadrunner.nf.net>
Source record: 62836

Looking for something else I came across a 'short waver converter?

Brown crackle cabinet (top missing), wooden base. Unit is 17 inches wide, 10 inches deep and 8 inches high. Knobs missing. Overall condition 'fair'; maybe a three or a four on scale of 10.

At first glance it looks like a 1930s radio receiver. I was puzzling over the make until I noticed the small "His Master's Voice" symbols moulded into the two, what I will call the 'escutcheons', through which you view the 'tuning' dials. 0 to 100. Then I found the original label on the bottom!
"Victor Short Wave Adaptor; Range 16.5 to 110 meters. " and "Victor Division, RCA Victor Company, Inc. Camden. N.J. U.S.A."

The two cord driven metal tuning dials tuning dials are each coupled to a single gang variable capacitor which are guessed to be 200 pfd. variety with wider spacing than later variable capacitors. One must be 'tuning' and the other 'oscillator'?

Also projecting through the front panel are a rotary on/off switch and a potentiometer which I've just noticed is marked "Feb12 1931 'From Magnetic Phono Cartridge' '4513'." judging by the wiring, what looks resoldered and an incorrect shaft length this may not be an original item? (Idea? Could be a reaction control!) Unless it was modified; see item removed below.

Inside the case there is a metal removable chassis on which there is a black paxolin board riveted to the main chassis mounting five (five pin) sockets. The five sockets are; UY224 (also a top cap wire), ANT (into which a single winding 'ANT' coil marked "23-45 M" {presumably metres?}is plugged, UY227, OSC coil (similar with two windings), UY227.

Tubes are out but I think I've got two of them somewhere. I don't think my '30 year old' tube tester which is also "somewhere" has a that kind of socket on it!

Underneath there are a number of metal cased capacitors, three brown plastic Aerovox USA capacitors and three carbon composition resistors. Values not visible except on one Aerovox, .005; which appears to be an 'output' of some sort. Wired with fabric wire and uses quite a lot of riveted construction.

Along the back of the paxolin sub chassis are five unmarked insulated screw terminals. Am assuming they will be; Antenna, Common negative (chassis), Heater, B+, Output. Tracing required. Presumably the output was in, say, the broadcast band to a regular receiver. With separately adjustable oscillator and tuning I suppose you could pick different

output frequencies and/or use the regular receiver for fine tuning! As per a Q5er.

Apart from the missing top cover from a components point of view it appears to be complete except that someone had drilled out the rivets of what was probably a transformer (or choke) mounted mid front below the chassis, you can also see four mounting tag marks and remains of two rivets! But cant see any missing wiring other than the potentiometer mentioned above.

As I prepare to trace out the circuit of this interesting item, I think I've got tube pin connections somewhere and possibly get it going, if possible, on the one set of coils in it (13 Mhz to 6.6 Mhz. which is a 2:1 ratio btw) can anyone offer advice or suggest any source for information. Any help would be appreciated.

Many thanks for reading.

Terry S. Newfoundland. About six to eight miles from where Marconi in 1901 received the first trans. Atlantic wireless message from Cornwall in England.

From: "KGL-900" <kgl900@giznet.com>
Subject: Astor Stereogram

Does anyone know of the following StereoGram:

Make: Astor
Model: Unknown (Possibly G18AA)
Made: 1968

The problem:

No ouput, from any of the inputs (gram, din, tv, radio)
(Although there is noise (like pink noise) coming from the left channel
amp)
The right channel amp is not producing anything.

I have been through and re-soldered all the joints, still no luck.
Does anyone have any idea what they fault may be?

Thanks;
Stew

Subject: Dritz is an ass hole ... and I am sorry!!! 2963

Hey all ... Yesterday I accidentally sent out an invite to my penpal and mailing list site ... thinking that it would be OK for the rec mailing list ... unfortunately there is this ass hole named dritz ... I think he is dritz@princeton.com or dritz@atlantic.net .... any way he is a real anal prick with no life. So I saw this other post on the internet with my email address on it and I emailed him and asked him what the deal was ... and why I was on this report ... and that I didnt know what I did wrong
and what I could do to rectify it ...

anyway this ass hole then goes back and tells his mommy and about anyone else he could think of about this issue ... he is such an anal prick ...

anyway I just wanted to send this mail to the rec newsgroup and let all of you know that I am sorry if I cause you any inconvenience at all ... and if I did I just wanted to appolgize.

If you want to contact me to discuss this please drop me an email at einstein@cuy.net I would really like to hear from all of you and we can discuss this off line. Thank you. einstein@cuy.net

=======
Hi Dave -- AVC is Automatic Volume Control -- when the incoming signal is
strong -- AVC cuts back on the receiver gain and vice versa. AVC tends to
keep a constant volume regardless signal fading.

MVC is Manual Volume Control where the receiver gain is controlled by the RF
GAIN knob (If you have one) -- otherwise the receiver is in a full gain
configuration.

Here is how one receiver AVC works:
AUTOMATIC VOLUME CONTROL - Delayed, amplified AVC gives constant output
within 6 db for a change in r-f
input from 5 microvolts to 0.5 volt. AVC is applied to the r-f stages and
three i-f stages. The proper amount of AVC delay is employed for maximum
sensitivity on weak signals.

Subject: Switch Question

The switch you mention is (automatic volume control) and(manual volume
control).. you may find that cw signals are more easily controlled in mvc
position, broadcast and other am will be fine on avc setting.. may be Kenwood
is a spin off from Lafayette , I heard about Lafayette long beforeI heard of
Kenwood.. have fun Harold W4PQW

Date: Sat, 12 Aug 2000 20:35:35 -0700
From: no@sp.am
Subject: Switch Question

MVC = Manual Volume Control
AVC = Automatic Volume Control

For voice/music, etc. AVC is probably best. It will tend to keep the gain
of the receiver such that the signal will remain fairly constant with
fading, etc. You can usually run the RF gain control up full and adjust the
volume by using the AF gain control for comfortable volume if you have the
AVC on.

For CW (code) or for SSB the usual process is to use MVC and turn the AF
gain 1/2 to 3/4 of the way up (or more) depending on how much hum is
produced and start with the RF gain all the way down and advance it until
you can hear the signal you're trying to tune in. Of course for both CW and
SSB you need to have the BFO (Beat Frequency Oscillator) turned on and
adjust its pitch while you rock the tuning back and forth to give the
strongest signal and a pleasant tone on CW and to make the voice as clear as
you can on SSB. Using MVC you provide the gain control by riding the RF
gain control. Once you've decided where you want the AF gain control, make
adjustments in how loud the signal is by adjusting the RF gain and keeping
the signal low enough so that it's not distorted.

If you try to read CW or SSB with the AVC on, since you must have the BFO on to introduce a beat signal for CW or to reinsert the missing carrier on SSB, the BFO signal will cause the AVC to decrease sensitivity to the point where you usually won't be able to hear the desired signal. More modern receivers will have a product detector which can operate with the RF gain full on on both CW and SSB.

No, Lafayette was a private label of (guess what?) Lafayette Radio and may have had Trio-Kenwood produce something for them but Kenwood is definitely NOT a derivative of Lafayette. Lafayette did not design and produce gear but put their label on other company's products.

Subject: WTB AMPHENOL MIC CONNECTORS

I am looking for 2 mic connectors for the E. F. Johnson line.

They are the 2 pin offset male connectors and would be used for the Ranger,
Valiant, or Viking 500

Any available out there?

Ralph

Subject: WTB AMPHENOL MIC CONNECTORS

Hello Ralph,

Mouser does not list them but I think Newark does. Look
under Wire Pro as the manufacturer. They should run
around $8 each.

BTW, I always look at the el cheapo mikes at a hamfest
because you sometimes can buy a mike for a dollar or so
with this connector on it.

good luck & 73,
Phil

Are you sure you are thinking of the 815? AFAIK, the 815 is a heater/cathode type, not a bright emitter filamentary tube. The 815 is a dual beam power tube, with 2 separate plate caps. Perhaps you are thinking of 811, 813, or 814?

I am selling off several pieces of my station so I may upgrade tosome newer equipment.

Ten Tec Paragon, model 585. Equipped with FM board, RS-232 interface, and voice board. Includes hand microphone and Astron RS-20 power supply. Functionally 100%, cosmetically 8 out of 10. Some minor cracking around screws on front panel, the lettering is rubbing off the LCK (lock) and TUNE buttons. Recently replaced several of the buttons on the control panel so it is working 100%. 6, 2.4, 1.8, 500, 250 filters included.
$800.00 firm plus shipping.

Kenwood TS-700A all mode 2 meter transceiver and out board linear amp. TS-700A equipped with sub repeater options. Functionally 9 out of 10, two of the grain of wheat bulbs are burned out. Internal 28V power supply recently rebuilt by AES Milwaukee so it is 100%. Cosmetically an 8 out of 10, normal minor scratches and dusty. Amplifier is a VJ-90, 1970ï¿½s company now out of business. Functional 6 out of 10. Transmit amp and auto T/R switch are fine, preamp dead. Never needed, TS-700A receiver is very good. Have original hand mic but element is dead. Includes manuals for TS-700A, no manual available for amp.
$275.00 firm plus shipping.

Kenwood TS-660 15, 12, 10, 6 meter transceiver. USB, CW, AM, and FM, 8-10W in, 4-5W out. Cosmetically an 8 out of 10, normal minor scratches and dusty. Includes MC-85 microphone, missing foam mic cover, Astron RS-12 power supply, and manuals. Has SSB and CW filter no AM filter.
$325.00 firm plus shipping.

Heathkit SB-401 transmitter. Includes transmit crystal pack. Cosmetically an 6-7 out of 10. Normal chipping and minor scratches on paint. Very little rust. Old masking tape residue on front panel. Missing top cover on RF cage. Unit is complete but I bought it and never tested it. I will include a Heathkit SB-400 replacement manual and a used mic connector for your mic.
$150.00 firm plus shipping.

All items I try to represent honestly as to true condition. Except for the Heathkit SB-401 which is sold As Is, all equipment is functional as described but no warranty is offered. If it arrives DOA, I will consider returns at 100% refund of all monies.

Shipping is real cost, no extra for packing but will be shipped insured. I use USPS but will ship Fedex at buyerï¿½s request plus the real cost for Fedex shipping. Check or money order, I will accept COD,

but I will add COD charge to the shipping cost. US buyers only, no international or US territories.

If you have any additional questions, please contact me by e-mail or evenings at home. My call is good in current call books within the last 4 years.

FS: This WWII ship's wall clock looks incredibly neat in any radio station. It is a black ship's wall clock, 8 day wind-up, radium dial, dated 1941 in its face, black face/radium white numbers, mfg by Seth-Thomas, removed from a WWII submarine, hinged mount for winding, known as a "Mark I" clock, and is in very nice physical condition. If you want the ultimate touch for your station, this is it. I want $425 for it. Mike, (979) 693-1461.

> Save your $$$$$ go to www.arrl.org for FREE TESTS ONLINE

Our software prides itself on being incredibly TIME efficient. We offer multiple testing modes, a slick interface, and a lot
of customizability. While it varies from person to person, it's not a stretch to conclude that you'd save about 6 or more
hours studying for a given test by using our software than by using the web-based tools. Isn't your time worth more than $5
an hour? And if you take more than one test (remember--our software comes with lifetime free upgrades)--isn't your time worth
more than $2.50 / $1.80 / $1.25 .. an hour?

Our software is very reasonably priced, and has exceptional feedback from its users who value their time. We sell a great
product at a very nice price. While we mean no disrespect to our friends at ARRL, remember: you can also save "$$$$$" on
rock salt for when it snows by taking those packets home from McDonalds... :)

cheers,

Adrian

John:

You can get "Dri-Transfer" labels from Antique Electronics Supply at
<http://www.tubesandmore.com>. Get the set for Amateur Radio and CB.
You will find words like TUNING, BANDSPREAD, BFO, VOLUME, STANDBY, etc.
They work very well.

From: Jeff Goodspeed <cmsx42@email.mot.com>
Message-ID: <39985AEE.3EEB23E7@email.mot.com>
Source record: 62610

Greetings BA Aficionados:

I need a name to identify my radio buying/using tendencies (like you associate with the name ï¿½Boat Anchorsï¿½).

A few decades ago, I started out in Ham radio as an under funded teenager. I sought whatever radio gear I could gather that would provide me with the most functionality I could achieve within my scarce budget. At that time, it meant that I ended up with a rich litany of Boat Anchor gear. I would only hold onto one radio long enough until I could accumulate additional cash, coupled with the selling of my current BA, to move up to a more capable BA. At that time, there were no romantic collectorsï¿½ pressures on the commerce of older radios. Mostly, older hams were glad to off load these space wasters on the young punks. I learned a lot from repairing and modifying these rigs and I did not feel any pressure to maintain the rigs pristine virgin status. At that time, these rigs had no collectorï¿½s value.

Fast forward through time, add a spare tire and some gray hair, and I find myself with much the same attitude toward radios. I still get a kick out of buying someoneï¿½s used radio, cast off in favor of the latest Japanese bell-n-whistle box. I love to pick up a broken radio ï¿½ dirt-cheap, drop $30 worth of parts into it and have it radiating into the ionosphere once again. It would be even more satisfying if I could hand it off to an under funded neighborhood teenager, but I digress.

I donï¿½t feel comfortable amongst the BA crowd. Donï¿½t get me wrong, I love the warm glow of hollow state technology (though Iï¿½m not obsessed by it) and have a lot of fond memories of placing my fingers on and in these old beauties. I like radios where you need to rock the band switches and twittle the knobs. But they have become priced out of my comfort range (I call it, being a cheapskate thank-you). I feel a social obligation not to violate a Boat Anchors original condition by keeping my fingers out of it (half the fun if you ask me). Iï¿½m just the kind of guy who would homebrew an IC Xtal calibrator and shoe horn it into a BA (screams of horror!!) instead of spending months hunting down the original tube calibrator option and paying big $$$ for it.

So Iï¿½m steering clear of the BA world. But there are still opportunities out there if only I could place a name on them. There is a genre of forgotten rigs which fall in between the BA era and the current uP appliances. Many of these rigs were solid state/vacuum tube hybrids with little or no digital components. I think most hams refer to these old radios as ï¿½Backup rigsï¿½. A backup rig is an old radio, sitting on your storage shelf thatï¿½s lost its re-sale value. It just isnï¿½t worth the bother trying to get rid of it.

I donï¿½t think anyone would label it a ï¿½hate crimeï¿½ if I were to stick my fingers into one of these radios to tinker and modify. Would anybody really care if I were to drill a hole into the front panel of a TS-520 to add a switch? Not many anyway.

So give me a name for these radios. If you make the name sound fun and catchy, then maybe other nar-do-wells like me might leave your pristine BAï¿½s alone and move on to our new stomping grounds.

73ï¿½s - Jeff - KA9S

P.Sï¿½As a matter of personnel taste, I think radios should be as large as possible. They should have dials, not digits, and have lots of knobs that are large enough to wrap oneï¿½s fat fingers around. You shouldnï¿½t have to squint to read the labeling on a radio. One knob should have one function. To heck with tiered, multi-function menu systems. They should emit a faint hum that jumps and undulates as you transmit. And if the dial lights dim a little at the same time ï¿½ well, thatï¿½s OK to. A real radio would completely occupy your peripheral vision and let you know that your are working with something really impressive.

Just because a string of gasoline shortages has forced us to drive ever diminishing automobiles is no reason to compress the size of radios we place in our houses. Big is beautiful baby!

I'll chime in on this one and say that I thought the software was very good. I had used some of the online tests, but I found that they were not a time efficient. I also found the software to be very versatile so that I could do a lot more custom things with it which I think helped me a great deal.

And no I don't work for them, and no they did not ask me to post this. I just thought I would toss in my 2 cents worth because I was pleased with the software.

When my XYL noticed the copper pipe loop antenna on top of my truck's camper shell she called me "Eccentric". Or my 75 meter dipole growing like a bean stalk out of her garden. I think that she has actually grown to see my gray BC-779 and B&W 5100 as somewhat artistic. Maybe if you stretch it a bit we're kind of the artisans of the day. Forming our artistic statements out of the discards of a bygone era. Not one of them running a "Program". Not one could be called "Intelligent". Paperweights each and every one.

Carl would have the parts he's looking for, I just purchased the same
thing from an SB-220 from him. Caps go for about $35 each ppd.

Dean,
If you or anyone else reading this does an SB-200 Harbach power supply pc
board retrofit, I want to buy your old hv pc board, working or not. It's
got to be a heck of a lot better than the charcoal bbq version (lightning
strike) I have now...

email me direct
thanks

I like "boat anchors" too...always have always will. My early experience with this hobby were pretty close to yours. Therefore i have to name em Cool!! Radios should be tough, there was a guy in another group that dropped the corner of a newer radio about 4 inches and grenaded the filaments on the panel lamps. You could drop a BC-384 four FEET and dust it off and it would work just fine.

Source record: 62619

I just got finished re-capping (100%) a DOA Hammarlund HQ-120.
Virtually all the caps (Corny-Dub. "Tiger" brand) were leaking and most
were unmeasurable, capacitance-wise. Its working just fine now.
Question is, I also have an SX-28 ('42) that still has all the original
Sprague caps in it and it works perfectly (not that some of the caps
aren't a bit long of tooth). Are these "tigers" akin to the
black-beauties in the reliability arena? Thanks for any insight.

595. FS: MFJ 1278B DSP Multimode Data Controller

Source record: 62621

I need a few high wattage fixed resistors:

1- 50 ohms @ 25 watts
1- 20,000 ohms @ 100 watts
1- 50,000 ohms @ 100 watts
1- 150,000 ohms @ +/-225 watts

The last resistor, 150K, is for a HB power supply and can be made up
of
2 or three resistors adding up to 150K or so. Its a bleeder and not
critical. Buy or trade.

"
> Any suggestions where one might find 51J4 mechanical filters in any
condition?
> I have tried Surplus Sales to no avail.
>
> Thanks.
> J Ballard

JB:

I bought a 51J-4 at a surplus yard about 15 years ago for $20.00. It was sitting on a pile of junk and didn't look too good. It had been stripped of its filters before being discarded, and the slug rack was out of mechanical alignment. It was a relatively easy job to fix the slug rack, but filters were another problem.

I found a 9 kc Collins filter at a flea market with the right center freq (500 kc) and correct pin spacing, and although it was not meant for the 51J-4, it works beautifully. 9 kc gives great audio on AM. I got the filter for $5. Clearly these were the days before the Collins collectors got into a feeding frenzy and drove the prices to their present levels.

For a SSB filter I am using one salvaged from a Collins 618-T. It is a round cylinder with solder lugs, so I had to make a carrier for it out of circuit board material, with the proper pin spacing. The pins on the 51J-4 filter are the same as on HC-6U crystals, so you can make connectors from defunct crystals, or sacrifice some useless crystals for a better purpose.

The 618-T used different circuit capacitance to resonate with the mechanical filter's transducer coils, compared to the 51J, so I had to add some parallel inductance across the filter terminals to optimize the filter performance.

Hope these ideas help.

By the way, I still have some of the 618-T filters, but only in the SSB bandwidth. I haven't yet found a CW bandwidth filter, but perhaps someday I will find one.

Roger K6XQ

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com. (aka http://www.hamexam.com -- easy to remember address--tell your mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's less than $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

Still have the Millen antenna tuner / with the meter and copperclad chassis. Front panel needs some touchup but in decent shape. Also have the manual too. $125 plus shipping.
Have 3 HRO 5s for sale-all very good w/ full sets of coils in the storage boxes and manuals. Recent active estate so gear was kept up.The receivers are consigned by estate to Dick-K1RAW and myself.. 2 have s meters and 1 is a Navy version with no s meter and rack panel front. Have 1 Dog house ps, 1 double power supply, and 1 homebrew supply. There is I believe some spare tubes as well and maybe a few sets antique headfones. I just brought these here a few days ago. At the moment we are taking offers. We don't use E bay and dont want to start-HI!!!
Lastly- there are a goodly amount of either new and or good tested tubes. Many Taylor types etc. I will try get list this week. May sell the whole lot very reasonable. I will repost inre. Thanks all and 73s Lew-KlNDV
Oh 1 more thing-there are 2 home brew on wood antique transmitters and ps with the 1934 design (qst) documents.

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone

7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com / http://www.hamexam.com

Subject: Astor Stereogram

Dear Stew,

You don't mention whether the radiogram is solid state or uses valves. However, it might be worthwhile running voltage checks on each channel, as well as trying to trace the signal paths. A common fault in elderly audio equipment is dirty switches. These can present an exceptionally high impedance/resistance to a small signal, such that the signal just doesn't get through. In the UK we can buy Super Servisol, an aerosol switch cleaner, which does the job. There is a warning about certain plastics that can be attacked by the cleaner, but I've never had any problems with it. I have "fixed" at least three audio items using this stuff. I don't know if it is sold in the USA, but there will be an equivalent product.

The best of luck!

From: Bob Weiss
Subject: FS: Pair of 815 Transmitting tubes.

Are you sure you are thinking of the 815? AFAIK, the 815 is a heater/cathode type, not a bright emitter filamentary tube. The 815 is a dual beam power tube, with 2 separate plate caps. Perhaps you are thinking of 811, 813, or 814?

speaking of 815 tubes, the best homebuilt rig I ever used was an 815 in the final and 815 modulator working mostly on 10 meters , the happiest times of my ham career was building these old rigs and working 10 meters AM.. I believe some of this old 815 stuff was in the early Orr Handbooks ..73 Harold W4PQW

Subject: Hallicrafters S-20R

Hello Everyone,

I have a Hallicrafters S-20R that I'm trying to restore. I'm trying to gather info first. My question, is how do you go about restoring the front cabinet. What I want to do is repaint it and I'm having to figure out what to do with the knob titles that are inscribed into the metal and painted white.

Any suggestions?

Tks,

John

From:
Subject: Heathkit Receiver AR-3

Would anyone have a manual for the Heathkit AR-3 Receiver. I was given one that is in poor but salvageable condition and I'd like to return it to use.

It also has an unoriginal tuning and bandswitch knobs if anyone had spares to sell or trade.

I'd gladly pay for copying/postage or swap for manual copies, parts etc.

Many thanks!

- Gary

The 6KV6A is equivilant to a 17KV6A and a 22KV6A. I don't have
anything on the 8417.

The 6KV6A is a Color TV type Shunt Regulator tube.

Dear Fellow Boatanchor Enthusiasts,

Would anybody know equivalent numbers for the following tubes, some of which
might be used in Drake gear?

8417, 6KV6A.

Thanks and 73,

Evan

From:
Subject: Need tube cross ref info

Evan -

8417 is a uncommon audio output tube, used in the Dynaco Mark VI and
Quicksilver 8417 among others. They have gotten fairly pricey as there is
no good substitute. There is no equivalent although KT88's can be
substituted in many cases with substantial modifications.

Subject: Need tube cross ref info

The 8417 is a beam power tube, once commonly used in audio service.
Discontinued, and getting quite scarce and pricey these days. Perhaps the
circuit could be modified to use a 6550 or other easier to get tube.

From: Terry Sanford
Subject: Victor Short Wave Adaptor.

Looking for something else I came across a 'short waver converter?

Brown crackle cabinet (top missing), wooden base. Unit is 17 inches wide, 10 inches deep and 8 inches high. Knobs missing. Overall condition 'fair'; maybe a three or a four on scale of 10.

At first glance it looks like a 1930s radio receiver. I was puzzling over the make until I noticed the small "His Master's Voice" symbols moulded into the two, what I will call the 'escutcheons', through which you view the 'tuning' dials. 0 to 100. Then I found the original label on the bottom!
"Victor Short Wave Adaptor; Range 16.5 to 110 meters. " and "Victor Division, RCA Victor Company, Inc. Camden. N.J. U.S.A."

The two cord driven metal tuning dials tuning dials are each coupled to a single gang variable capacitor which are guessed to be 200 pfd. variety with wider spacing than later variable capacitors. One must be 'tuning' and the other 'oscillator'?

Also projecting through the front panel are a rotary on/off switch and a potentiometer which I've just noticed is marked "Feb12 1931 'From Magnetic Phono Cartridge' '4513'." judging by the wiring, what looks resoldered and an incorrect shaft length this may not be an original item? (Idea? Could be a reaction control!) Unless it was modified; see item removed below.

Inside the case there is a metal removable chassis on which there is a black paxolin board riveted to the main chassis mounting five (five

pin) sockets. The five sockets are; UY224 (also a top cap wire), ANT (into which a single winding 'ANT' coil marked "23-45 M" {presumably metres?}is plugged, UY227, OSC coil (similar with two windings), UY227.

Tubes are out but I think I've got two of them somewhere. I don't think my '30 year old' tube tester which is also "somewhere" has a that kind of socket on it!

Underneath there are a number of metal cased capacitors, three brown plastic Aerovox USA capacitors and three carbon composition resistors. Values not visible except on one Aerovox, .005; which appears to be an 'output' of some sort. Wired with fabric wire and uses quite a lot of riveted construction.

Along the back of the paxolin sub chassis are five unmarked insulated screw terminals. Am assuming they will be; Antenna, Common negative (chassis), Heater, B+, Output. Tracing required. Presumably the output was in, say, the broadcast band to a regular receiver. With separately adjustable oscillator and tuning I suppose you could pick different output frequencies and/or use the regular receiver for fine tuning! As per a Q5er.

Apart from the missing top cover from a components point of view it appears to be complete except that someone had drilled out the rivets of what was probably a transformer (or choke) mounted mid front below the chassis, you can also see four mounting tag marks and remains of two rivets! But cant see any missing wiring other than the potentiometer mentioned above.

As I prepare to trace out the circuit of this interesting item, I think I've got tube pin connections somewhere and possibly get it going, if possible, on the one set of coils in it (13 Mhz to 6.6 Mhz. which is a 2:1 ratio btw) can anyone offer advice or suggest any source for information. Any help would be appreciated.

Many thanks for reading.

Terry S. Newfoundland. About six to eight miles from where Marconi in 1901 received the first trans. Atlantic wireless message from Cornwall in England.

I bought an old Sparton converter several years ago, and found the wiring diagram in the RCC manuals at the library...I believe the year was 1929. What you have should be somewhere between 1927-1933.

Subject: WDX calls/Hank Bennett W2PNA

Someone wandered down this path once before looking for the WPE and WDX SWL callsigns. There is a WPE website someplace and Popular Electronics has an interactive e-mail capability so you might check with them. Of course, I may be confusing Hank Bennett with Tom Kneitel as they were both involved in that at one time or another. Tom is with Popular Communications (and CQ?) now and may be a source of some leads.

Sorry I do not have anything more specific.

Subject: Boatanchor Manuals F.S.

I'm cleaning out my library. I have the following COPIES of manuals for sale. Most are bound and are copies of the originals. Payment by Money Order or Cashier's Check only or I will wait until personal check clears.
Please add $3.20 priority mailing for each order.

Hammarlund HQ-170A Operator's Manual.....$15
Heathkit HO-10 Monitor Scope Assembly Manual $10
Instruction Book For Collins Radio Receiver R-391/URR....$10
Instruction Book For Collins 75S-1 Receiver.....$10
Instruction Book For Collins 75A-4 Receiver.....$20
Drake T-4XB/T-4 Reciter Instruction Manual.....$10
Drake 2-C Receiver Instruction Manual.....$10
Drake T-4XC Transmitter Instruction Manual.....$10
Kenwood R-5000 Instruction Manual.....$10
Kenwood TS-450S/690S Service Manual.....$20
RME 6900 Operator's Manual.....$10
Hallicrafters SX-101A Operating and Service Instructions.....$10
National NC-155 Receiver Instruction Manual.....$10

If interested, please email privately.....w5lx@flash.net
Thanks.

FYI, in your auction copy, you mention the radio receives AM with
synchronious detection. I have the same radio. This model has no
synchronious detection. The fade on distant AM stations can be rather
severe.

Subject: FS Collins R390 Connector

For Sale

Two coaxial connectors for the Collins Radio R390 series.
(I think they were called twinex connectors)

These screw on the back of the receiver antenna RF input.

Part number is UG-421B/U

These are used and have about four inches of coax sticking out of them.
The connectors are in very good shape.

Would like $15 each postage paid and shipped anywhere in the mainland
U.S.A.
Will sell one or both.

Thanks.

> model, the comparisons won't be very far apart.
>

Absolutely. If you get an SX-100 that hasn't had its tuning cap corrode,
it's really pretty stable -- and is really one of the most sensitive radios
of the 50s with nice selectable sideband and decent selectable bandwidth (as
opposed to the stupid single crystal "filters" with the shape factor of
about 30:1 as in contemporary Nationals and Hammarlunds).

Don't get me wrong - I love 'em all. It's just interesting to compare
design philosophy amongst the different manufacturers 40 years later, and
see which designs held up or actually led the way.

Here are a few observed strengths/weaknesses of the 4 major manufacturers of
the 40s-50s:

Collins: Good: beautiful construction, stable, linear tuning. Bad: paint,
audio distortion, too conservative of a design (until the -J4/A4)

National: Good: paint, smooth tuning, outstanding tuning caps, very easy to service. Bad: power transformers, image/intermod products, tough/unconventional alignment (just TRY to align a drawer in a HRO 50/60!)

Hallicrafters: Good: innovative design (especially for the money), tuning, fidelity (on the higher grade radios such as the 28, 42, 62, and 88). Bad: knobs, ease of service (ever replace bypass caps in the RF section of a -28?), nasty striped bypass caps, mechanical stability

Hammarlund: Good: mechanical design, stability, ease of service. Bad: paint, ease of service (SP-600 only), *very* conservative design

Hope this starts a flame war. I'm sick of just reading FS/FA ads on this NG!

73 John

Yup! It was, as were almost all, of the Halicrafters of that era, a gereral coverage receiver that had band edge marks on one dial and the band spread on the other dial.

Considering the era they were a pretty good receiver. Actually they were some of the better generally available receivers of the time. They sure don't stand up well compared to todays stuff though <:-))

At one time they had the SX-100, HT32 and HT-32 (not A or B) in a console. I think this was around 1960-62.

Certainly if you had the money the 75A series were better (As I recall they were available about the same time)

But, get the prices down! I'm trying to collect the whole series of an SX115, HT-32B and HT33B <:-))

Subject: Hallicrafters s-38e BFO tuning question

I have acquired at a yard sale this weekend an almost mint conditon
s-38e with original tubes and it works perfectly for $10. I have cleaned
it up and do not have a manual for it so I am wondering how to I use
the variable BFO knob on the back of it? I have received some ham
operators and can hear them ok sometimes others not good. How
do I set this control properly and do I have to reset it constantly or
set it and forget it? Any help appreciated!

The BFO, (which stands for Beat Frequency Oscillator) is only required for CW
(Morse code) and SSB (Single Sideband) reception. The front panel control turns
it on and off as needed, and the adjustment in the back sets its frequency.
Normally, after the set has completely warmed up, you would just tune in any
strong AM station for maximum volume, then turn on the BFO and adjust the rear
panel control for zero beat. (The point where the whistle frequency goes to
zero.) It should then be possible to tune in sideband stations with just the
main tuning and bandspread controls. This adjustment is provided because the
oscillators do tend to drift a little as the set ages, so you may have to
re-adjust that control from time to time. Enjoy your S-38, it's a good starter
SWL receiver.

Don't use the tranny from a microwave unless you can find and remove
the flux shunts. If you do not remove them, the regulation will
positively suck. Ask me, I know. I built a 400w 4CX250 amp based on
a microwave tranny. What a learning experience!!!.

Subject: Turbo Viking 1 FS

EFJ Viking 1 Looks like new and STOCK on the outside. Cabinet has nice powder coat paint. Has a supercharged HIGH Power PM setup inside and has been rated one of the best sounding HI-FI quality AM rigs out there. Ptt etc. Has VFO with it. It is one of a kind. 650.00 and would prefer pick up in Mass. as I don't think you will want to ship this item. I have pics. and info sheets on the build.
TMC GPR-90 to go with it as a station if your interested or maybe a National NC-183D? your choice. Both Total resto pieces. Talk to me on those as price will depend on if they go with the Viking or not.
So you want to go Vintage and sound like the Channel Master on AM? Here is your chance. No tire kicking please. Thanks folks.

Subject: Value of Johnson Matchbox? "7" rating?

Thinking of putting a Johnson Matchbox, the KW style, with the SWR coupler, up for sale or on Ebay. This one is ok inside but the cosmetics leave something to be desired. Outside knobs are fine, meter looks fine, but their is a flaw. The holes for the switch and pot for the SWR adjustments were enlarged for some reason and you can see a slight gap around the washers. Also, there were four holes drilled in the front panel, and a nut and bolt inserted in each, not sure why; holes are approximately on a diagonal from each meter corner and maybe 3/8 inch away. So I'd give the outside about a rating of "7". Don't see these for sale too often and wonder what the concensus is about the value of such an item. Not sure why people do this to gear but it is their right, much to others' disappointment.

Harold W4PQW

Dang, I didn't know the 815 was two 2E26s! (Open large book of things I didn't know and make another entry...) Makes perfect sense, though.

Speaking of 10 meters, does anybody know how 807s behave up there? How about 5933s (shorty 807s). I've never built a 10 m rig, but I've been feeling a bit of an itch lately.

73,
Mike, KK6GM

> Save your $$$$$ go to www.arrl.org for FREE TESTS ONLINE

Our software prides itself on being incredibly TIME efficient. We offer multiple testing modes, a slick interface, and a lot
of customizability. While it varies from person to person, it's not a stretch to conclude that you'd save about 6 or more
hours studying for a given test by using our software than by using the web-based tools. Isn't your time worth more than $5
an hour? And if you take more than one test (remember--our software comes with lifetime free upgrades)--isn't your time worth
more than $2.50 / $1.80 / $1.25 .. an hour?

Our software is very reasonably priced, and has exceptional feedback from its users who value their time. We sell a great

product at a very nice price. While we mean no disrespect to our friends at ARRL, remember: you can also save "$$$$$" on
rock salt for when it snows by taking those packets home from McDonalds... :)

cheers,

Adrian

I'll chime in on this one and say that I thought the software was very good. I had used some of the online tests, but I found that they were not a time efficient. I also found the software to be very versatile so that I could do a lot more custom things with it which I think helped me a great deal.

And no I don't work for them, and no they did not ask me to post this. I just thought I would toss in my 2 cents worth because I was pleased with the software.

Subject: FS: Millen 1KW antenna tuner/ HRO5s /tubes

Still have the Millen antenna tuner / with the meter and copperclad chassis. Front panel needs some touchup but in decent shape. Also have the manual too. $125 plus shipping.
Have 3 HRO 5s for sale-all very good w/ full sets of coils in the storage boxes and manuals. Recent active estate so gear was kept up.The receivers are consigned by estate to Dick-K1RAW and myself.. 2 have s meters and 1 is a Navy version with no s meter and rack panel front. Have 1 Dog house ps, 1 double power supply, and 1 homebrew supply. There is I believe some spare tubes as well and maybe a few sets antique headfones. I just brought these here a few days ago. At the moment we are taking offers. We don't use E bay and dont want to start-HI!!!
Lastly- there are a goodly amount of either new and or good tested tubes. Many Taylor types etc. I will try get list this week. May sell the whole lot very reasonable. I will repost inre. Thanks all and 73s Lew-KlNDV
Oh 1 more thing-there are 2 home brew on wood antique transmitters and ps with the 1934 design (qst) documents.

Subject: FS: US Navy ships clock

FS: This WWII ship's wall clock looks incredibly neat in any radio station. It is a black ship's wall clock, 8 day wind-up, radium dial, dated 1941 in its face, black face/radium white numbers, mfg by Seth-Thomas, removed from a WWII submarine, hinged mount for winding, known as a "Mark I" clock, and is in very nice physical condition. If you want the ultimate touch for your station, this is it. I want $425 for it. Mike, (979) 693-1461.

From: Jeff Goodspeed
Subject: I need a name

Greetings BA Aficionados:

I need a name to identify my radio buying/using tendencies (like you associate with the name "Boat Anchors").

A few decades ago, I started out in Ham radio as an under funded teenager. I sought whatever radio gear I could gather that would provide me with the most functionality I could achieve within my scarce budget. At that time, it meant that I ended up with a rich litany of Boat Anchor gear. I would only hold onto one radio long enough until I could accumulate additional cash, coupled with the selling of my current BA, to move up to a more capable BA. At that time, there were no romantic collectors' pressures on the commerce of older radios. Mostly, older hams were glad to off load these space wasters on the young punks. I learned a lot from repairing and modifying these rigs and I did not feel any pressure to maintain the rigs pristine virgin status. At that time, these rigs had no collector's value.

Fast forward through time, add a spare tire and some gray hair, and I find myself with much the same attitude toward radios. I still get a kick out of buying someone's used radio, cast off in favor of the latest Japanese bell-n-whistle box. I love to pick up a broken radio ' dirt-cheap, drop $30 worth of parts into it and have it radiating into the ionosphere once again. It would be even more satisfying if I could hand it off to an under funded neighborhood teenager, but I digress.

I don't feel comfortable amongst the BA crowd. Don't get me wrong, I love the warm glow of hollow state technology (though I'm not obsessed by it) and have a lot of fond memories of placing my fingers on and in these old beauties. I like radios where you need to rock the band switches and twittle the knobs. But they have become priced out of my comfort range (I call it, being a cheapskate thank-you). I feel a social obligation not to violate a Boat Anchors original condition by keeping my fingers out of it (half the fun if you ask me). I'm just the kind of guy who would homebrew an IC Xtal calibrator and shoe horn it into a BA (screams of horror!!) instead of spending months hunting down the original tube calibrator option and paying big $$$ for it.

So I'm steering clear of the BA world. But there are still opportunities out there if only I could place a name on them. There is a genre of forgotten rigs which fall in between the BA era and the current uP appliances. Many of these rigs were solid state/vacuum tube hybrids with little or no digital components. I think most hams refer to these old radios as "Backup rigs". A backup rig is an old radio, sitting on your storage shelf that's lost its re-sale value. It just isn't worth the bother trying to get rid of it.

I don't think anyone would label it a "hate crime" if I were to stick my fingers into one of these radios to tinker and modify. Would anybody really care if I were to drill a hole into the front panel of a TS-520 to add a switch? Not many anyway.

So give me a name for these radios. If you make the name sound fun and catchy, then maybe other nar-do-wells like me might leave your pristine BA's alone and move on to our new stomping grounds.

73's - Jeff - KA9S

P.S"As a matter of personnel taste, I think radios should be as large as possible. They should have dials, not digits, and have lots of knobs that are large enough to wrap one's fat fingers around. You shouldn't have to squint to read the labeling on a radio. One knob should have one function. To heck with tiered, multi-function menu systems. They should emit a faint hum that jumps and undulates as you transmit. And if the dial lights dim a little at the same time " well, that's OK to. A real radio would completely occupy your peripheral vision and let you know that your are working with something really impressive.

```
Just because a string of gasoline shortages has forced us to drive ever
diminishing automobiles is no reason to compress the size of radios we
place in our houses. Big is beautiful baby!

I like "boat anchors" too...always have always will. My early experience with this hobby were pretty close to yours. Therefore i have to name em Cool!! Radios should be tough, there was a guy in another group that dropped the corner of a newer radio about 4 inches and grenaded the filaments on the panel lamps. You could drop a BC-384 four FEET and dust it off and it would work just fine.

When my XYL noticed the copper pipe loop antenna on top of my truck's camper shell she called me "Eccentric". Or my 75 meter dipole growing like a bean stalk out of her garden. I think that she has actually grown to see my gray BC-779 and B&W 5100 as somewhat artistic. Maybe if you stretch it a bit we're kind of the artisans of the day. Forming our artistic statements out of the discards of a bygone era. Not one of them running a "Program". Not one could be called "Intelligent". Paperweights each and every one.

Subject: I need a name

Greetings BA Aficionados:

I need a name to identify my radio buying/using tendencies (like you associate with the name ?Boat Anchors?).

A few decades ago, I started out in Ham radio as an under funded teenager. I sought whatever radio gear I could gather that would provide me with the most functionality I could achieve within my scarce budget. At that time, it meant that I ended up with a rich litany of Boat Anchor gear. I would only hold onto one radio long enough until I could accumulate additional cash, coupled with the selling of my current BA,

to move up to a more capable BA. At that time, there were no romantic collectors' pressures on the commerce of older radios. Mostly, older hams were glad to off load these space wasters on the young punks. I learned a lot from repairing and modifying these rigs and I did not feel any pressure to maintain the rigs pristine virgin status. At that time, these rigs had no collector's value.

Fast forward through time, add a spare tire and some gray hair, and I find myself with much the same attitude toward radios. I still get a kick out of buying someone's used radio, cast off in favor of the latest Japanese bell-n-whistle box. I love to pick up a broken radio ' dirt-cheap, drop $30 worth of parts into it and have it radiating into the ionosphere once again. It would be even more satisfying if I could hand it off to an under funded neighborhood teenager, but I digress.

I don't feel comfortable amongst the BA crowd. Don't get me wrong, I love the warm glow of hollow state technology (though I'm not obsessed by it) and have a lot of fond memories of placing my fingers on and in these old beauties. I like radios where you need to rock the band switches and twittle the knobs. But they have become priced out of my comfort range (I call it, being a cheapskate thank-you). I feel a social obligation not to violate a Boat Anchors original condition by keeping my fingers out of it (half the fun if you ask me). I'm just the kind of guy who would homebrew an IC Xtal calibrator and shoe horn it into a BA (screams of horror!!) instead of spending months hunting down the original tube calibrator option and paying big $$$ for it.

So I'm steering clear of the BA world. But there are still opportunities out there if only I could place a name on them. There is a genre of forgotten rigs which fall in between the BA era and the current uP appliances. Many of these rigs were solid state/vacuum tube hybrids with little or no digital components. I think most hams refer to these old radios as 'Backup rigs'. A backup rig is an old radio, sitting on your storage shelf that's lost its re-sale value. It just isn't worth the bother trying to get rid of it.

I don't think anyone would label it a 'hate crime' if I were to stick my fingers into one of these radios to tinker and modify. Would anybody really care if I were to drill a hole into the front panel of a TS-520 to add a switch? Not many anyway.

So give me a name for these radios. If you make the name sound fun and catchy, then maybe other nar-do-wells like me might leave your pristine BA's alone and move on to our new stomping grounds.

73's - Jeff - KA9S

P.S'As a matter of personnel taste, I think radios should be as large as possible. They should have dials, not digits, and have lots of knobs that are large enough to wrap one's fat fingers around. You shouldn't have to squint to read the labeling on a radio. One knob should have one

function. To heck with tiered, multi-function menu systems. They should emit a faint hum that jumps and undulates as you transmit. And if the dial lights dim a little at the same time well, that s OK to. A real radio would completely occupy your peripheral vision and let you know that your are working with something really impressive.

Just because a string of gasoline shortages has forced us to drive ever diminishing automobiles is no reason to compress the size of radios we place in our houses. Big is beautiful baby!

Nah. Jeff you are really a 'Boat Anchorer' at heart I suspect.

Drop the tough/practiacl exterior and get nostalgic like the rest of us!
.
I recently dragged a 90 pound, 60 year old monster back from the UK, getting
it under the 70 pound limit for check in baggage by partiallly dismantling
it on somebody's dining room table, carrying the power supply portion in my
hand luggage, the tubes in my briefcase and secreting various bits in other
luggage. Why? Cos I had one of those when I was a late teenager some 50
years ago! Call me sentimental, OK? Works too!

You may have a point; but in 30 years time someone will be saying I wonder
why grandad .....looks like it's been "Jeffed up"!

All the best. Terry S.

JB:

I bought a 51J-4 at a surplus yard about 15 years ago for $20.00. It was sitting on a pile of junk and didn't look too good. It had been stripped of its filters before being discarded, and the slug rack was out of mechanical alignment. It was a relatively easy job to fix the slug rack, but filters were another problem.

I found a 9 kc Collins filter at a flea market with the right center freq (500 kc) and correct pin spacing, and although it was not meant for the 51J-4, it works beautifully. 9 kc gives great audio on AM. I got the filter for $5. Clearly these were the days before the Collins collectors got into a feeding frenzy and drove the prices to their present levels.

For a SSB filter I am using one salvaged from a Collins 618-T. It is a round cylinder with solder lugs, so I had to make a carrier for it out of circuit board material, with the proper pin spacing. The pins on the 51J-4 filter are the same as on HC-6U crystals, so you can make connectors from defunct crystals, or sacrifice some useless crystals for a better purpose.

The 618-T used different circuit capacitance to resonate with the mechanical filter's transducer coils, compared to the 51J, so I had to add some parallel inductance across the filter terminals to optimize the filter performance.

Hope these ideas help.

By the way, I still have some of the 618-T filters, but only in the SSB bandwidth. I haven't yet found a CW bandwidth filter, but perhaps someday I will find one.

Subject: Paper capacitor question

I just got finished re-capping (100%) a DOA Hammarlund HQ-120.
Virtually all the caps (Corny-Dub. "Tiger" brand) were leaking and most
were unmeasurable, capacitance-wise. Its working just fine now.
Question is, I also have an SX-28 ('42) that still has all the original
Sprague caps in it and it works perfectly (not that some of the caps
aren't a bit long of tooth). Are these "tigers" akin to the

black-beauties in the reliability arena? Thanks for any insight.

I have a very rare Gonset combination CW oscillator/station monitor from the mid 1950's. It has a built-in speaker, pitch control & CW/AM monitor selector. Connection for RF sensing is in the rear. The unit is working; but has a hum & is sold 'as is' due to its age (sounds like it needs some caps replaced). I have a picture available. $40 plus s & h from Schenectady, NY

I have been looking around and the part that I need is difficult to find. I am building a link-coupled antenna tuner from the 1984 ARRL handbook.
I need a 3 pole, 5 position ceramic switch to complete the project.

Surplus sales has one, but it costs a fortune. Anyone on here know of where I can find an alternative please email me.

639. Speed-x bug value?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-15 00:00:00 UTC
From: stephanie shanblatt <shanblat@tcimet.net>
Message-ID: <3999A69A.E66F26CF@tcimet.net>
Source record: 62702

I just acquired a Speed-X bug model 515. The box and the key say Les Logan, Co, San Francisco, so I assume this is before EF Johnson bought out Speed-X. The bug is virtually unused, in the original box with the original instruction sheet dated September 15, 1941.

I would like to sell it, but before I do so blindly, I wonder if someone might help me ascertain its value. Any help or leads would be appreciated.

tnx

Mike

Message-ID: <3999B094.AAFF1571@snowhill.com>
Source record: 62703

FS: mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. Email or call 334-347-5281 day/eve/wknd.

641. FS: New LS-3 military speaker

A single 807 gives me 25-30watts out in my old Knight-kit T-50. That
is class C. According to the 1968 handbook, with a pair of 807s in
AB2, 750v on the plate and 300 on the screen you would get about 120
output. I don't have a schematic. Pick up a old handbook. I'm sure
youcan find something there. Also be aware that a 1625 is the same
tube except for the filament.

You should emphasize that these are NOT 60 Hz generators. They are apparently the generators that are used for making ring voltage for telephones. Probably just fine if you don't mind the frequency being whatever you crank it to. Jim

While this is only tangentially related to Radio's, I suspect there will never be a Dekatron newsgroup!

For some strange reason I've become fascinated with Dekatrons and other counting tubes - I'm looking for some more to play with, and would like to purchase or swap for any of them, including:

7 pin miniature: 7155, 6879
Octal: GC10B, 6802, 6909, Z303C
12/13 pin: GS10C, 6476/A, 6910, Z502S, 7978

Also spec sheets/literature would be very welcome.

I wouldn't mind a few inexpensive nixie tubes as well.

I have a good assortment of more "conventional" tubes to swap etc.

My first Decatron construction is below:

http://www.the-planet.org/dekatrn.jpg

Many thanks,

- Gary

Hi Mike:

I am not an expert, but I do have about 10 bugs. The bug you have is not real common, although not uncommon. Because it is virtually new, it probably will bring a premium.

I would guess one in good condition would bring $100. However, because they do not make them anymore, and because all you need is one collector who is willing to pay extra for one in that condition, it may be worth at least a few hundred dollars. So, expect $100 and be pleased if you get $200. It should bring joy to someone.

good luck, Colin K7FM

657. FS: GE LO-BAND PROGRESS LINE BASE

General Electric "Progress Line" Lo-Band FM Base station - 30 watt model with 6146 final. It has a built-in 117 volt a/c power supply and speaker. You will need a microphone. I'm hearing maintenance trucks in the 40-50 MHz. range; so it could be converted for use as a 6 meter repeater or base station. I imagine some of the tubes are weak and should be replaced. $65 plus s & h from Schenectady, NY

Joe: In 1956 we used brand new H.P. audio oscillators and if you had asked me I would have said ours were "200CD" type. I think I'm correct in recalling that. They were more compact than the one shown on ebay. About half the width; vented case with rounded corners and a carrying handle on top; I recall that the oscillator tube or tubes were 6SN7s? And I seem to recall ours had a metal rectifier tube, possibly a 5Z3 and an output tube, but not sure. I believe there was a also rack mounted version. Somewhere in my junk I have a spare three (or is it four?) section tuning capacitor and spare audio feedback transformer. Memory doesn't serve me well regarding frquency range (maybe up to 100 000 cycles?), because I recall measuring at carrier frequencies well above 10 000.
I think our companion AC VTVM was a 400D? Also portable.
Having said all this I get the impression the unit on ebay is of mid late 1940s vintage.It's style of construction is reminiscent of the equipment we used but is, (for want of a better word), 'cruder'.
The manual appears to be of identical appearance to the ones we used.
My best guess. Any help?
Terry S. Newfoundland, Canada.
PS. I just acquired a HP 606B. Seems to work well but no manual!

Subject: Flux Shunts

I removed mine, they look like a stack of "I" cores used as fillers between the "stacks" of coil windings. I am winding the transformer the old way with the windings layered on top of each other instead of each winding seperately sliped over the core. I will also be reversing the direction of each set of lams instead of placing them all in the same direction.

Having rebuilt an SX-28 including the RF section, I can appreciate the difficulty, but it's really not that hard if you are methodical. The audio quality in the 28 and the S-37 was remarkable. Few others could compete with that. I'm somewhat prejudiced, having about five Hallicrafters radios, but I think at the time they were great radios for the money. Some hold up still today as solid performers, and the SX-28 is still the most "fun" radio around.

Aren't microwave oven transformer a pain! They weld these together now. I originally remember this would have been a no-no since these were suppose to be insulated from each other.

Date: Wed, 09 Aug 2000 23:48:58 GMT
From: Charles Days
Subject: Help winding a transformer

That weld is the flux shunt. Look for single turn copper bands or wire, usually 180 deg. apart surrounding the core. If you can break these off, your O.K. Also a hidden shunt is through bolts in the laminations that do NOT have insulating washers, these bolts will also shunt current and increase primary current and add heat. The micro tranny may be stacked as separate "I" "E", interleave them for your project. They have flux shunts to keep the external magnetic field low, else transduce into the metal cabinet! Heat the cabinet and hum like hell.

Charlie
WA1JFD

P.S. Just what are you looking for output from your home made transformer? A Ham Fleamarket is coming up in my area and may yield some good junque?

Evan:

What do you really want here? If you are looking to get rid of it, put
it on Ebay and take what you get. The market will dictate price. If you
really want to know what it's worth, go to Ebay. You'll find 2 of them
currently for auction with 4 days to go. One is $280 and looks like a
collector item. The other is $46 and looks like a user. Searching for a
completed auction produces a listing of one that sold for $70 something.
It was a little more cobbled up than yours sounds like. You could have
done this same research, so I ask again what do you really want from the
group?

A transformer out of an old AC tube type TV would probably be suitable? Most
likely be 300-0-300 or something close and have 5 volt and 6.3 volt
windings. Have to check physical size/space.

Suggestion.

Harold W4PQW

Dang, I didn't know the 815 was two 2E26s! (Open large book of things I didn't know and make another entry...) Makes perfect sense, though.

Speaking of 10 meters, does anybody know how 807s behave up there? How about 5933s (shorty 807s). I've never built a 10 m rig, but I've been feeling a bit of an itch lately.

73,
Mike, KK6GM

Nah. Jeff you are really a 'Boat Anchorer' at heart I suspect.

Drop the tough/practiacl exterior and get nostalgic like the rest of us!
.
I recently dragged a 90 pound, 60 year old monster back from the UK, getting it under the 70 pound limit for check in baggage by partiallly dismantling it on somebody's dining room table, carrying the power supply portion in my hand luggage, the tubes in my briefcase and secreting various bits in other luggage. Why? Cos I had one of those when I was a late teenager some 50 years ago! Call me sentimental, OK? Works too!

You may have a point; but in 30 years time someone will be saying I wonder why grandad .....looks like it's been "Jeffed up"!

All the best. Terry S.

As with so many things, that depends largely on what you are using it for, and what you value in terms of functionality and performance. For CW and AM SWL, even DX, the SX-100 (and other high-end Hallies) is still a mighty fine working radio. No one likes seperate receivers and transmitters anymore (does anyone make such beasts?!), but if you are like me and don't contest, don't do mobile HF, have fun DXing but don't take it too seriously (16 countries and 31 states in 3 years of hamming, woohoo!), and don't have skatey-eight "favorite" frequencies that you have to have entered into memories, then an SX-100 or a Drake B-line is more than enough radio. And on one score, especially near a solar maximum, boatanchors exceed their modern SS rivals: audio. On both TX and RX, code and phone, I can listen longer with less fatigue to a tube rig than a solid-state. Hour long QSOs and BBC dramas are plain tiring on the new stuff. Even with the best outboard speakers or headphones, I can listen that long, but sure don't want to.

Not that KenYaeCom *couldn't design comparable solid-state audio stages (though thermionic audio has a sound, actually a form of mild distortion, that I love and crave), they can. It is just that somehow audio has been de-valued in the radio design engineering world, expecially HF, in the last 20 years. I don't know why this is, but on all scores, all makes, all models, with a few exceptions like Drake, Grundig, and possibly Ten-Tec, just sound yukky. Small speakers, low output, crappy stock electret condensor microphones, and little attention to AF circuit design all around.

Again, this mystifies me, insofar as there have been absolutely tremendous advances in performance in almost all other regards, and inasmuch as good audio circuits are easy and cheap to design and build compared to RF and IF and DSP circuits. Somehow, the idea has gotten around that you don't *need* good audio in a communications receiver or HF transceiver, at either end. The first thing any good ricebox needs out of the package is an outboard speaker and a replacement for that microphone that has the same element as a $30 handheld cassette tape recorder. Why don't they get it?

TS-660 has NO CW filter, posting updated

WB3KUM/9 wrote:
I am selling off several pieces of my station so I may upgrade to some newer equipment.

Ten Tec Paragon, model 585. Equipped with FM board, RS-232 interface, and voice board. Includes hand microphone and Astron RS-20 power supply. Functionally 100%, cosmetically 8 out of 10. Some minor cracking around screws on front panel, the lettering is rubbing off the LCK (lock) and TUNE buttons. Recently replaced several of the buttons on the control panel so it is working 100%. 6, 2.4, 1.8, 500, 250 filters included.
$800.00 firm plus shipping.

Kenwood TS-700A all mode 2 meter transceiver and out board linear amp. TS-700A equipped with sub repeater options. Functionally 9 out of 10, two of the grain of wheat bulbs are burned out. Internal 28V power supply recently rebuilt by AES Milwaukee so it is 100%. Cosmetically an 8 out of 10, normal minor scratches and dusty. Amplifier is a VJ-90, 1970ï¿½s company now out of business. Functional 6 out of 10. Transmit amp and auto T/R switch are fine, preamp dead. Never needed, TS-700A receiver is very good. Have original hand mic but element is dead. Includes manuals for TS-700A, no manual available for amp.
$275.00 firm plus shipping.

Kenwood TS-660 15, 12, 10, 6 meter transceiver. USB, CW, AM, and FM, 8-10W in, 4-5W out. Cosmetically an 8 out of 10, normal minor scratches and dusty. Includes MC-85 microphone, missing foam mic cover, MC-43S mobile microphone with up/down VFO buttons, Astron RS-12 power supply, memory backup "wall wart", and manuals. Has SSB filter but no CW or AM filter.
$325.00 firm plus shipping.

Heathkit SB-401 transmitter. Includes transmit crystal pack. Cosmetically an 6-7 out of 10. Normal chipping and some scratches on paint. Very little rust. Old masking tape residue on front panel. Missing top cover on RF cage. Unit is complete but I bought it and never tested it. I will include a Heathkit SB-400 replacement manual and a used mic connector for your mic.
$150.00 firm plus shipping.

All items I try to represent honestly as to true condition. Except for the Heathkit SB-401 which is sold As Is, all equipment is functional as described but no warranty is offered. If it arrives DOA, I will consider returns at 100% refund of all monies.

Shipping is real cost, no extra for packing but will be shipped insured. I use USPS but will ship Fedex at buyerï¿½s request plus the real cost for Fedex shipping. Check or money order, I will accept COD, but I will add COD charge to the shipping cost. US buyers only, no international or US territories.

If you have any additional questions, please contact me by e-mail or evenings at home. My call is good in current call books within the last 4 years.

Dennis WB3KUM/9

Actually, I have only made measurements with a simple DVM with
digital frequency meter built-in.

There are three terminals. Using one pair I got what appears to be
approximately 20 Hz and on the other pair I got a reading of 60 Hz.

Maybe it is a false reading. I do not have access to a scope here at
present. The voltage is fairly constant while turning at different
speeds.

Greetings ALL:

This is the final notice with only eight hours remaining.

19" Desktop equipment rack/cabinet

The outside dimensions are 24" (W) x 13" (H) ax 16" (D)
The inside (opening) dimensions are 19" (W) x 8.75" (H) x 15.5" (D)* This measurement is from mounting rib to mounting rib (front to back). It also has two rails on the inside bottom that are adjustable, width wise.
Top and Bottom panels are screens.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=405416380

Good luck and thank you.

Subject: BADASS!

I just found the coolest site on the web that I want you to check out. It's called
Soundom.net and it's a company that pays us do what we are already doing: listening to
music! Thats right, Soundom PAYS US for listening to our MP3s, CDs or Internet Radio. All
we have to do is download the Soundom Application or the Plugin to Winamp, Windows Media,
or Sonique (others are on the way). And they pay in US DOLLARS that we can spend anywhere,
not vouchers or some other internet currency. Best of all, you can ear
n additional money by referring people to sign up for Soundom!

Just when you think it could not get better, it does. Soundom also pays the artists every
time we play them, just like a radio station would. So we're supporting our favorite
artists just by playing their music.

Soundom is launching the program later this summer, and is going to be rolling out on a
first come, first served basis. So check it out at http://www.Soundom.net

Subject: Decade counting tubes / Dekatrons

While this is only tangentially related to Radio's, I suspect there will never be a Dekatron newsgroup!

For some strange reason I've become fascinated with Dekatrons and other counting tubes - I'm looking for some more to play with, and would like to purchase or swap for any of them, including:

7 pin miniature: 7155, 6879
Octal: GC10B, 6802, 6909, Z303C
12/13 pin: GS10C, 6476/A, 6910, Z502S, 7978

Also spec sheets/literature would be very welcome.

I wouldn't mind a few inexpensive nixie tubes as well.

I have a good assortment of more "conventional" tubes to swap etc.

My first Decatron construction is below:

http://www.the-planet.org/dekatrn.jpg

Many thanks,

- Gary

Relax, Mac! Insults are no remedy for the thing that offends you. While I can't fathom anyone, especially someone who listens to the HF bands, being so deeply offended by an off-the-cuff, absent-minded, and decidedly mild "expletive", you have that right, but not to the extent that you violate two *more* Commandments in the process. . .

> Even AA5s have better audio.

Amazing isn't it? This is one thing that Hallicrafters did well most of
the time. A nice pair of 6V6's or 6F6's in push-pull for the audio!
Volume (today manufacturers brag about anything more than about a watt.
One watt!) and rich, warm, clear, tone. I think it had a lot to do with
the marketing philosophies of the two companies. Collins was a military
contractor, and good audio just doesn't seem to be much of a concern for
battlefield comms, though I don't know why, since good audio means
intelligibility, plus it helps the poor soldier that has to sit by the
rig 14 hours a day do his job better. Hallicrafters on the other hand
sold to civilians mainly, and far more SWL radios than Ham. Hams can
tolerate all sorts of noise. We have to. Such are the perils of HF at
the power levels we may use. SWL's are pickier, even the real DXers.
When the signal you are tuning beams at you from antenna arrays that
cover acres, and which radiate RF in the 100's of kilowatts in many
cases, you get used to signal quality that would seem overkill to a ham.
Ham HF is to SWL HF what AM is to FM where the music lover is concerned.

> ...and the SP-600 also takes the cake for "most impossible to repair" radio.

Harder than an R-390?

From: Will
Subject: Hallicrafters Haters Association (more on audio old and new)

As with so many things, that depends largely on what you are using it for, and what you value in terms of functionality and performance. For CW and AM SWL, even DX, the SX-100 (and other high-end Hallies) is still a mighty fine working radio. No one likes seperate receivers and transmitters anymore (does anyone make such beasts?!), but if you are like me and don't contest, don't do mobile HF, have fun DXing but don't take it too seriously (16 countries and 31 states in 3 years of hamming, woohoo!), and don't have skatey-eight "favorite" frequencies that you have to have entered into memories, then an SX-100 or a Drake B-line is more than enough radio. And on one score, especially near a solar maximum, boatanchors exceed their modern SS rivals: audio. On both TX and RX, code and phone, I can listen longer with less fatigue to a tube rig than a solid-state. Hour long QSOs and BBC dramas are plain tiring on the new stuff. Even with the best outboard speakers or headphones, I can listen that long, but sure don't want to.

Not that KenYaeCom *couldn't design comparable solid-state audio stages (though thermionic audio has a sound, actually a form of mild distortion, that I love and crave), they can. It is just that somehow audio has been de-valued in the radio design engineering world, expecially HF, in the last 20 years. I don't know why this is, but on all scores, all makes, all models, with a few exceptions like Drake, Grundig, and possibly Ten-Tec, just sound yukky. Small speakers, low output, crappy stock electret condensor microphones, and little attention to AF circuit design all around.

Again, this mystifies me, insofar as there have been absolutely tremendous advances in performance in almost all other regards, and inasmuch as good audio circuits are easy and cheap to design and build compared to RF and IF and DSP circuits. Somehow, the idea has gotten around that you don't *need* good audio in a communications receiver or HF transceiver, at either end. The first thing any good ricebox needs out of the package is an outboard speaker and a replacement for that microphone that has the same element as a $30 handheld cassette tape recorder. Why don't they get it?

From: "Mark Bell"
Subject: HT-32 Help Needed

Folks --

I'm in the process of restoring my HT-32 Mk 1 transmitter, and need some
technical assistance.

My problem is low power on 80, 40, 15, and 10 meters. 20 Meters is fine
with output around 80W or so. The other bands are around 35 to 40 W.

While trouble shooting this problem, I ran across something interesting that
may or may not be contributing to this problem. It's the level of the 9 Mhz
carrier oscillator signal. (If I'm getting 80W out on 20, but only 35 to 40
on the other bands, I tend to think the carrier osc isn't the problem as
it's band independent....but.....).

The following measurements were made with my homebrew RF probe (from the
ARRL handbook) and a Heathkit IM-11 VTVM.

On the HT-32, I removed tubes V6 (Het Osc) and V7 (2nd Mixer). I then
measured the carrier osc signal on pin 1 of V7. The reading was between 0
and 0.08 volts as the RF Level control was turned. This voltage variation
occurred with the RF Level set between 6.5 and 10 (which itself seems
strange -- I expected full control range).

As a sanity check, I did the same test on my HT-37, which works fine. The
reading on pin 1 of V7 (1st mixer) was between 0 and 0.35 volts, pretty much
across the full range of the RF Level control. This is in the ballpark of
what I expected on the HT-32.

Are my readings for the HT-32 correct? Any comments on the RF Level control
being only effective between settings 6.5 and 10?

Thanks

A single 807 gives me 25-30watts out in my old Knight-kit T-50. That is class C. According to the 1968 handbook, with a pair of 807s in AB2, 750v on the plate and 300 on the screen you would get about 120 output. I don't have a schematic. Pick up a old handbook. I'm sure youcan find something there. Also be aware that a 1625 is the same tube except for the filament.

Subject: Speed-x bug value?

I just acquired a Speed-X bug model 515. The box and the key say Les Logan, Co, San Francisco, so I assume this is before EF Johnson bought out Speed-X. The bug is virtually unused, in the original box with the original instruction sheet dated September 15, 1941.

I would like to sell it, but before I do so blindly, I wonder if someone might help me ascertain its value. Any help or leads would be appreciated.

tnx

From: "Lamb"
Subject: Speed-x bug value?

Hi Mike:

I am not an expert, but I do have about 10 bugs. The bug you have is not real common, although not uncommon. Because it is virtually new, it probably will bring a premium.

I would guess one in good condition would bring $100. However, because they do not make them anymore, and because all you need is one collector who is willing to pay extra for one in that condition, it may be worth at least a few hundred dollars. So, expect $100 and be pleased if you get $200. It should bring joy to someone.

good luck, Colin K7FM

Perhaps not 'ringing generators'?

Maybe these were the generators designed to provide power for emergency life raft equipment. Anybody remember the 'Gibson Girl' hand cranked emergency transmitters for use by downed WWII aircraft crews?

They incorporated a hand crank generator, had a unique shape (hence the name!) {Was it Dorothy Gibson btw? The memory and testosterone ain't what it used to be! But maybe an old film star aficionado can advise?}. They were painted bright yellow. They appeared on the 'surplus' market after the war when I was a teenager. Also one was advertised for sale on the internet within last two years.

I recall they used one 12A6 tube? Radiated on 500 kilocycles (the international CW distress frequency) and had a continuous mode and a rubber covered button to be used as a morse key? I also remember a kite antenna and long wire.

I never studied them; but perhaps the two outputs of the generator were a) 12 volts for the 12A6 heater and b) 120 volts for B+ for the emergency transmitter? I don't think there was a rectifier tube? Maybe the transmitter was supplied with AC B+ or rough DC B+ through contacts on the hand generator?

Does any of this make any sense or can someone more knowledgeable (and maybe a little older!) deny or confirm.

PS. I even had trouble 'spelling' testosterone! Now where's that "Spell check".

Mark, it may not be relevant, but one of the limitations of the HT32 line is that they do not have loading controls. So, one may obtain different output powers with different antennas and/or loads. You might want to check some of this (I'm assuming you've already checked the internal alignment).

Absolutely. At least the R-390 has removable modules and is pretty reliable
to begin with.

FOR SALE : MN-4 Tuner
I purchased this tuner to use with a B line, but found I really don't have
the room (or need) for it with my other tuners. It is in nice condition,
the front panel and meter is a 9, the case has some light scratches, not bad
at all it is a 7 or 8. It works well, hasn't been arc'd or overheated. I
will sell for $100 plus shipping. Please email for more info if interested
Thanks
Tim

Amazing isn't it? This is one thing that Hallicrafters did well most of
the time. A nice pair of 6V6's or 6F6's in push-pull for the audio!
Volume (today manufacturers brag about anything more than about a watt.
One watt!) and rich, warm, clear, tone. I think it had a lot to do with
the marketing philosophies of the two companies. Collins was a military
contractor, and good audio just doesn't seem to be much of a concern for
battlefield comms, though I don't know why, since good audio means
intelligibility, plus it helps the poor soldier that has to sit by the
rig 14 hours a day do his job better. Hallicrafters on the other hand
sold to civilians mainly, and far more SWL radios than Ham. Hams can
tolerate all sorts of noise. We have to. Such are the perils of HF at
the power levels we may use. SWL's are pickier, even the real DXers.
When the signal you are tuning beams at you from antenna arrays that
cover acres, and which radiate RF in the 100's of kilowatts in many
cases, you get used to signal quality that would seem overkill to a ham.
Ham HF is to SWL HF what AM is to FM where the music lover is concerned.

Relax, Mac! Insults are no remedy for the thing that offends you. While I can't fathom anyone, especially someone who listens to the HF bands, being so deeply offended by an off-the-cuff, absent-minded, and decidedly mild "expletive", you have that right, but not to the extent that you violate two *more* Commandments in the process. . .

Perhaps I'm paranoid, but does the fact that the face has RADIUM on it bother anyone else? From the description, it sounded like it is the kind where you open the face to wind it, thus exposing the radium (or what's left of it) to the environment. The meters on the R390As were removed by the government for just that reason - and they were in sealed housings.

715. HT-32 Help Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-16 04:15:11 UTC
From: Mark Bell <bellfamily@supernet.com>
Message-ID: <gwom5.24523$YI1.760095@nntp3.onemain.com>
Source record: 62737

Folks --

I'm in the process of restoring my HT-32 Mk 1 transmitter, and need some technical assistance.

My problem is low power on 80, 40, 15, and 10 meters. 20 Meters is fine with output around 80W or so. The other bands are around 35 to 40 W.

While trouble shooting this problem, I ran across something interesting that may or may not be contributing to this problem. It's the level of the 9 Mhz carrier oscillator signal. (If I'm getting 80W out on 20, but only 35 to 40 on the other bands, I tend to think the carrier osc isn't the problem as it's band independent....but.....).

The following measurements were made with my homebrew RF probe (from the ARRL handbook) and a Heathkit IM-11 VTVM.

On the HT-32, I removed tubes V6 (Het Osc) and V7 (2nd Mixer). I then measured the carrier osc signal on pin 1 of V7. The reading was between 0 and 0.08 volts as the RF Level control was turned. This voltage variation occurred with the RF Level set between 6.5 and 10 (which itself seems strange -- I expected full control range).

As a sanity check, I did the same test on my HT-37, which works fine. The reading on pin 1 of V7 (1st mixer) was between 0 and 0.35 volts, pretty much across the full range of the RF Level control. This is in the ballpark of what I expected on the HT-32.

Are my readings for the HT-32 correct? Any comments on the RF Level control being only effective between settings 6.5 and 10?

Thanks

Mark K3ZX
Airville PA.

Buck:

Ever see or use one of those 'magneto' hand cranked phones? (I've got two of the big old wooden ones.)

When you turn the handle coils are rotated within the field of a permanent magnet. The faster the handle is turned the higher the frequency of the AC generated. The alternating voltage generated could be up to 120 volts open circuit, frequency dependent on the rate of rotation..

If there was a short on the telephone line you sometimes could hardly turn the handle at all!

Many military 'field' telephones (all nationalities) use/used the same ringing system.

As a previous poster mentioned ringing voltage in many/most North American telephone systems; i.e. the alternating voltage coming from the central telephone exchange to ring your telephone when somebody is calling you, is usually 20 hertz (cycles).
Most telephone sets were/are not too sensitive to the ringing voltage frequency; for example I am familiar with one system that used telephones nominally designed for 20 hertz for many years with a ringing frequency of 33.3! Most phones don't like 60 hertz however but will often vibrate and/or tinkle, or even ring continuously, if your telephone line happens to get crossed up with 60 hertz power!

However there were and possibly still are some telephone systems that use different frequencies.
A system developed, I believe by Automatic Electric in Chicago, for example, provided up to five different frequencies, for party lines. The telephone sets were 'tuned' electrically and mechanically to vibrate and ring only when the appropriate frequency for that party was sent out by the telephone exchange. The advantage was 'secrecy of ringing' other

parties on the line wouldn't know someone else was receiving a call unless they happened to pick up the phone while ringing or conversation was in progress.

With five frequencies up to 10 parties could be served from one line, all with secrecy of ringing, by connecting five ringers from one side of the line to ground and five from other side of line to ground. This ten party system was not used in many areas because high soil resistivity made it extremely difficult to get a good ground connection. One system I am familiar with used only four frequencies; with the ringers connected across the telephone line pair to provide up to four parties on one line.

The expression "Share the time on your party line was commonly advertised". A disadvantage of what was sometimes (incorrectly) called "harmonic ringing system" was that the telephone companies had to stock and maintain phones and ringers for five different frequencies. I seem to recall that typical ringing frequencies were. 16.6, 25.0, 33.0, 50.0, 66.6, hertz? In some cases motor driven AC generators produced the four or five ringing voltages. With input voltage variation to the motors, especially if the motors were DC and supplied from the nominally 48 volt central office exchange batteries, it was sometimes a devil of a job to keep them on frequency!

In many rural areas of North America, magneto phone systems were used beyond the 1960s (maybe even today?) and as mentioned the ringing frequency would be dependent on however fast you turned that handle.

One advantage of the magneto system was that it did not require AC electricity. All talking voltages came from 'S' type 3 volt dry cell batteries which lasted for months/years. Ringing voltage came from cranking that handle. Thus even the small manual switchboard that served as the telephone exchange (Central) in many small North American communities could continue operating for days without AC power. With a kerosene lamp on top of the switchboard; hard on the operators wrist though, ringing all those calls through by hand sometimes on lines that sometimes ran for miles through damp trees etc. During the cold war it was rumoured that magneto telephone systems with their simplicity and rugged construction would be the most likely to survive the magnetic pulse destruction of thermo nuclear weapons. Not that it would matter much!

Just thought I'd comment!

Subject: =AD: www.hamexam.com

I'll chime in on this one and say that I thought the software was very good. I had used some of the online tests, but I found that they were not a time efficient. I also found the software to be very versatile so that I could do a lot more custom things with it which I think helped me a great deal.

And no I don't work for them, and no they did not ask me to post this. I just thought I would toss in my 2 cents worth because I was pleased with the software.

Subject: Decade counting tubes / Dekatrons

While this is only tangentially related to Radio's, I suspect there will
never be a Dekatron newsgroup!

For some strange reason I've become fascinated with Dekatrons and other
counting tubes - I'm looking for some more to play with, and would like to
purchase or swap for any of them, including:

7 pin miniature: 7155, 6879
Octal: GC10B, 6802, 6909, Z303C
12/13 pin: GS10C, 6476/A, 6910, Z502S, 7978

Also spec sheets/literature would be very welcome.

I wouldn't mind a few inexpensive nixie tubes as well.

I have a good assortment of more "conventional" tubes to swap etc.

My first Decatron construction is below:

http://www.the-planet.org/dekatrn.jpg

Many thanks,

- Gary

Subject: FS: COLLINS 75A-2

This receiver is in excellent shape. It has been thoroughly cleaned and lubricated. All new electrolytic capacitors have been installed. A new drum dial was installed. Receives broadcast and AM shortwave fine. Sensitivity is low on some bands. This is a late model set, uses 6BA7 mixers and 6CB6 RF amp. Front panel is excellent, no broken or chipped knobs. The cabinet has been touched up with St. James Gray paint. A previous owner has added three RCA type jacks on the rear panel. These can be removed and holes plugged if desired. This is the only modification I can find. This set has a crystal calibrator installed. All internal shields are intact. Included with the set is a Collins color manual and a Sam's photofact folder. Also included are two plug in adaptors on which I have no documentation. I believe them to be product detector adaptors which plug into the internal accessory socket in the receiver. This set is exceptionally clean, guaranteed no dust or crud inside or out. I have .jpeg files available if you would like to see them, just email me. $650. Shipping will be extra and I will insist on double boxing with lots of packing material. I live in the Houston TX area if you

want to pickup or see this receiver.

Thanks,

Ron, AB5WG

Yes, you are paranoid. By the same token, almost *everyone* who was exposed
to Radium before 1897 is now dead.

As for submarine uses, they would be an ideal survivial vehicle when the
oceans cover the earth or, a rather unique military vehicle collectors item.

From: "Jack"
Subject: FS Hammarlund HX-50A Transmitter

After much thought I have decided to part with my HX-50A transmitter. The price is high, however this is truly a collector quality rig. It even smells new. Come complete with original carton and manual. Does not have the 160 meter add on. The rig is in excellent condition. The only band I used with it was 20 meters and it operated well on all modes (CW, AM and SSB). There is not a scratch, rub, dent or mark of any kind on this radio. The chassis is equally clean. I am selling because I am not going to set up a Hammarlund station right now and know I will be sorry I let this beauty go.
Photo at: http://home.pacbell.net/friday2k/HX50A.jpg
Price: $600 plus split shipping cost.

Yep. In fact, I think a third disqualifying question (in addition to the
two about felony convictions and being hospitalized for mental illness)
ought to be whether you post more than 50 messages per day to USENET. . .;)

Amazing isn't it? This is one thing that Hallicrafters did well most of
the time. A nice pair of 6V6's or 6F6's in push-pull for the audio!
Volume (today manufacturers brag about anything more than about a watt.
One watt!) and rich, warm, clear, tone. I think it had a lot to do with

the marketing philosophies of the two companies. Collins was a military contractor, and good audio just doesn't seem to be much of a concern for battlefield comms, though I don't know why, since good audio means intelligibility, plus it helps the poor soldier that has to sit by the rig 14 hours a day do his job better. Hallicrafters on the other hand sold to civilians mainly, and far more SWL radios than Ham. Hams can tolerate all sorts of noise. We have to. Such are the perils of HF at the power levels we may use. SWL's are pickier, even the real DXers. When the signal you are tuning beams at you from antenna arrays that cover acres, and which radiate RF in the 100's of kilowatts in many cases, you get used to signal quality that would seem overkill to a ham. Ham HF is to SWL HF what AM is to FM where the music lover is concerned.

John:

You can get "Dri-Transfer" labels from Antique Electronics Supply at
. Get the set for Amateur Radio and CB.
You will find words like TUNING, BANDSPREAD, BFO, VOLUME, STANDBY, etc.
They work very well.

From: "Mark Bell"
Subject: HT-32 Help Needed

Folks --

I'm in the process of restoring my HT-32 Mk 1 transmitter, and need some technical assistance.

My problem is low power on 80, 40, 15, and 10 meters. 20 Meters is fine with output around 80W or so. The other bands are around 35 to 40 W.

While trouble shooting this problem, I ran across something interesting that may or may not be contributing to this problem. It's the level of the 9 Mhz carrier oscillator signal. (If I'm getting 80W out on 20, but only 35 to 40 on the other bands, I tend to think the carrier osc isn't the problem as it's band independent....but.....).

The following measurements were made with my homebrew RF probe (from the ARRL handbook) and a Heathkit IM-11 VTVM.

On the HT-32, I removed tubes V6 (Het Osc) and V7 (2nd Mixer). I then measured the carrier osc signal on pin 1 of V7. The reading was between 0 and 0.08 volts as the RF Level control was turned. This voltage variation occurred with the RF Level set between 6.5 and 10 (which itself seems strange -- I expected full control range).

As a sanity check, I did the same test on my HT-37, which works fine. The reading on pin 1 of V7 (1st mixer) was between 0 and 0.35 volts, pretty much across the full range of the RF Level control. This is in the ballpark of what I expected on the HT-32.

Are my readings for the HT-32 correct? Any comments on the RF Level control being only effective between settings 6.5 and 10?

Thanks

Mark K3ZX

From: aa5qt@aol.com (AA5QT)
Subject: HT-32 Help Needed

Mark, it may not be relevant, but one of the limitations of the HT32 line is that they do not have loading controls. So, one may obtain different output powers with different antennas and/or loads. You might want to check some of this (I'm assuming you've already checked the internal alignment).

Dean,

There is a ham out there who does conversions of SB0-220s and SB-200s to 6
meters, and as a result he has coils and bandswitches as left-over
parts that he sells separately.

You might want to talk to him about a replacement bandswitch.

His e-mail address is: Carl KM1H@JUNO.COM

Subject: Paper capacitor question

I just got finished re-capping (100%) a DOA Hammarlund HQ-120.
Virtually all the caps (Corny-Dub. "Tiger" brand) were leaking and most
were unmeasurable, capacitance-wise. Its working just fine now.
Question is, I also have an SX-28 ('42) that still has all the original
Sprague caps in it and it works perfectly (not that some of the caps
aren't a bit long of tooth). Are these "tigers" akin to the
black-beauties in the reliability arena? Thanks for any insight.

Subject: Speed-x bug value?

Hi Mike:

I am not an expert, but I do have about 10 bugs. The bug you have is not real common, although not uncommon. Because it is virtually new, it probably will bring a premium.

I would guess one in good condition would bring $100. However, because they do not make them anymore, and because all you need is one collector who is willing to pay extra for one in that condition, it may be worth at least a few hundred dollars. So, expect $100 and be pleased if you get $200. It should bring joy to someone.

good luck, Colin K7FM

From: jwodell@ameritech.net (Jerry W. O'Dell)
Subject: What to do with old stuff

Over the years I have collected a whole bunch of old,
real boatanchors. Things like a DX-40, Drake 2B,
many old transceivers, HQ170, and so on.

Quite frankly, I don't see how I can sell those things,
honestly, for more than $100. Most have minor
eccentricities.

But for $100, it simply isn't worth packing them up
and shipping them. So they sit there. Same problem
with giving them away. I'd still have to ship them.

I ask on the local nets for people who would like them
really cheaply, and nuttin. The new hams, of course,
have never heard of tubes, and would kill themselves
on the HV.

I suspect I'm going to through them out! Seems a pity.

Seems to me a friend of mine acquired the contents of an overwater emergency kit from a Martin 404 when the entertainer who owned it upgraded to a De Havilland something or other. Well, after cranking the transmitter we decided to see what would happen with the balloon thingy and placed it in sufficient water. It promptly inflated itself and took off trailing the antenna wire, which dragged across a nearby set of utility lines and killed the power for the block.

Subject: Comparing Receivers

It is not too difficult to design a receiver with a noise floor that is well below man-made and atmospheric noise. Therefore, you may wish to consider selectivity to determine your choice.

From: "Ron Eisenbrey" <ab5wg@alltel.net>
Subject: FS: COLLINS 75A-2

This receiver is in excellent shape. It has been thoroughly cleaned and lubricated. All new electrolytic capacitors have been installed. A new drum dial was installed. Receives broadcast and AM shortwave fine. Sensitivity is low on some bands. This is a late model set, uses 6BA7 mixers and 6CB6 RF amp. Front panel is excellent, no broken or chipped knobs. The cabinet has been touched up with St. James Gray paint. A previous owner has added three RCA type jacks on the rear panel. These can be removed and holes plugged if desired. This is the only modification I can find. This set has a crystal calibrator installed. All internal shields are intact. Included with the set is a Collins color manual and a Sam's photofact folder. Also included are two plug in adaptors on which I have no documentation. I believe them to be product detector adaptors which plug into the internal accessory socket in the receiver. This set is exceptionally clean, guaranteed no dust or crud inside or out. I have .jpeg files available if you would like to see them, just email me. $650. Shipping will be extra and I will insist on double boxing with lots of packing material. I live in the Houston TX area if you want to pickup or see this receiver.

Thanks,

Ron, AB5WG

From: "Jack" <friday2k@pacbell.net>
Subject: FS Hammarlund HX-50A Transmitter

After much thought I have decided to part with my HX-50A transmitter. The
price is high, however this is truly a collector quality rig. It even
smells new. Come complete with original carton and manual. Does not have
the 160 meter add on. The rig is in excellent condition. The only band I
used with it was 20 meters and it operated well on all modes (CW, AM and
SSB). There is not a scratch, rub, dent or mark of any kind on this radio.
The chassis is equally clean. I am selling because I am not going to set up
a Hammarlund station right now and know I will be sorry I let this beauty
go.
Photo at: http://home.pacbell.net/friday2k/HX50A.jpg
Price: $600 plus split shipping cost.

Subject: HRO 5 and misc

Hi Lew:

I am interested in the HRO without the meter. I believe that would be the HRO Jr. I do not know what the prices will be, and it may be out of my league. I have been asked to assist in making a old radio station for the museum that houses the Hughes Spruce Goose. Since Hughes was an amateur in his early years, he appreciated the ability to communicate that hams had, and when he set up his round the world flight, he used hams exclusively. Although we are still negotiating, the HRO would be perfect for a period ham station. The museum may still decide to use a ham station from the Viet Nam era, since it is a memorial to a son who fought there (but died in a car wreck years later). If they are ready to commit now, it could be donated to a charitable organization. Or, I could buy it now and either loan it or keep it if they decide not to use that era. Have always wanted one anyway. However, the market price may be more than I want to pay.

If the transmitter is reasonably compact and has a clean, amateur look to it, that would also be interesting for a period station. Would like to get photos of that and how much you are expecting for it.

Thank you for your assistance. 73, Colin Lamb, K7FM

From: jwodell@ameritech.net (Jerry W. O'Dell)
Subject: What to do with old stuff

Over the years I have collected a whole bunch of old,
real boatanchors. Things like a DX-40, Drake 2B,
many old transceivers, HQ170, and so on.

Quite frankly, I don't see how I can sell those things,
honestly, for more than $100. Most have minor
eccentricities.

But for $100, it simply isn't worth packing them up
and shipping them. So they sit there. Same problem
with giving them away. I'd still have to ship them.

I ask on the local nets for people who would like them
really cheaply, and nuttin. The new hams, of course,
have never heard of tubes, and would kill themselves
on the HV.

I suspect I'm going to through them out! Seems a pity.

I feel your pain. Where are you located Jerry? Maybe I can send someone over to
take 'em off your hands.

I run an all vacuum-tube station on HF, and have a small collection of restored
Hallicrafters receivers. I wanted to be sure these wouldn't end up in the
dumpster or on E-bay when I passed away, so I searched for some younger person
who would have an interest in such things, so that I could specify them in my
will. I had a really hard time finding anyone. It's become a "plug and play"
world, but there are still a few curious souls about, who respect what has gone
before.

I first got interested in radio when things glowed. My first non breadboard radio was a Knight Space Spanner (if you happen to have one of those, I'll buy it from you) hooked up to a 40m folded dipole on the roof. I used to ride my bicycle to Henry Radio when they were on Olympic Blvd in West LA. I would lust after the stuff in the piles of used equipment then spend a buck for a CK-722 or other part and ride home. I happened to be in LA on business a few years ago and dropped by the Henry Radio store on Bundy. With all respect to the Henry brothers, it just aint the same!

25 years later I finally got my ticket and like most, bought the state of the art solid state stuff. Now after having been a ham for over 15 years I got the bug for a piece of history. I bought a pair of Drake Twins. Haven't tried the xmtr yet, but the rcvr needs work. Unlike my solid state stuff, when I pulled the cover and saw all those discrete parts with leads and lots of room for my stubby fingers, I said to myself: "I can do this!"

Don't dump those pieces of history. Take one of the rigs to a place like Mail Box's Etc. and find out what they will charge you to package and ship it to CA or FL. Establish this as a standard packaging fee and offer your stuff on the web. Big, heavy items would have to be handled differently, but if somebody is interested, they'll pay. I'd like to see the list.

Good luck

Gene,
N4JEE

Hello Jerry, love your call.

I am surprised that there are no takers for you equipment. If you are going to give them away I would even consider driving all the way from the far side of Chicago, there has to be others. I sure there has to be some interested people in the Detroit area that would be willing to buy them on a pick-up only basis. Have you tried some of the collector or other non-ham radio groups, a local news paper or local AM radio swap shop. Also, see if there is a local museum that would be willing to

take them. When I went through the Ford Museum last year they had a nice display of "homes" of the period with period items.

Please, before you throw them out, let me or post it up on the internet. I may not keep everything, but I am sure I will at least some. But I am NOT interested in making money on this, just ask my wife. If you want to place a limitation of no E-Bay sales, this would be fine. I enjoy fixing older radios and I would also like to see them find a good home. My father-in-law, WA3WZX, I just clued him in someone who was looking for some old earily 1950's Link VHF equipment. His base 6 meter FM tranciever is now sitting in a race car museum in Fl. I am sure just with this posting you will get a bunch of responces.

Gee, I wish I could find someone like you in my area. I have always said
that building "stuff" was one of the main reasons I got into ham radio to
begin with. It's really hard to find anyone in my area who will help with
more than just piecing together an antenna system.

By ALL means go to the Techniska Museet, there is a communications museum there that is totally DYNOMITE!!! It is wonderful. Four sections, one each for telephone, telegraph, radio and TV. Huge amounts of beautiful old equipment and a fully operating telephone relay switch. It's great to hear the clicks and burps when you dial the phone. They also have an operating ham station, SK0TM. Plan to spend at least half a day there. (I was just there last month and regretted the shortness of time I had allocated).

Hi all. I have five nice items on Ebay for sale. The auctions end
Sunday August 20, beginning at around 18:30 (6:30 PM California time):

Drake R4-C: LOADED and fully updated:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411060066

Drake T4X-C: Super Powerful:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411085258

Astatic D104 Night Eagle:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411041657

Drake AC-4:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411002050

Drake MS-4:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=410979461

All items are fully satisfaction guaranteed.

Thanks for your interest and good luck with your bidding.

Neil

How to get photocopies of articles

What will it cost?

For the first article, the cost is £2.75. If you order other articles
at the same time, add £2.00 per article. Note that multiple parts
count as separate articles. Please add postage and packing at £1.25
(£2.00 for overseas surface mail).

Do I need to specify anything?

We publish several books and magazines so it is important to state
that the article comes from Radio Today. Please also give the article
title as closely as you can, and the year and issue it appeared in.

How do I order?

Cheques should be drawn on a UK bank and made payable to the
publisher: Radio Society of Great Britain.

Send to: Radio Today Photocopy Service, RSGB Sales, Lambda House,
Cranborne Road, Potters Bar, Herts EN6 3JE.

Or you can make a credit-card order by e-mail to sales@rsgb.org.uk, by
telephone to 01707 659015, or by fax to 01707 645105.

Strictly speaking I guess this really is not the place for a posting for a typewriter; but having tried typewriter newsgroups without success I figured it worth a shot.

I am looking to buy a MILL TYPEWRITER. Such machined were manufactured for use by telegraphers and had only a single case (all capitals) of letters. Typically there was no SHIFT key and many times the typewriter had sprockets surrounding the platen.

If you know of one or have one I would appreciate hearing from you.

734. FS: Print your own high-quality QSLs!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-17 00:00:00 UTC
From: N7GSU <robin@n7gsu.com>
Message-ID: <GH2n5.509$uX.2650@newsfeed.slurp.net>
Source record: 62692

N7GSU QSLs will design custom, high-quality, color QSLs for a flat $30. The designs are sent to you in PDF format and maybe printed as needed using your color printer and readily available card stock.

If you are a member of FISTS, FISTS Northwest, FISTS New England CW Club or QCWA - I have in stock designs that can be customized with your info for only $15.

If you are planning a special event or DXpedition, you owe it to yourself to check into having me design that special, custom QSL for you. If your club doesn't have a logo, needs a club QSL design for it's members, or wants to sponsor an operating award; let me design these for you! Custom QSLs are a flat $30, logo designs and custom award certificates average $30-$50. This includes designs incorporating color photos!

Payment can be accepted by Visa or Mastercard, or by email via PayPal. I also accept checks and MO's. Checkout the website at:

http://www.n7gsu.com and see what I can do. The site is still under construction, but new content is being added daily. If you have an idea you'd like turned into a custom QSL, logo or award certificate... give me a try!

73,

Robin Faulkner, N7GSU

Myron I think you are correct.
I recall those balloons also in 'Surplus' sales after W.W.II. Maybe it was the British ones that used a kite. That braided fabric and copper (or bronze) beautiful stuff. Something like that was also used with the T1154 and R1155 in British bombers such as the Lancaster as a 'Trailing Wire' flying antenna.
Anyone got an idea about the hand generators?
Summary.
1) Mentioned for sale: Don't know what they are for.
2) Assumption/Suggestion they were/are telephone ringing hand generators. (Long boring diatribe on telephone ringing by myself).
3) New suggestion that they are/were part of 'Gibson Girl' emergency hand cranked radios. (Thanks for explanation of 'Gibson' by Brian McAllister).
Terry S.

I just finished going through 2 170's (one was an "A"). The LO appears to me to be a real culprit in the ones I've been associated with. A scope is almost a requirement to check if the first and second conversion oscillators are OK. I'm told that there are also 2 of the IF cans that go out with some regularity. When I was selling off one of my junkers, I got quite a few responses to one or two of the cans. One of ones I just fixed had a bad conversion oscillator crystal. Luckily I had one, on hand.
To reiterate, if the B+ voltages are OK (the difference in the glow of the VR tube is probably OK. Mine does that when going to standby. Reason: Load on circuit drops, voltage across VR tube changes.), proceed and ensure that the oscillators are functioning. On 160 and 80, only the 6C4 is oscillating (diff req for each band, of course). Above 80 meters, the second oscillator portion of V3 comes into play. Its a fixed freq of 2.580 MHz. After that, it gets down to injecting a signal at Pin 1 of V4 (455 kHz) and checking the IF and audio chain. Then back to the antenna with an appropriate input signal for band/frequency. Another set of hints can be found at the BAMA website.
ftp:bama.sbc.edu/downloads/hammarlu/hq170txt/hq170.txt (I think that's correct), or just search on bama+hammarlund. Good luck with the project.

Subject: FS: APS-104 radar modulator

FS: mil surplus modulator unit from APS-104 search radar (likely from
B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron
(in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers
and a few smaller tubes, oil caps, relays, transformers and other parts
all in airtight aluminum canister. Also have copy of service manual
(extra $5 for all, n/c for just the basic schematic & info). Still in
original box, but used, collector's item, $55 (prefer pick up - box
exceeds UPS size limit).(For an additional $20, I can shave down the
foam insert and modify the box for UPS shipping, just takes a lot of
time & effort to do this, and will cost at least another $40 to $60 to
ship 105 lbs.) Located in southeast Alabama, 36330 zip. Email or call
334-347-5281 day/eve/wknd.

From: "N7GSU" <robin@n7gsu.com>
Subject: FS: Print your own high-quality QSLs!

N7GSU QSLs will design custom, high-quality, color QSLs for a flat $30. The designs are sent to you in PDF format and maybe printed as needed using your color printer and readily available card stock.

If you are a member of FISTS, FISTS Northwest, FISTS New England CW Club or QCWA - I have in stock designs that can be customized with your info for only $15.

If you are planning a special event or DXpedition, you owe it to yourself to check into having me design that special, custom QSL for you. If your club doesn't have a logo, needs a club QSL design for it's members, or wants to sponsor an operating award; let me design these for you! Custom QSLs are a flat $30, logo designs and custom award certificates average $30-$50. This includes designs incorporating color photos!

Payment can be accepted by Visa or Mastercard, or by email via PayPal. I also accept checks and MO's. Checkout the website at:

http://www.n7gsu.com and see what I can do. The site is still under construction, but new content is being added daily. If you have an idea you'd like turned into a custom QSL, logo or award certificate... give me a try!

From: radio@udel.edu
Subject: Help with HQ-170 needed

I just got an HQ-170 which lit up, received dimly for a day, now hears
the calibrator
and some noise, and that's about it. The voltage regulator glows
differently when switch goes to receive/send/calibrate.

I have zero experience with such critters and am looking for someone to
walk me through what I need to do to get it in working shape.

Thanks and 73

Bob N9GG

Date: Fri, 18 Aug 2000 07:02:55 -0400
From: "D. S. Platt" <jeepp@erols.com>
Subject: Help with HQ-170 needed

I just finished going through 2 170's (one was an "A"). The LO appears to
me to be a real culprit in the ones I've been associated with. A scope is
almost a requirement to check if the first and second conversion
oscillators are OK. I'm told that there are also 2 of the IF cans that go
out with some regularity. When I was selling off one of my junkers, I got
quite a few responses to one or two of the cans. One of ones I just fixed
had a bad conversion oscillator crystal. Luckily I had one, on hand.
To reiterate, if the B+ voltages are OK (the difference in the glow of the
VR tube is probably OK. Mine does that when going to standby. Reason:
Load on circuit drops, voltage across VR tube changes.), proceed and ensure
that the oscillators are functioning. On 160 and 80, only the 6C4 is
oscillating (diff req for each band, of course). Above 80 meters, the
second oscillator portion of V3 comes into play. Its a fixed freq of 2.580
MHz. After that, it gets down to injecting a signal at Pin 1 of V4 (455
kHz) and checking the IF and audio chain. Then back to the antenna with an
appropriate input signal for band/frequency. Another set of hints can be
found at the BAMA website.
ftp:bama.sbc.edu/downloads/hammarlu/hq170txt/hq170.txt (I think that's
correct), or just search on bama+hammarlund. Good luck with the project.

By ALL means go to the Techniska Museet, there is a communications museum there that is totally DYNOMITE!!! It is wonderful. Four sections, one each for telephone, telegraph, radio and TV. Huge amounts of beautiful old equipment and a fully operating telephone relay switch. It's great to hear the clicks and burps when you dial the phone. They also have an operating ham station, SK0TM. Plan to spend at least half a day there. (I was just there last month and regretted the shortness of time I had allocated).

Subject: What to do with old stuff

Gee, I wish I could find someone like you in my area. I have always said that building "stuff" was one of the main reasons I got into ham radio to begin with. It's really hard to find anyone in my area who will help with more than just piecing together an antenna system.

From: "W9STB" <telegrapher@hotmail.com>
Subject: WTB: Mill typewriter (All capitals)

Strictly speaking I guess this really is not the place for a posting for a typewriter; but having tried typewriter newsgroups without success I figured it worth a shot.

I am looking to buy a MILL TYPEWRITER. Such machined were manufactured for use by telegraphers and had only a single case (all capitals) of letters. Typically there was no SHIFT key and many times the typewriter had sprockets surrounding the platen.

If you know of one or have one I would appreciate hearing from you.

From: "KGL-900" <kgl900@giznet.com>
Subject: Astor Stereogram

Does anyone know of the following StereoGram:

Make: Astor
Model: Unknown (Possibly G18AA)
Made: 1968

The problem:

No ouput, from any of the inputs (gram, din, tv, radio)
(Although there is noise (like pink noise) coming from the left channel
amp)
The right channel amp is not producing anything.

I have been through and re-soldered all the joints, still no luck.
Does anyone have any idea what they fault may be?

Thanks;
Stew

Subject: Dritz is an ass hole ... and I am sorry!!! 2963

Hey all ... Yesterday I accidentally sent out an invite to my penpal and mailing list site ... thinking that it would be OK for the rec mailing list ... unfortunately there is this ass hole named dritz ... I think he is dritz@princeton.com or dritz@atlantic.net .... any way he is a real anal prick with no life. So I saw this other post on the internet with my email address on it and I emailed him and asked him what the deal was ... and why I was on this report ... and that I didnt know what I did wrong
and what I could do to rectify it ...

anyway this ass hole then goes back and tells his mommy and about anyone else he could think of about this issue ... he is such an anal prick ...

anyway I just wanted to send this mail to the rec newsgroup and let all of you know that I am sorry if I cause you any inconvenience at all ... and if I did I just wanted to appolgize.

If you want to contact me to discuss this please drop me an email at einstein@cuy.net I would really like to hear from all of you and we can discuss this off line. Thank you. einstein@cuy.net

=======
Hi Dave -- AVC is Automatic Volume Control -- when the incoming signal is strong -- AVC cuts back on the receiver gain and vice versa. AVC tends to keep a constant volume regardless signal fading.

MVC is Manual Volume Control where the receiver gain is controlled by the RF GAIN knob (If you have one) -- otherwise the receiver is in a full gain configuration.

Here is how one receiver AVC works:
AUTOMATIC VOLUME CONTROL - Delayed, amplified AVC gives constant output within 6 db for a change in r-f
input from 5 microvolts to 0.5 volt. AVC is applied to the r-f stages and three i-f stages. The proper amount of AVC delay is employed for maximum sensitivity on weak signals.

Subject: Switch Question

The switch you mention is (automatic volume control) and(manual volume control).. you may find that cw signals are more easily controlled in mvc position, broadcast and other am will be fine on avc setting.. may be Kenwood is a spin off from Lafayette , I heard about Lafayette long beforeI heard of Kenwood.. have fun Harold W4PQW

Date: Sat, 12 Aug 2000 20:35:35 -0700
From: no@sp.am
Subject: Switch Question

MVC = Manual Volume Control
AVC = Automatic Volume Control

For voice/music, etc. AVC is probably best. It will tend to keep the gain of the receiver such that the signal will remain fairly constant with fading, etc. You can usually run the RF gain control up full and adjust the volume by using the AF gain control for comfortable volume if you have the AVC on.

For CW (code) or for SSB the usual process is to use MVC and turn the AF gain 1/2 to 3/4 of the way up (or more) depending on how much hum is produced and start with the RF gain all the way down and advance it until you can hear the signal you're trying to tune in. Of course for both CW and SSB you need to have the BFO (Beat Frequency Oscillator) turned on and adjust its pitch while you rock the tuning back and forth to give the strongest signal and a pleasant tone on CW and to make the voice as clear as you can on SSB. Using MVC you provide the gain control by riding the RF gain control. Once you've decided where you want the AF gain control, make adjustments in how loud the signal is by adjusting the RF gain and keeping the signal low enough so that it's not distorted.

If you try to read CW or SSB with the AVC on, since you must have the BFO on to introduce a beat signal for CW or to reinsert the missing carrier on SSB, the BFO signal will cause the AVC to decrease sensitivity to the point where you usually won't be able to hear the desired signal. More modern receivers will have a product detector which can operate with the RF gain full on on both CW and SSB.

No, Lafayette was a private label of (guess what?) Lafayette Radio and may have had Trio-Kenwood produce something for them but Kenwood is definitely NOT a derivative of Lafayette. Lafayette did not design and produce gear but put their label on other company's products.

Subject: WTB AMPHENOL MIC CONNECTORS

Hello Ralph,

Mouser does not list them but I think Newark does. Look
under Wire Pro as the manufacturer. They should run
around $8 each.

BTW, I always look at the el cheapo mikes at a hamfest
because you sometimes can buy a mike for a dollar or so
with this connector on it.

good luck & 73,
Phil

751. IC-730 question and parts request

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-18 00:00:00 UTC
From: Jan Ditzian <ditzian@alltel.net>
Message-ID: <399D6BA5.A6CA16C7@alltel.net>
Source record: 62570

I just purchased an Icom IC-730, the same radio that I had about 15 years ago. I do not know whether it qualifies as a boat anchor, but I have some technical questions and I would like some parts, if they are not expensive.

This radio was supposedly aligned at the factory recently, and my faith in Icom is so great that I immediately checked it out (first day I had it), and the alignment was off in several ways.

I realigned the frequency readout using a digital-mode receive program and WWV, aligning the transmitted signal with the correct spot on the program's frequency display. This suddenly put lots of qsos at frequencies that ended with 0 kHz, so I guess that now I agree with most folks about the frequency we are on.

The two sidebands sound quite different on noise, with the IF shift centered. The lower sideband position is far higher in pitch than the upper sideband. I can move the IF Shift control to a different position such that they sound the same, but this is almost halfway to one side. I strongly suspect that there is a trimmer component (resistor, capacitor, or coil) that can be adjusted to bring the balance point back to the middle of the IF Shift control. Can someone tell me how to find this trimmer?

I would also like to replace the screws used to hold this thing together, both the internal flathead screws and the external roundhead black screws. Is there some place that sells this size hardware at a reasonable price? I do not even need black screws, they could be plain steel, nickel, or whatever. I just do not want to have to use my impact screwdriver again to remove these screws that are almost completely stripped where the Phillips screwdriver inserts.

Thank you for any assistance.

73,
Jan, KX2A

Reading in "Modern Manners; Etiquette for Rude People" by P. J. O'Rourke:

Henry Beard, one of the founders of the National Lampoon magazine and America's premier living expert on playing with food, has a great stunt with stainless-steel hinged-top coffee creamers. Using his thumb to move the creamer lid, Henry gets "Carl the Creamer" to talk. Carl (he speaks in a very high voice) says, "Henry, I'm hungry." Henry feeds Carl all sorts of things -- sugar packets, bits of squashed-up food, cigarette butts, and so on. But Carl always eats too much. "Henry, I feel sick," he says. The Carl throws up on somebody at the table whom no one can stand.

These sound like the GN-42 used in TA-43 and TA-312 field phones, the
extra terminal is for the internal switch which disconnects the phone

when the generator is cranked. Many of these were made by Kellogg/ITT
and Radio Mfg Corp.

From: ljl160@aol.com (LJL160)
Subject: Antique tubes nib or tested good

I and Dick K1RAW have been consigned by a recent estate 150 to 200 antique
tubes. All either new or tested good. Prices checked out of recent catalogues
about $3000 or so. Would like to sell as a lot if possible at a very
reasonable price. A few examples are Deforest 802, CRC808, Z-51, Western
216A,Natinal NX280, Silvertone 80, RCA10Y C335, c235,RCA UY227B,Zenith Z27B,
Hytron 2A3,803, USN801,Simplex 35, Raytheon
RK20A,42,35-51,15R,UX224,ux245Cunningham
CX3013B29,884,1D21,3c24,717A,HY615,CRC955,CRC956,TZ20,3D6,829Bs,T40,T55,cr
c2050,CX371B,EX210,1v2,CL45B,2K26,59,eveready er281,6l6s,1625,807,6b4g,etc etc.
Too many too list. Ill try making up the full count and complete list by
Monday or Tuesday. Please e mail me if interested. Pickup would be preferred
but we could ship them as well. Thanks

Subject: e-bay prices

Funny you should say that, Because I trade heavily on the various auction
boards, but almost never in Ham Gear. I have seen Heathkit stuff go for 5
times what it should, and I LIKE the stuff! I was seriously thinking about
haunting garage sales, fleas markets and thrift stores buying it up, except
it pains me to see it so darn expensive on resale. Did anyone see what the
unassembled HW9 with accesories went for on ENAY recently? You could, on the
same day, have bought a 1200 watt amp, an HF rig, and an all mode 2M rig all
together for the price of that HW9. WHEW! I sold an HW8 at the TRW flea
market 4 years ago for $25 bucks to a kid and felt bad about it.

From: "N7GSU"
Subject: FS: Print your own high-quality QSLs!

N7GSU QSLs will design custom, high-quality, color QSLs for a flat $30. The designs are sent to you in PDF format and maybe printed as needed using your color printer and readily available card stock.

If you are a member of FISTS, FISTS Northwest, FISTS New England CW Club or QCWA - I have in stock designs that can be customized with your info for only $15.

If you are planning a special event or DXpedition, you owe it to yourself to check into having me design that special, custom QSL for you. If your club doesn't have a logo, needs a club QSL design for it's members, or wants to sponsor an operating award; let me design these for you! Custom QSLs are a flat $30, logo designs and custom award certificates average $30-$50. This includes designs incorporating color photos!

Payment can be accepted by Visa or Mastercard, or by email via PayPal. I also accept checks and MO's. Checkout the website at:

http://www.n7gsu.com and see what I can do. The site is still under construction, but new content is being added daily. If you have an idea

you'd like turned into a custom QSL, logo or award certificate... give me a try!

From: Jan Ditzian
Subject: IC-730 question and parts request

I just purchased an Icom IC-730, the same radio that I had about 15 years ago. I do not know whether it qualifies as a boat anchor, but I have some technical questions and I would like some parts, if they are not expensive.

This radio was supposedly aligned at the factory recently, and my faith in Icom is so great that I immediately checked it out (first day I had it), and the alignment was off in several ways.

I realigned the frequency readout using a digital-mode receive program and WWV, aligning the transmitted signal with the correct spot on the program's frequency display. This suddenly put lots of qsos at frequencies that ended with 0 kHz, so I guess that now I agree with most folks about the frequency we are on.

The two sidebands sound quite different on noise, with the IF shift centered. The lower sideband position is far higher in pitch than the upper sideband. I can move the IF Shift control to a different position such that they sound the same, but this is almost halfway to one side. I strongly suspect that there is a trimmer component (resistor, capacitor, or coil) that can be adjusted to bring the balance point back to the middle of the IF Shift control. Can someone tell me how to find this trimmer?

I would also like to replace the screws used to hold this thing together, both the internal flathead screws and the external roundhead black screws. Is there some place that sells this size hardware at a reasonable price? I do not even need black screws, they could be plain steel, nickel, or whatever. I just do

not want to have to use my impact screwdriver again to remove these screws that are almost completely stripped where the Phillips screwdriver inserts.

Thank you for any assistance.

> 8417, 6KV6A.

As just a visitor to this list I imagine the following links are pretty much old news, but I'll mention them in the off chance that they aren't that well known after all:

"The Military Commo Equipment List," at URL

"Tube Database Search," at URL

"Nostalgia Air Tube Substitution & Characteristics Guide," at URL

The first URL, above, includes links to the latter two; all three are currently valid.

Referring to your inquiry, NJ7P's excellent online lookup feature (the second link above) shows entries for the 6KV6 and 6KV6A. The 6KV6 returns the following, along with the usual data:

> Prefered Substitutes 6JG6
> Substitutes. . . . . None

Subject: Tektronix selling price survey updated

My selling price survey of Tek stuff on eBay has been updated. The
survey
now includes 1157 different instruments (scopes, probes, plug-ins etc),
and
there are over 12,750 prices data entries gathered during the past 12+
months.
Some HP, GR and Wavetek stuff too. The number of vintage GR listings has
increased too.

My site is located at :

http://www.vaxxine.com/phil/

Comments/suggestions on the format greatly appreciated.

By ALL means go to the Techniska Museet, there is a communications
museum there that is totally DYNOMITE!!! It is wonderful. Four
sections, one each for telephone, telegraph, radio and TV. Huge amounts
of beautiful old equipment and a fully operating telephone relay
switch. It's great to hear the clicks and burps when you dial the
phone. They also have an operating ham station, SK0TM. Plan to spend
at least half a day there. (I was just there last month and regretted
the shortness of time I had allocated).

HELP!
Any body ever heard of these two Vintage tube items? I am trying to help
ID
them for a friend. He wants to sell them. Any ideas on their value?

#1)Magnavox audio fq. amp type AC3/modC/#2236. It used 3 type 33
push-twist
tubes, external &#65533;A&B&#65533; battteries. Black wrinkle finish.

#2) Heintz/Kaufman Ltd, San Francisco. 3800kc to 23000kc Radio receiver
type
900 (regenerative). Serial number 113, USPat 1,507,689-1,907,806.
Cabinet is
solid copper. Beautiful piece. Outstanding quality, never seen anything
like
it! I am not interested in this stuff myself. I will print out and
forward

any info to the owner. Also if anybody is interested in these, I will
give
you his phone number.

Thanks for reading and especially thanks for any help.

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone

7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

And who pissed in your cornflakes this morning? Especially when he posted
both an Ontario callsign (VE3) and the web site URL?

Sheesh!

It works fine except when I am in Windows.

Subject: Astor Stereogram

Dear Stew,

You don't mention whether the radiogram is solid state or uses valves. However, it might be worthwhile running voltage checks on each channel, as well as trying to trace the signal paths. A common fault in elderly audio equipment is dirty switches. These can present an exceptionally high impedance/resistance to a small signal, such that the signal just doesn't get through. In the UK we can buy Super Servisol, an aerosol switch cleaner, which does the job. There is a warning about certain plastics that can be attacked by the cleaner, but I've never had any problems with it. I have "fixed" at least three audio items using this stuff. I don't know if it is sold in the USA, but there will be an equivalent product.

The best of luck!

Subject: FS: Pair of 815 Transmitting tubes.

Are you sure you are thinking of the 815? AFAIK, the 815 is a heater/cathode type, not a bright emitter filamentary tube. The 815 is a dual beam power tube, with 2 separate plate caps. Perhaps you are thinking of 811, 813, or 814?

The 6KV6A is equivilant to a 17KV6A and a 22KV6A. I don't have
anything on the 8417.

The 6KV6A is a Color TV type Shunt Regulator tube.

Dear Fellow Boatanchor Enthusiasts,

Would anybody know equivalent numbers for the following tubes, some of which
might be used in Drake gear?

8417, 6KV6A.

Thanks and 73,

Evan

Date: Sun, 13 Aug 2000 21:49:08 GMT
From:
Subject: Need tube cross ref info

Evan -

8417 is a uncommon audio output tube, used in the Dynaco Mark VI and
Quicksilver 8417 among others. They have gotten fairly pricey as there is
no good substitute. There is no equivalent although KT88's can be
substituted in many cases with substantial modifications.

The 8417 is a beam power tube, once commonly used in audio service.
Discontinued, and getting quite scarce and pricey these days. Perhaps the
circuit could be modified to use a 6550 or other easier to get tube.

Subject: Value of Atwater Kent gear

I would like to know the value of the following AK gear:

Model 40 radio in EXELENT working condition

Model H 7700 (I think) Loud Speaker

Service manual and parts list for complete line in 1928.

Please respond via email
howardsh@lehigh.edu

======
Howard there is a Model 40 on E-Bay right now -- but the auction is not over for another 5 days. Keep an eye on this and the final auction bid might give you an idea what folks are paying these days. See URL: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=407179001

From: Terry Sanford
Subject: Victor Short Wave Adaptor.

Looking for something else I came across a 'short waver converter?

Brown crackle cabinet (top missing), wooden base. Unit is 17 inches wide, 10 inches deep and 8 inches high. Knobs missing. Overall condition 'fair'; maybe a three or a four on scale of 10.

At first glance it looks like a 1930s radio receiver. I was puzzling over the make until I noticed the small "His Master's Voice" symbols moulded into the two, what I will call the 'escutcheons', through which you view the 'tuning' dials. 0 to 100. Then I found the original label on the bottom!
"Victor Short Wave Adaptor; Range 16.5 to 110 meters. " and "Victor Division, RCA Victor Company, Inc. Camden. N.J. U.S.A."

The two cord driven metal tuning dials tuning dials are each coupled to a single gang variable capacitor which are guessed to be 200 pfd. variety with wider spacing than later variable capacitors. One must be 'tuning' and the other 'oscillator'?

Also projecting through the front panel are a rotary on/off switch and a potentiometer which I've just noticed is marked "Feb12 1931 'From Magnetic Phono Cartridge' '4513'." judging by the wiring, what looks resoldered and an incorrect shaft length this may not be an original item? (Idea? Could be a reaction control!) Unless it was modified; see item removed below.

Inside the case there is a metal removable chassis on which there is a black paxolin board riveted to the main chassis mounting five (five

pin) sockets. The five sockets are; UY224 (also a top cap wire), ANT (into which a single winding 'ANT' coil marked "23-45 M" {presumably metres?}is plugged, UY227, OSC coil (similar with two windings), UY227.

Tubes are out but I think I've got two of them somewhere. I don't think my '30 year old' tube tester which is also "somewhere" has a that kind of socket on it!

Underneath there are a number of metal cased capacitors, three brown plastic Aerovox USA capacitors and three carbon composition resistors. Values not visible except on one Aerovox, .005; which appears to be an 'output' of some sort. Wired with fabric wire and uses quite a lot of riveted construction.

Along the back of the paxolin sub chassis are five unmarked insulated screw terminals. Am assuming they will be; Antenna, Common negative (chassis), Heater, B+, Output. Tracing required. Presumably the output was in, say, the broadcast band to a regular receiver. With separately adjustable oscillator and tuning I suppose you could pick different output frequencies and/or use the regular receiver for fine tuning! As per a Q5er.

Apart from the missing top cover from a components point of view it appears to be complete except that someone had drilled out the rivets of what was probably a transformer (or choke) mounted mid front below the chassis, you can also see four mounting tag marks and remains of two rivets! But cant see any missing wiring other than the potentiometer mentioned above.

As I prepare to trace out the circuit of this interesting item, I think I've got tube pin connections somewhere and possibly get it going, if possible, on the one set of coils in it (13 Mhz to 6.6 Mhz. which is a 2:1 ratio btw) can anyone offer advice or suggest any source for information. Any help would be appreciated.

Many thanks for reading.

Terry S. Newfoundland. About six to eight miles from where Marconi in 1901 received the first trans. Atlantic wireless message from Cornwall in England.

Neat Find.

I've never heard of these before. SW converters (VHF too!) have been one of my 'hot buttons for a long time.

Good luck with it.

I bought an old Sparton converter several years ago, and found the wiring diagram in the RCC manuals at the library...I believe the year was 1929. What you have should be somewhere between 1927-1933.

Subject: WDX calls/Hank Bennett W2PNA

Someone wandered down this path once before looking for the WPE and WDX SWL callsigns. There is a WPE website someplace and Popular Electronics has an interactive e-mail capability so you might check with them. Of course, I may be confusing Hank Bennett with Tom Kneitel as they were both involved in that at one time or another. Tom is with Popular Communications (and CQ?) now and may be a source of some leads.

Sorry I do not have anything more specific.

> unassembled HW9 with accesories went for on ENAY recently?

Now that would have been a *true* (and very rare) collectors item, which is
what drove up the price..

A Ham who used to live about 30 miles from here had just about, if not
every, example of heathkits. He not only had the radio stuff, but computers
and TVs. Now, there would have been an estate sale.

The Hallicrafters SX-115s were going out of sight and currently much of the
Hallicrafters stuff is somewhat above market, *but* it's coming back down.
They are now running less than half what they did a week ago. A month ago
they were in the market value range.

There was an FPM 200 on there which is a true antique and very rare. Not a
very good radio, but rare. Although it went for as much as my *new* station
it was probably about right.

So maybe they will get back down to where I can put together an operating
station. Actually I do have an HT32A and an HT32B, but they need some
cleaning. They do work though<G>

I'd like to get the whole Halliscratchers line eventually, but not all at
once. For what they weight, I couldn't afford that much equipment by the
pound<G>

I just purchased a nice SX101A for $100 locally and there are two of them
(also nice) on e-bay at $225 with a couple of days to go. Even for very
clean ones that is a little above market.

It's possible there is a sudden increase in collecting the stuff, or some
other reason the prices spiked.

> You could, on the
> same day, have bought a 1200 watt amp, an HF rig, and an all mode 2M rig
all

> together for the price of that HW9.

Yah, but in the case of a Heathkit collector that thing was gold, or more so.
A genuine "Original" *untouched* kit.

Collecting is funnny business. If you bought one of the "Centennial Winchester Rifles" in 1976, the box alone is now worth quite a few hundred dollars (It can be worth more than the original price of the rifle). A calendar that Winchester gave away, with the "Declaration of Independence" on the cover is quite valuable now.

Radios? I guess the old saying that "One man's junk is another's treasure". really holds true<LOL> Cuz there is an afful lot of junk out there and buying the old boat anchors has to be love, as the best of them don't hold a candle to todays high quality rigs.

One thing the old rigs do well that todays don't is "heat the shack". <:-))

The difficult thing is to know market value and then not get pushed above that.
Even then there will be those who want a specific piece and no one is going to outbid them reguardless of market value. While others can just get caught up in the bidding with the "Just a *little* more might get it thought.

It only takes one or two items from a group that go way over market to bring the rest up a bit, but things *usually* return to more or less normal within a few weeks, or months.

Depends on the reason why it went up and with any auction there can be many reasons. Some of them not good.

Guys, all of the complaints about eBay should be tempered with some reason and logic.

1. The seller .. The seller wants to get as much as he can for his item (whatever it is) and sell it as quickly as possible. I don't think there is any argument here!

2. The Buyer .. The buyer want neat stuff as cheap as possible. There can be no arguments here!

The problem is that there are prospective buyers that think they should be able to buy whatever they want at a price that they think is fair! W R O N G !! The friggin market dictates the price and those who pay get and those who want to complain about it come here!

I have been around this newsgroup for 6 years and bought and sold a lot of gear. We have all had to put up with the damn whining "price police" like Donnie, who gave people a hard time and hassled people until they got sick of it and left for a better forum. There are those guys who would see a fair price on an item and call up with an insulting offer. They drove people to another forum too.

I just advertised a Kenwood TS-940S (20 million serial number) here for $850 and got many insulting offers. One guy emailed me and his text read "final offer $550 and you pay shipping". I got phone calls telling me how unfair my asking price was and they would give me XX and if I was a reasonable person I'd see it their way.

Well I didn't! I put it on eBay and in the first 8 hours I had over 80 people look at it. In 6 days of auction I had a total of over 900 people view it. One gentleman wanted it real bad and called me and asked me what I was looking to get. I told him $850 plus shipping .. he PayPaled the funds immediately .. he got the radio .. I got my $850 .. and not once did I have to put up with the bull that I did by posting it here!

So all you whiners out there and you "price police" that ruined this group .. go ahead and complain. Fact is .. Ebay rules for both seller (who gets a fair market price and no bullshit) and the buyer (who might pay a little more but gets protection from fraud, credit card convenience, knowledge

about the integrity of the seller, huge selection of great goods with pictures, etc, etc, etc.). Or you could sit here and whine a little more!!

Larry:

I'm inclined to agree with you here. Personally, I like to buy & sell within the newsgroups, however, for the same reasons you've pointed out, I've been driven to go the Ebay route. I try to be fair at all times. What I started doing is initially posting items in the newsgroups, for sale, with a mention that if it doesn't sell within a specified time frame, I will post it on Ebay. This way, someone in the newsgroup who is serious, will usually respond. If I don't get my asking price, or something "reasonably" close, then it goes to Ebay. Without exception, Ebay has always netted me a better price, then I was asking in the newsgroups. This is not a bad thing! I don't force anyone to bid at all, let alone a higher price than I was willing to settle for. They simply paid what they were willing to pay, for an item they wanted. I think this results from reaching a MUCH larger audience! You would be surprised the number of people who know nothing about newsgroups!

I think if newsgroup buyers want to see postings return to the newsgroups, they need to be serious, and reasonable. I've posted items here that were worth much more than my asking price, and someone will inevitably come back with an offer of sometimes hundreds of dollars less! Or they don't want to pay shipping, etc.

It's only logical that if a person is selling an item, and they agree to pay the shipping charges, then they have already thought out, and included those shipping charges in the price of the item. I choose to break them out separately, in case someone locally responds to the ad, and can pick it up, then they obviously don't have to pay shipping.

So what is the big attraction to Ebay? Clean, and green transactions!

eBay is a "textbook" free market system stripped down to the bare minimum.
What could be better! The fair market value of a piece of equipment is
whatever someone is willing to pay. I with you Roger.

There are those who swear by e-bay and those who swear at it.

Read my follow-up post to the original.
Then pay attention to what I wrote.
I only asked if any one else had noticed the prices going up. Nothing more
and no insinuations.

Your original point is well taken. The TCS rig that went for about $1200 is an example. Perhaps ebay is setting the pace, but its on-line only! Ebay prices are laughed at at all the fests in the DC area and, I might ad, equipment sells at what one might call slightly more reasonable prices. Maybe its because when the gear is up front and personal, where you can see it, the fantasy wears thin, quickly.

Funny you should say that, Because I trade heavily on the various auction boards, but almost never in Ham Gear. I have seen Heathkit stuff go for 5 times what it should, and I LIKE the stuff! I was seriously thinking about haunting garage sales, fleas markets and thrift stores buying it up, except it pains me to see it so darn expensive on resale. Did anyone see what the unassembled HW9 with accesories went for on ENAY recently? You could, on the same day, have bought a 1200 watt amp, an HF rig, and an all mode 2M rig all together for the price of that HW9. WHEW! I sold an HW8 at the TRW flea market 4 years ago for $25 bucks to a kid and felt bad about it.

Evan, K9SQG, wrote:

> Would anybody know equivalent numbers for the following tubes,
> some of which might be used in Drake gear?
>
> 8417, 6KV6A.

As just a visitor to this list I imagine the following links are pretty much old news, but I'll mention them in the off chance that they aren't that well known after all:

"The Military Commo Equipment List," at URL <http://www.telalink.net/~badger/millist/mi.html>

"Tube Database Search," at URL <http://www.nj7p.org/cgi-bin/tube>

"Nostalgia Air Tube Substitution & Characteristics Guide," at URL <http://www.NostalgiaAir.org/otcr.htm>

The first URL, above, includes links to the latter two; all three are currently valid.

Referring to your inquiry, NJ7P's excellent online lookup feature (the second link above) shows entries for the 6KV6 and 6KV6A. The 6KV6 returns the following, along with the usual data:

> Prefered Substitutes 6JG6
> Substitutes. . . . . None

Source record: 62592

Wanted: Schematic and xtal info for a GE 4ES18A6 commercial FM mobile transceiver (40-50 MHz).

The transmitter is a "PL 7668337 G6 Rev" strip.

The receiver is a "PL 7484534G 11 Rev A" strip.

The original power supply has been replaced with a 120 VAC unit (looks like OEM), which is straightforward enough, so P/S data is optional.

(I =think= this is vintage "pre-prog" but I have only the Vol II book of the GE Pre-Progress Line, which doesn't cover the low band units.)

Any info or leads will be much appreciated. Will gladly remit for copying and postage.

TIA,
Lee_K

815. Re: Lavoie Labs WWV Comparator manual needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-20 00:00:00 UTC
From: arworth@aol.com
Message-ID: <20000820110202.18783.00000515@ng-fs1.aol.com>
Source record: 62444

The Lavoie LA800D is a freq comparator that takes a sub-multiple of 10 mhz and displays the freq error as a rotating dot on the crt. Direction and rate of rotation give the error. WWV is received on either 5.0 or 15.0 MHz. Panel controls and inputs are self explanatory.
I have a copy of manual here somewhere. Send me your mailing adr and I will try to find it and send a copy Another possible source is Tucker Electronics in Dallas. Thats where I got mine.

816. CONSUMER ALERT - Beware of Eucalypt Software - Makers of Autopost & Rocketfuel!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-20 00:00:00 UTC
From: Warning-Warning@yeeclfqtll.edu
Message-ID: <B3571C35C.dnolovb@apmson.com>
Source record: 62445

Eucalypt Software - Makers of Autopost & Rocketfuel --- Ripped Me Off!!!
-
All potential buyers should be warned to steer clear of this company. They have a repeated pattern
of ripping people off and ignoring requests for support.
-
I know someone who sent in the $10 registration fee for Autopost TWICE (thinking the first one may
have gotten lost) and in both instances, never got a registered version of the program and all of his
emails were completely ignored.
-
I myself purchased Rocketfuel on-line and had to pull teeth to get an unlock code. The web site was very
quick to take my money, but no registration/unlock code came for days and days. I repeatedly emailed them,
only to receive nothing but autoresponses. After 5 days I sent them a message stating that if I did not have
a working version of the program by the close of business that day, that I would challenge the credit card
charge. Magically, the code arrived several hours later.
-
What kind of way to do business is that?
-
In any case, its academic... there are other products available for free that do virtually the same thing
and I only wish that I had known about them before I wasted my time with Eucalypt Software.
-
If your in need of automatic news posting software, there is nothing better than "NNTP Power Post 2000".
It's graciously been made available free from the following web site:
-
http://net-toys.8k.com/
-
Save your money... your time... and the aggravation!
-
Peace,
-
PPN
-
-
PS: I have no affiliation with the makers of PowerPost 2000.
-

Source record: 62457

This was posted a few weeks back and we thought the rig was sold but the proposed buyer never came through so here it is again.....

A friend of mine asked me to help sell his HW-101, Manual, Matching speaker, Matching AC supply, and Turner "Plus 3" desk mic. No Mods. The rig has been in storage for years and looks great! A couple of small scratches on the top cover,
other than that, it looks brand new. Haven't tried it on transmit, but receive works ok with exception of some noisy pots and wafer switches. Great for collector wanting one that would be easily restored to mint condx. Asking $200 + shipping.

Email offers to: dausley@hiwaay.net

Hello. Thanks for looking at this. Today, I picked up a Lavoie Labs Model LA800D WWV Comparator. It is an interesting piece of equipment probably made in the sixties that has an internal oscillator that is locked on to WWV to produce a precise 10 MHz output. I'd really like to have a manual for this. I would be glad to pay copying expenses and postage.

Thanks
John

834. Time for a R-390 Postsge Stamp?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-20 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000820091424.00292.00000670@ng-df1.aol.com>
Source record: 62536

I recently found this on E-Bay; apparently certain cash-hungry governments (including our own) will put just about ANYTHING on a postage stamp if it'll bring in cash (Disney characters, Daffy Duck, movie stars, etc, etc). So this might not be as hard as it first seems!

Turkemenistan even had Kim Basinger on a SERIES of stamps (not just one) (see Ebay
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=409392676).

Maybe we could convince somebody to honor the R-389, R-390, R-390A, R-391 and R-392 in a similar series; I suspect that in terms of long-term significance that these boat anchors outweigh Kim in importance (pun intended).
Any suggestions of other radios?
Maybe we should team up with the HCA and get a stamp for the SX-88; or how about the GPR-90?

Now that would have been a *true* (and very rare) collectors item, which is what drove up the price..

A Ham who used to live about 30 miles from here had just about, if not every, example of heathkits. He not only had the radio stuff, but computers and TVs. Now, there would have been an estate sale.

The Hallicrafters SX-115s were going out of sight and currently much of the Hallicrafters stuff is somewhat above market, *but* it's coming back down. They are now running less than half what they did a week ago. A month ago they were in the market value range.

There was an FPM 200 on there which is a true antique and very rare. Not a very good radio, but rare. Although it went for as much as my *new* station it was probably about right.

So maybe they will get back down to where I can put together an operating station. Actually I do have an HT32A and an HT32B, but they need some cleaning. They do work though<G>

I'd like to get the whole Halliscratchers line eventually, but not all at once. For what they weight, I couldn't afford that much equipment by the pound<G>

I just purchased a nice SX101A for $100 locally and there are two of them (also nice) on e-bay at $225 with a couple of days to go. Even for very clean ones that is a little above market.

It's possible there is a sudden increase in collecting the stuff, or some other reason the prices spiked.

> You could, on the
> same day, have bought a 1200 watt amp, an HF rig, and an all mode 2M rig all
> together for the price of that HW9.

Yah, but in the case of a Heathkit collector that thing was gold, or more so.
A genuine "Original" *untouched* kit.

Collecting is funnny business. If you bought one of the "Centennial Winchester Rifles" in 1976, the box alone is now worth quite a few hundred dollars (It can be worth more than the original price of the rifle). A calendar that Winchester gave away, with the "Declaration of Independence" on the cover is quite valuable now.

Radios? I guess the old saying that "One man's junk is another's treasure". really holds true<LOL> Cuz there is an afful lot of junk out there and buying the old boat anchors has to be love, as the best of them don't hold a candle to todays high quality rigs.

One thing the old rigs do well that todays don't is "heat the shack". <:-))

The difficult thing is to know market value and then not get pushed above that.

Even then there will be those who want a specific piece and no one is going to outbid them reguardless of market value. While others can just get caught up in the bidding with the "Just a *little* more might get it thought.

It only takes one or two items from a group that go way over market to bring the rest up a bit, but things *usually* return to more or less normal within a few weeks, or months.

Depends on the reason why it went up and with any auction there can be many reasons. Some of them not good.

Was a time when stuff like that sat on Thrift store shelves for weeks but not any more. Never see it now. A lot of the stores' back room boys have taken out commissions from the ebay sellers and the stuff never gets out front. Ah well...

<< Any one else notice that some lines of equipment are running 3 to 5 times book price on e-bay lately? >>

Viking I going for $1000 right now on eBay. I mean, sure, it's been nicely repainted. Is it worth a grand, tho?

Ranger I's above $400. Matchboxes going up to $400. It's nuts.

Subject: e-bay prices

You're right about the absurdly high prices on E-Bay, but there is no such thing as a "book price" on used ham radio equipment. it's worth as much as at least one buyer is willing to pay. I may think it's foolish for somebody to pay $400 for a Viking Ranger, but I guess some people get caught up in the excitement of an auction--even one on line--and go overboard on what they're willing to spend. Also, there's a lot of spare cash around these days.

Guys, all of the complaints about eBay should be tempered with some reason and logic.

1. The seller .. The seller wants to get as much as he can for his item (whatever it is) and sell it as quickly as possible. I don't think there is any argument here!

2. The Buyer .. The buyer want neat stuff as cheap as possible. There can be no arguments here!

The problem is that there are prospective buyers that think they should be able to buy whatever they want at a price that they think is fair! W R O N G !! The friggin market dictates the price and those who pay get and those who want to complain about it come here!

I have been around this newsgroup for 6 years and bought and sold a lot of gear. We have all had to put up with the damn whining "price police" like Donnie, who gave people a hard time and hassled people until they got sick of it and left for a better forum. There are those guys who would see a fair price on an item and call up with an insulting offer. They drove people to another forum too.

I just advertised a Kenwood TS-940S (20 million serial number) here for $850 and got many insulting offers. One guy emailed me and his text read "final offer $550 and you pay shipping". I got phone calls telling me how unfair my asking price was and they would give me XX and if I was a reasonable person I'd see it their way.

Well I didn't! I put it on eBay and in the first 8 hours I had over 80 people look at it. In 6 days of auction I had a total of over 900 people view it. One gentleman wanted it real bad and called me and asked me what I was looking to get. I told him $850 plus shipping .. he PayPaled the funds immediately .. he got the radio .. I got my $850 .. and not once did I have to put up with the bull that I did by posting it here!

So all you whiners out there and you "price police" that ruined this group .. go ahead and complain. Fact is .. Ebay rules for both seller (who gets a fair market price and no bullshit) and the buyer (who might pay a little more but gets protection from fraud, credit card convenience, knowledge about the integrity of the seller, huge selection of great goods with pictures, etc, etc, etc.). Or you could sit here and whine a little more!!

Larry:

I'm inclined to agree with you here. Personally, I like to buy & sell
within the newsgroups, however, for the same reasons you've pointed out,
I've been driven to go the Ebay route. I try to be fair at all times. What
I started doing is initially posting items in the newsgroups, for sale, with
a mention that if it doesn't sell within a specified time frame, I will post
it on Ebay. This way, someone in the newsgroup who is serious, will usually
respond. If I don't get my asking price, or something "reasonably" close,
then it goes to Ebay. Without exception, Ebay has always netted me a better
price, then I was asking in the newsgroups. This is not a bad thing! I
don't force anyone to bid at all, let alone a higher price than I was

willing to settle for. They simply paid what they were willing to pay, for an item they wanted. I think this results from reaching a MUCH larger audience! You would be surprised the number of people who know nothing about newsgroups!

I think if newsgroup buyers want to see postings return to the newsgroups, they need to be serious, and reasonable. I've posted items here that were worth much more than my asking price, and someone will inevitably come back with an offer of sometimes hundreds of dollars less! Or they don't want to pay shipping, etc.

It's only logical that if a person is selling an item, and they agree to pay the shipping charges, then they have already thought out, and included those shipping charges in the price of the item. I choose to break them out separately, in case someone locally responds to the ad, and can pick it up, then they obviously don't have to pay shipping.

So what is the big attraction to Ebay? Clean, and green transactions!

eBay is a "textbook" free market system stripped down to the bare minimum.
What could be better! The fair market value of a piece of equipment is
whatever someone is willing to pay. I with you Roger.

There are those who swear by e-bay and those who swear at it.

Read my follow-up post to the original.
Then pay attention to what I wrote.
I only asked if any one else had noticed the prices going up. Nothing more
and no insinuations.

Your original point is well taken. The TCS rig that went for about $1200 is an
example. Perhaps ebay is setting the pace, but its on-line only! Ebay prices

are laughed at at all the fests in the DC area and, I might ad, equipment sells at what one might call slightly more reasonable prices. Maybe its because when the gear is up front and personal, where you can see it, the fantasy wears thin, quickly.

Yah mean you can see the scratches and dents along with the rust and smell
the cigarette smoke up close and personal
<LOL>

Where or where is my old KWS-1/75A4 combination. It was big, noisy and
I didn't have to turn on the heat when it was running.
It also took darn near a year before it quit smelling like an ash tray.
Either that, or my sinuses were shot.

I could run both my current rigs plus the Henry and it still wouldn't get
that warm. <:-))

But just wait. by some time this winter I plan on having seperate stations
for HF, VHF, and UHF all capable of the legal limit...Unfortunately I think
the legal limit on 450 here in Michigan is still 50 watts.

Only one more section to go on the Rohn 45 and it'll be up. Then I start
with the antennas.

Subject: Lavoie Labs WWV Comparator manual needed

Hello. Thanks for looking at this. Today, I picked up a Lavoie Labs Model LA800D WWV Comparator. It is an interesting piece of equipment probably made in the sixties that has an internal oscillator that is locked on to WWV to produce a precise 10 MHz output. I'd really like to have a manual for this. I would be glad to pay copying expenses and postage.

Thanks
John

=======
Hi Dave -- AVC is Automatic Volume Control -- when the incoming signal is
strong -- AVC cuts back on the receiver gain and vice versa. AVC tends to
keep a constant volume regardless signal fading.

MVC is Manual Volume Control where the receiver gain is controlled by the RF
GAIN knob (If you have one) -- otherwise the receiver is in a full gain
configuration.

Here is how one receiver AVC works:
AUTOMATIC VOLUME CONTROL - Delayed, amplified AVC gives constant output
within 6 db for a change in r-f

input from 5 microvolts to 0.5 volt. AVC is applied to the r-f stages and
three i-f stages. The proper amount of AVC delay is employed for maximum
sensitivity on weak signals.

Subject: What is it?

On many old steel radio chassis there is a gold coating.
The military stuff had a fungicide that looked similar, but was much
thicker. This stuff looks more like anodizing, but it's on steel.

Any one know what it is and where it can be found.

Harold W4PQW

Dang, I didn't know the 815 was two 2E26s! (Open large book of things I didn't know and make another entry...) Makes perfect sense, though.

Speaking of 10 meters, does anybody know how 807s behave up there? How about 5933s (shorty 807s). I've never built a 10 m rig, but I've been feeling a bit of an itch lately.

73,
Mike, KK6GM

> Save your $$$$$ go to www.arrl.org for FREE TESTS ONLINE

Our software prides itself on being incredibly TIME efficient. We offer multiple testing modes, a slick interface, and a lot
of customizability. While it varies from person to person, it's not a stretch to conclude that you'd save about 6 or more
hours studying for a given test by using our software than by using the web-based tools. Isn't your time worth more than $5
an hour? And if you take more than one test (remember--our software comes with lifetime free upgrades)--isn't your time worth

more than $2.50 / $1.80 / $1.25 .. an hour?

Our software is very reasonably priced, and has exceptional feedback from its users who value their time. We sell a great
product at a very nice price. While we mean no disrespect to our friends at ARRL, remember: you can also save "$$$$$" on
rock salt for when it snows by taking those packets home from McDonalds... :)

cheers,

Adrian

I'll chime in on this one and say that I thought the software was very good. I had used some of the online tests, but I found that they were not a time efficient. I also found the software to be very versatile so that I could do a lot more custom things with it which I think helped me a great deal.

And no I don't work for them, and no they did not ask me to post this. I just thought I would toss in my 2 cents worth because I was pleased with the software.

Subject: FS: Millen 1KW antenna tuner/ HRO5s /tubes

Still have the Millen antenna tuner / with the meter and copperclad chassis.
Front panel needs some touchup but in decent shape. Also have the manual too.
$125 plus shipping.
Have 3 HRO 5s for sale-all very good w/ full sets of coils in the storage boxes
and manuals. Recent active estate so gear was kept up.The receivers are
consigned by estate to Dick-K1RAW and myself.. 2 have s meters and 1 is a
Navy version with no s meter and rack panel front. Have 1 Dog house ps, 1
double power supply, and 1 homebrew supply. There is I believe some spare tubes
as well and maybe a few sets antique headfones. I just brought these here a few
days ago. At the moment we are taking offers. We don't use E bay and dont want
to start-HI!!!
Lastly- there are a goodly amount of either new and or good tested tubes. Many
Taylor types etc. I will try get list this week. May sell the whole lot very
reasonable. I will repost inre. Thanks all and 73s Lew-KlNDV
Oh 1 more thing-there are 2 home brew on wood antique transmitters and ps with
the 1934 design (qst) documents.

From: Jeff Goodspeed
Subject: I need a name

Greetings BA Aficionados:

I need a name to identify my radio buying/using tendencies (like you associate with the name "Boat Anchors").

A few decades ago, I started out in Ham radio as an under funded teenager. I sought whatever radio gear I could gather that would provide me with the most functionality I could achieve within my scarce budget. At that time, it meant that I ended up with a rich litany of Boat Anchor gear. I would only hold onto one radio long enough until I could accumulate additional cash, coupled with the selling of my current BA, to move up to a more capable BA. At that time, there were no romantic collectors' pressures on the commerce of older radios. Mostly, older hams were glad to off load these space wasters on the young punks. I learned a lot from repairing and modifying these rigs and I did not feel any pressure to maintain the rigs pristine virgin status. At that time, these rigs had no collector's value.

Fast forward through time, add a spare tire and some gray hair, and I find myself with much the same attitude toward radios. I still get a kick out of buying someone's used radio, cast off in favor of the latest Japanese bell-n-whistle box. I love to pick up a broken radio ' dirt-cheap, drop $30 worth of parts into it and have it radiating into the ionosphere once again. It would be even more satisfying if I could hand it off to an under funded neighborhood teenager, but I digress.

I don't feel comfortable amongst the BA crowd. Don't get me wrong, I love the warm glow of hollow state technology (though I'm not obsessed by it) and have a lot of fond memories of placing my fingers on and in these old beauties. I like radios where you need to rock the band switches and twittle the knobs. But they have become priced out of my comfort range (I call it, being a cheapskate thank-you). I feel a

social obligation not to violate a Boat Anchors original condition by keeping my fingers out of it (half the fun if you ask me). I�m just the kind of guy who would homebrew an IC Xtal calibrator and shoe horn it into a BA (screams of horror!!) instead of spending months hunting down the original tube calibrator option and paying big $$$ for it.

So I�m steering clear of the BA world. But there are still opportunities out there if only I could place a name on them. There is a genre of forgotten rigs which fall in between the BA era and the current uP appliances. Many of these rigs were solid state/vacuum tube hybrids with little or no digital components. I think most hams refer to these old radios as "Backup rigs". A backup rig is an old radio, sitting on your storage shelf that's lost its re-sale value. It just isn't worth the bother trying to get rid of it.

I don't think anyone would label it a "hate crime" if I were to stick my fingers into one of these radios to tinker and modify. Would anybody really care if I were to drill a hole into the front panel of a TS-520 to add a switch? Not many anyway.

So give me a name for these radios. If you make the name sound fun and catchy, then maybe other nar-do-wells like me might leave your pristine BA's alone and move on to our new stomping grounds.

73's - Jeff - KA9S

P.S"As a matter of personnel taste, I think radios should be as large as possible. They should have dials, not digits, and have lots of knobs that are large enough to wrap one's fat fingers around. You shouldn't have to squint to read the labeling on a radio. One knob should have one function. To heck with tiered, multi-function menu systems. They should emit a faint hum that jumps and undulates as you transmit. And if the dial lights dim a little at the same time " well, that's OK to. A real radio would completely occupy your peripheral vision and let you know that your are working with something really impressive.

Just because a string of gasoline shortages has forced us to drive ever diminishing automobiles is no reason to compress the size of radios we place in our houses. Big is beautiful baby!

I like "boat anchors" too...always have always will. My early experience with this hobby were pretty close to yours. Therefore i have to name em Cool!! Radios should be tough, there was a guy in another group that dropped the corner of a newer radio about 4 inches and grenaded the filaments on the panel lamps. You could drop a BC-384 four FEET and dust it off and it would work just fine.

When my XYL noticed the copper pipe loop antenna on top of my truck's camper shell she called me "Eccentric". Or my 75 meter dipole growing like a bean stalk out of her garden. I think that she has actually grown to see my gray BC-779 and B&W 5100 as somewhat artistic. Maybe if you stretch it a bit we're kind of the artisans of the day. Forming our artistic statements out of the discards of a bygone era. Not one of them running a "Program". Not one could be called "Intelligent". Paperweights each and every one.

Subject: I need a name

Greetings BA Aficionados:

I need a name to identify my radio buying/using tendencies (like you associate with the name &#65533;Boat Anchors&#65533;).

A few decades ago, I started out in Ham radio as an under funded teenager. I sought whatever radio gear I could gather that would provide me with the most functionality I could achieve within my scarce budget. At that time, it meant that I ended up with a rich litany of Boat Anchor gear. I would only hold onto one radio long enough until I could accumulate additional cash, coupled with the selling of my current BA, to move up to a more capable BA. At that time, there were no romantic collectors' pressures on the commerce of older radios. Mostly, older hams were glad to off load these space wasters on the young punks. I learned a lot from repairing and modifying these rigs and I did not feel any pressure to maintain the rigs pristine virgin status. At that time, these rigs had no collector's value.

Fast forward through time, add a spare tire and some gray hair, and I find myself with much the same attitude toward radios. I still get a kick out of buying someone's used radio, cast off in favor of the latest Japanese bell-n-whistle box. I love to pick up a broken radio ' dirt-cheap, drop $30 worth of parts into it and have it radiating into the ionosphere once again. It would be even more satisfying if I could hand it off to an under funded neighborhood teenager, but I digress.

I don't feel comfortable amongst the BA crowd. Don't get me wrong, I love the warm glow of hollow state technology (though I'm not obsessed by it) and have a lot of fond memories of placing my fingers on and in these old beauties. I like radios where you need to rock the band switches and twittle the knobs. But they have become priced out of my comfort range (I call it, being a cheapskate thank-you). I feel a social obligation not to violate a Boat Anchors original condition by keeping my fingers out of it (half the fun if you ask me). I'm just the kind of guy who would homebrew an IC Xtal calibrator and shoe horn it into a BA (screams of horror!!) instead of spending months hunting down the original tube calibrator option and paying big $$$ for it.

Nah. Jeff you are really a 'Boat Anchorer' at heart I suspect.

Drop the tough/practiacl exterior and get nostalgic like the rest of us!
.
I recently dragged a 90 pound, 60 year old monster back from the UK, getting it under the 70 pound limit for check in baggage by partiallly dismantling it on somebody's dining room table, carrying the power supply portion in my hand luggage, the tubes in my briefcase and secreting various bits in other luggage. Why? Cos I had one of those when I was a late teenager some 50 years ago! Call me sentimental, OK? Works too!

You may have a point; but in 30 years time someone will be saying I wonder why grandad .....looks like it's been "Jeffed up"!

All the best. Terry S.

JB:

I bought a 51J-4 at a surplus yard about 15 years ago for $20.00. It was sitting on a pile of junk and didn't look too good. It had been stripped of its filters before being discarded, and the slug rack was out of mechanical alignment. It was a relatively easy job to fix the slug rack, but filters were another problem.

I found a 9 kc Collins filter at a flea market with the right center freq (500 kc) and correct pin spacing, and although it was not meant for the 51J-4, it works beautifully. 9 kc gives great audio on AM. I got the filter for $5. Clearly these were the days before the Collins collectors got into a feeding frenzy and drove the prices to their present levels.

For a SSB filter I am using one salvaged from a Collins 618-T. It is a round cylinder with solder lugs, so I had to make a carrier for it out of circuit board material, with the proper pin spacing. The pins on the 51J-4 filter are the same as on HC-6U crystals, so you can make connectors from defunct crystals, or sacrifice some useless crystals for a better purpose.

The 618-T used different circuit capacitance to resonate with the mechanical filter's transducer coils, compared to the 51J, so I had to add some parallel inductance across the filter terminals to optimize the filter performance.

Hope these ideas help.

By the way, I still have some of the 618-T filters, but only in the SSB bandwidth. I haven't yet found a CW bandwidth filter, but perhaps someday I will find one.

Subject: Paper capacitor question

I just got finished re-capping (100%) a DOA Hammarlund HQ-120.
Virtually all the caps (Corny-Dub. "Tiger" brand) were leaking and most were unmeasurable, capacitance-wise. Its working just fine now.

Question is, I also have an SX-28 ('42) that still has all the original
Sprague caps in it and it works perfectly (not that some of the caps
aren't a bit long of tooth). Are these "tigers" akin to the
black-beauties in the reliability arena? Thanks for any insight.

Larry,

Dittos all around. Couldn't have said it better as to why this
newsgroup has seen better days....

Yah mean you can see the scratches and dents along with the rust and smell
the cigarette smoke up close and personal
<LOL>

Where or where is my old KWS-1/75A4 combination. It was big, noisy and
I didn't have to turn on the heat when it was running.
It also took darn near a year before it quit smelling like an ash tray.
Either that, or my sinuses were shot.

I could run both my current rigs plus the Henry and it still wouldn't get
that warm. <:-))

But just wait. by some time this winter I plan on having seperate stations
for HF, VHF, and UHF all capable of the legal limit...Unfortunately I think
the legal limit on 450 here in Michigan is still 50 watts.

Only one more section to go on the Rohn 45 and it'll be up. Then I start
with the antennas.

844. What is it?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-20 00:55:57 UTC
From: Roger Halstead <rdhalste@tm.net>
Message-ID: <x0Gn5.2086$kM2.255336@newshog.newsread.com>
Source record: 62521

On many old steel radio chassis there is a gold coating.
The military stuff had a fungicide that looked similar, but was much
thicker. This stuff looks more like anodizing, but it's on steel.

Any one know what it is and where it can be found.

Check out ten-tec for the capacitors, there 40 to 500 pF and rated at
3.5 Kv. These are the same capacitors they use in there high power
amplifers and legal limit antenna tuner. The cost for the kit is $39.00
each. the kit information is http://www.tentec.com/tkit.htm Kit no
1207. You can buy two for your tuner and it will work just fine.

Sent via Deja.com http://www.deja.com/
Before you buy.

Source record: 62531

You're right about the absurdly high prices on E-Bay, but there is no such thing as a "book price" on used ham radio equipment. it's worth as much as at least one buyer is willing to pay. I may think it's foolish for somebody to pay $400 for a Viking Ranger, but I guess some people get caught up in the excitement of an auction--even one on line--and go overboard on what they're willing to spend. Also, there's a lot of spare cash around these days.

From: "KGL-900"
Subject: Astor Stereogram

Does anyone know of the following StereoGram:

Make: Astor
Model: Unknown (Possibly G18AA)
Made: 1968

The problem:

No ouput, from any of the inputs (gram, din, tv, radio)
(Although there is noise (like pink noise) coming from the left channel
amp)

The right channel amp is not producing anything.

I have been through and re-soldered all the joints, still no luck.
Does anyone have any idea what they fault may be?

Thanks;
Stew

Subject: BA Parts and Tubes - 8/20/00 List

I have the following parts for sale. Too much stuff, not enough basement. Shipping (from 19087) is not included. Prices shown are asking prices for single units - let's make a deal! Big discounts on quantity purchases. Shipping weights are estimates - you pay only actual shipping charges.

Power Transformers (all have 117 V 50-60 Hz primary)

Stancor PC-8417 power transformers (Have 2). Upright mounting style (no big chassis hole to cut). Secondaries: 440 VCT @ 50 mA HV, 25.2 V @ 0.5 A heater #1, 6.3 V @ 0.6 A heater #2. Mounting centers 2 X 1-9/16 inches. NOS, in the original boxes, absolutely MINT condition. Will test if desired. What makes these transformers special is that they are just right for building a power supply for an unmodified "Command set" (ARC-5/SCR-274N) receiver. Heater winding #1 is just right for the heaters of an unmodified Command set receiver, and heater winding #2 is just right for a 6X5 or 6X4 rectifier. Using one of those rectifier tubes and a capacitor input filter, the DC output voltage should be about 220 volts at 50 mA. Of course they can be used for other purposes, but the ratings are a perfect match for a Command set receiver. Price $10 each or both for $18. (4 lbs. each) Will include 6X4 or 6X5 rectifier tube and socket (your choice, no charge) if you need them..

UTC R-7 power transformer. Horizontal, "hole in the chassis" style with terminals. Secondaries: 700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 3 A rectifier filament, 2.5 V @ 8 A heater #1, 6.3/2.5 VCT @ 2A heater #2 (tapped so both voltages can be used). Used, dusty and a paint is scratched up, fair-to-good condition. Tested, works. Price $4 (5 lbs.)

Variable Transformers

Superior Electric "Powerstat" variable autotransformer (similar to a Variac). Model 116-U. Input is 115V, output can be connected for 0-115V or 0-135V, continuously variable. Rated 7.5 A output. Open type, panel mounting with 3/8" shaft, no scale provided. Can be connected for CW or CCW rotation, instructions on terminal board cover. Used, tested, works, good condition. Price $25 (10 lbs.)

Filter Chokes

Stancor RC-8300 filter choke. Upright mounting style, potted in drawn metal case. 8 Henries @ 300 mA DC. 60 ohms DC resistance. Insulation test 3500 V. Used, good to very good condition. Tested with VOM. Price $20 (15 lbs.)

Stancor C-2686 filter chokes. (Have 2). Upright open frame type. 25 millihenries @ 4A DC. .425 ohms DC resistance. Insulation test 1500 V. NOS in original box, dusty but unused. Tested with VOM. Price $3 (5 lbs.)

Stancor C-2688 filter choke. Upright open frame type. 10 millihenries @ 12.5A DC. .11 ohms DC resistance. Insulation test 1500 V. NOS in original box, dusty but unused. Tested with VOM. Price $3 (5 lbs.)

Meters

Meter from military I-166 multimeter. Round black bakelite case, white face with scales. 0-100 uA movement. Labeled "calibrated for use in steel panels". Price $5 (1 lb)

Tubes

V-70-D/812H Transmitting Tubes (have 2) - Made by United Electronics. These are a "super" 812 - 85 watts plate dissipation, ceramic/metal base and plate cap, tubular hard glass envelope, graphite anode. Test GOOD on Hickock 6000A tester. In original plain white boxes. Not sure if these are new or used, but look and test good. Price $22 for the pair. (3 lbs).

Receiving tubes - NOS ones are in original boxes. All used tubes tested and good on Hickok 6000A tester. NOS tested at your request. Listed by type, condition, quantity, brand, price each, special notes.

5U4G, NOS, 1, JAN, $2
6AQ7GT, used, 1, Tung-Sol, $0.50 (in Tung Sol box)
6AU5GT, NOS, 5, Sylvania, $1.50 ("disc" base)
6AV5GA, NOS, 1, GE, $1.50
6B8/VT-93, NOS, 3, JAN, $2
6B8G, used, 1, RCA, $1
6BL7GTA, NOS, 1, GE, $1
6BX7GT, NOS, 1, Rad-Tel, $1 (in "Standard Brands" box)
6CD6GA, used, 2,GE, $1
6G6G, NOS, 1, Sylvania, $1.50 (box is dirty but tube is NOS)
6L6, used, 1, RCA, $2 (looks really good, tests like new, but has broken key and no box)
6SA7, NOS, 1, Philco, $2 (in purple and yellow Philco box)
6SA7GT, NOS, 1, RCA, $1.50, (in plain military box)
6SQ7, NOS, 2, Hytron, $1.50
6SQ7GT, NOS, 6, Raytheon, $1.50
6V6Y, NOS, 1, RCA, $2, (Metal tube with low-loss micanol base for RF use)
6080, NOS, 1, RCA $1.50, (in plain white box)
6080, used, 1, RCA, $0.50
6080, used, 1, GE, $0.50

Note: The above is just a small sample of the tubes available. Please email your needs - I may have what you need.

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for antique-style power supply on wooden chassis. Rated 10 A @ 250 V.

Round white ceramic base with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the base. 2-1/2" round, DPST with double-break contacts. NOS, excellent condition. Price $2 (1 lb).

Octal Wafer Sockets - Brown phenolic. Have 9 NOS, VGC, 1-5/16 mounting centers, 25 cents each. Also 3 used, GC, 1-1/2" mouning centers, one with pin 6 missing, 10 cents each or free with any order. $2 for all 12. (1 lb.)

160 Meter Wave Trap - J.W.Miller Type 811-A. This is a parallel tuned circuit consisting of a pi-wound inductor that is mounted on a mica compression trimmer. Put in antenna lead of AM radio to eliminate BCI from nearby ham stations. NOS in original box. 25 cents (1 lb)

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA. Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3. Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown bakelite case with meter. Old, beat up, cracked and glued case, some parts missing - a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good. Free for the postage. (2 lbs)

Code Practice Oscillator Module. CPO-4 made by Carl Conover & Co. Mineola, NY. Classic unit from the early '60s - "All American Made!" Consists of a small circuit board with two transistors, one resistor and one capacitor, to be hooked up to a soeaker, key and 1-1/2 volt battery. NOS, still in original plastic bag. Looks like something you'd find at Lafayette Radio in 1962. Price 10 cents or free with any order. (1 lb)

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

8/20/00

Subject: CONSUMER ALERT - Beware of Eucalypt Software - Makers of Autopost & Rocketfuel!!!

Eucalypt Software - Makers of Autopost & Rocketfuel --- Ripped Me Off!!!
-
All potential buyers should be warned to steer clear of this company. They have a repeated pattern
of ripping people off and ignoring requests for support.
-
I know someone who sent in the $10 registration fee for Autopost TWICE (thinking the first one may
have gotten lost) and in both instances, never got a registered version of the program and all of his
emails were completely ignored.
-
I myself purchased Rocketfuel on-line and had to pull teeth to get an unlock code. The web

site was very
quick to take my money, but no registration/unlock code came for days and days. I repeatedly emailed them,
only to receive nothing but autoresponses. After 5 days I sent them a message stating that if I did not have
a working version of the program by the close of business that day, that I would challenge the credit card
charge. Magically, the code arrived several hours later.
-
What kind of way to do business is that?
-
In any case, its academic... there are other products available for free that do virtually the same thing
and I only wish that I had known about them before I wasted my time with Eucalypt Software.
-
If your in need of automatic news posting software, there is nothing better than "NNTP Power Post 2000".
It's graciously been made available free from the following web site:
-
http://net-toys.8k.com/
-
Save your money... your time... and the aggravation!
-
Peace,
-
PPN
-
-
PS: I have no affiliation with the makers of PowerPost 2000.

Subject: e-bay prices

Duh. If you don't like the prices at that e-boutique, don't shop there :-)

Minutes after I arrived at the Seattle swap meet this morning, I passed by a lady with a gorgeous Hallicrafters SX-28 with matching speaker in the back of her truck. She had already sold the pair to the first asker for $200 -- a bargain in my book. I wept silently, then passed on :-)

Now, as always, the best deals go to those who do the legwork. Some lucky guy got there before me. No problem -- there's another good deal around the corner, in my experience.

If your idea of legwork is sitting in your Barcalounger tapping on your laptop, then you can count on paying a premium for that convenience. No problem -- just consider it your e-tax.

Cheers.

Phil

From: David Ausley
Subject: FS: Heathkit HW-101, PS, Spkr

This was posted a few weeks back and we thought the rig was sold but the proposed buyer never came through so here it is again.....

A friend of mine asked me to help sell his HW-101, Manual, Matching speaker, Matching AC supply, and Turner "Plus 3" desk mic. No Mods. The rig has been in storage for years and looks great! A couple of small scratches on the top cover,
other than that, it looks brand new. Haven't tried it on transmit, but receive works ok with exception of some noisy pots and wafer switches. Great for collector wanting one that would be easily restored to mint condx. Asking $200 + shipping.

Email offers to: dausley@hiwaay.net

Subject: FS: Millen 1KW antenna tuner/ HRO5s /tubes

Still have the Millen antenna tuner / with the meter and copperclad chassis. Front panel needs some touchup but in decent shape. Also have the manual too. $125 plus shipping.
Have 3 HRO 5s for sale-all very good w/ full sets of coils in the storage boxes and manuals. Recent active estate so gear was kept up.The receivers are consigned by estate to Dick-K1RAW and myself.. 2 have s meters and 1 is a Navy version with no s meter and rack panel front. Have 1 Dog house ps, 1 double power supply, and 1 homebrew supply. There is I believe some spare tubes as well and maybe a few sets antique headfones. I just brought these here a few days ago. At the moment we are taking offers. We don't use E bay and dont want to start-HI!!!
Lastly- there are a goodly amount of either new and or good tested tubes. Many Taylor types etc. I will try get list this week. May sell the whole lot very reasonable. I will repost inre. Thanks all and 73s Lew-KlNDV

Oh 1 more thing-there are 2 home brew on wood antique transmitters and ps with the 1934 design (qst) documents.

From: w4pqwhs@aol.com (W4pqw HS)
Subject: Switch Question

The switch you mention is (automatic volume control) and(manual volume control).. you may find that cw signals are more easily controlled in mvc position, broadcast and other am will be fine on avc setting.. may be Kenwood is a spin off from Lafayette , I heard about Lafayette long beforeI heard of Kenwood.. have fun Harold W4PQW

Date: Sat, 12 Aug 2000 20:35:35 -0700
From: no@sp.am
Subject: Switch Question

MVC = Manual Volume Control
AVC = Automatic Volume Control

For voice/music, etc. AVC is probably best. It will tend to keep the gain of the receiver such that the signal will remain fairly constant with fading, etc. You can usually run the RF gain control up full and adjust the volume by using the AF gain control for comfortable volume if you have the AVC on.

For CW (code) or for SSB the usual process is to use MVC and turn the AF gain 1/2 to 3/4 of the way up (or more) depending on how much hum is produced and start with the RF gain all the way down and advance it until you can hear the signal you're trying to tune in. Of course for both CW and SSB you need to have the BFO (Beat Frequency Oscillator) turned on and adjust its pitch while you rock the tuning back and forth to give the strongest signal and a pleasant tone on CW and to make the voice as clear as you can on SSB. Using MVC you provide the gain control by riding the RF gain control. Once you've decided where you want the AF gain control, make adjustments in how loud the signal is by adjusting the RF gain and keeping the signal low enough so that it's not distorted.

If you try to read CW or SSB with the AVC on, since you must have the BFO on to introduce a beat signal for CW or to reinsert the missing carrier on SSB, the BFO signal will cause the AVC to decrease sensitivity to the point where you usually won't be able to hear the desired signal. More modern receivers will have a product detector which can operate with the RF gain full on on both CW and SSB.

No, Lafayette was a private label of (guess what?) Lafayette Radio and may have had Trio-Kenwood produce something for them but Kenwood is definitely NOT a derivative of Lafayette. Lafayette did not design and produce gear but put their label on other company's products.

Subject: Time for a R-390 Postsge Stamp?

I recently found this on E-Bay; apparently certain cash-hungry governments (including our own) will put just about ANYTHING on a postage stamp if it'll bring in cash (Disney characters, Daffy Duck, movie stars, etc, etc). So this might not be as hard as it first seems!

Turkemenistan even had Kim Basinger on a SERIES of stamps (not just one) (see Ebay
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=409392676).

Maybe we could convince somebody to honor the R-389, R-390, R-390A, R-391 and R-392 in a similar series; I suspect that in terms of long-term significance that these boat anchors outweigh Kim in importance (pun intended).
Any suggestions of other radios?
Maybe we should team up with the HCA and get a stamp for the SX-88; or how about the GPR-90?

Subject: Want: Pictures of Console Radio Cabinets

If anybody knows of a good site to get some images of classic old
console radios from the 30's through early 50's, I would be very
grateful for a referal to the URL, or, if you've got some images, can
you email them? Please reply to: cpa@kcnet.com

Thanks

Although I have not seen this Roger, it could be irriditing- believe
this leaves a gold finish on steel.

Subject: WTB AMPHENOL MIC CONNECTORS

Hello Ralph,

Mouser does not list them but I think Newark does. Look
under Wire Pro as the manufacturer. They should run
around $8 each.

BTW, I always look at the el cheapo mikes at a hamfest
because you sometimes can buy a mike for a dollar or so
with this connector on it.

good luck & 73,
Phil

My bare junk box didn't reveal a needed small power transformer for a 30s receiver: Ideally, it would be around 250-0-250 ct @ 50 or more mils, 6.3v @ 2a and 5v @2 amps. Sticker shock socked me when I priced these jewels in a catalog. Anybody got a usable one to sell?

Subject: BADASS!

I just found the coolest site on the web that I want you to check out. It's called
Soundom.net and it's a company that pays us do what we are already doing: listening to
music! Thats right, Soundom PAYS US for listening to our MP3s, CDs or Internet Radio. All
we have to do is download the Soundom Application or the Plugin to Winamp, Windows Media,
or Sonique (others are on the way). And they pay in US DOLLARS that we can spend anywhere,
not vouchers or some other internet currency. Best of all, you can ear
n additional money by referring people to sign up for Soundom!

Just when you think it could not get better, it does. Soundom also pays the artists every
time we play them, just like a radio station would. So we're supporting our favorite
artists just by playing their music.

Soundom is launching the program later this summer, and is going to be rolling out on a
first come, first served basis. So check it out at http://www.Soundom.net

Subject: Decade counting tubes / Dekatrons

While this is only tangentially related to Radio's, I suspect there will never be a Dekatron newsgroup!

For some strange reason I've become fascinated with Dekatrons and other counting tubes - I'm looking for some more to play with, and would like to purchase or swap for any of them, including:

7 pin miniature: 7155, 6879
Octal: GC10B, 6802, 6909, Z303C
12/13 pin: GS10C, 6476/A, 6910, Z502S, 7978

Also spec sheets/literature would be very welcome.

I wouldn't mind a few inexpensive nixie tubes as well.

I have a good assortment of more "conventional" tubes to swap etc.

My first Decatron construction is below:

http://www.the-planet.org/dekatrn.jpg

Many thanks,

- Gary

Subject: FS: APS-104 radar modulator

FS: mil surplus modulator unit from APS-104 search radar (likely from
B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron
(in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers
and a few smaller tubes, oil caps, relays, transformers and other parts
all in airtight aluminum canister. Also have copy of service manual
(extra $5 for all, n/c for just the basic schematic & info). Still in
original box, but used, collector's item, $55 (prefer pick up - box
exceeds UPS size limit).(For an additional $20, I can shave down the

foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. Email or call 334-347-5281 day/eve/wknd.

Perhaps I'm paranoid, but does the fact that the face has RADIUM on it bother anyone else? From the description, it sounded like it is the kind where you open the face to wind it, thus exposing the radium (or what's left of it) to the environment. The meters on the R390As were removed by the government for just that reason - and they were in sealed housings.

> Even AA5s have better audio.

Amazing isn't it? This is one thing that Hallicrafters did well most of
the time. A nice pair of 6V6's or 6F6's in push-pull for the audio!
Volume (today manufacturers brag about anything more than about a watt.
One watt!) and rich, warm, clear, tone. I think it had a lot to do with
the marketing philosophies of the two companies. Collins was a military
contractor, and good audio just doesn't seem to be much of a concern for
battlefield comms, though I don't know why, since good audio means
intelligibility, plus it helps the poor soldier that has to sit by the
rig 14 hours a day do his job better. Hallicrafters on the other hand
sold to civilians mainly, and far more SWL radios than Ham. Hams can
tolerate all sorts of noise. We have to. Such are the perils of HF at
the power levels we may use. SWL's are pickier, even the real DXers.
When the signal you are tuning beams at you from antenna arrays that
cover acres, and which radiate RF in the 100's of kilowatts in many
cases, you get used to signal quality that would seem overkill to a ham.
Ham HF is to SWL HF what AM is to FM where the music lover is concerned.

> ...and the SP-600 also takes the cake for "most impossible to repair" radio.

Harder than an R-390?

From: Will
Subject: Hallicrafters Haters Association (more on audio old and new)

As with so many things, that depends largely on what you are using it for, and what you value in terms of functionality and performance. For CW and AM SWL, even DX, the SX-100 (and other high-end Hallies) is still a mighty fine working radio. No one likes seperate receivers and transmitters anymore (does anyone make such beasts?!), but if you are like me and don't contest, don't do mobile HF, have fun DXing but don't take it too seriously (16 countries and 31 states in 3 years of hamming, woohoo!), and don't have skatey-eight "favorite" frequencies that you have to have entered into memories, then an SX-100 or a Drake B-line is more than enough radio. And on one score, especially near a solar maximum, boatanchors exceed their modern SS rivals: audio. On both TX and RX, code and phone, I can listen longer with less fatigue to a tube rig than a solid-state. Hour long QSOs and BBC dramas are plain tiring on the new stuff. Even with the best outboard speakers or headphones, I can listen that long, but sure don't want to.

Not that KenYaeCom *couldn't design comparable solid-state audio stages (though thermionic audio has a sound, actually a form of mild distortion, that I love and crave), they can. It is just that somehow audio has been de-valued in the radio design engineering world, expecially HF, in the last 20 years. I don't know why this is, but on all scores, all makes, all models, with a few exceptions like Drake, Grundig, and possibly Ten-Tec, just sound yukky. Small speakers, low output, crappy stock electret condensor microphones, and little attention to AF circuit design all around.

Again, this mystifies me, insofar as there have been absolutely tremendous advances in performance in almost all other regards, and inasmuch as good audio circuits are easy and cheap to design and build compared to RF and IF and DSP circuits. Somehow, the idea has gotten around that you don't *need* good audio in a communications receiver or HF transceiver, at either end. The first thing any good ricebox needs out of the package is an outboard speaker and a replacement for that

microphone that has the same element as a $30 handheld cassette tape
recorder. Why don't they get it?

From: "Mark Bell"
Subject: HT-32 Help Needed

Folks --

I'm in the process of restoring my HT-32 Mk 1 transmitter, and need some
technical assistance.

My problem is low power on 80, 40, 15, and 10 meters. 20 Meters is fine
with output around 80W or so. The other bands are around 35 to 40 W.

While trouble shooting this problem, I ran across something interesting that
may or may not be contributing to this problem. It's the level of the 9 Mhz
carrier oscillator signal. (If I'm getting 80W out on 20, but only 35 to 40
on the other bands, I tend to think the carrier osc isn't the problem as
it's band independent....but.....).

The following measurements were made with my homebrew RF probe (from the
ARRL handbook) and a Heathkit IM-11 VTVM.

On the HT-32, I removed tubes V6 (Het Osc) and V7 (2nd Mixer). I then
measured the carrier osc signal on pin 1 of V7. The reading was between 0
and 0.08 volts as the RF Level control was turned. This voltage variation
occurred with the RF Level set between 6.5 and 10 (which itself seems
strange -- I expected full control range).

As a sanity check, I did the same test on my HT-37, which works fine. The
reading on pin 1 of V7 (1st mixer) was between 0 and 0.35 volts, pretty much
across the full range of the RF Level control. This is in the ballpark of
what I expected on the HT-32.

Are my readings for the HT-32 correct? Any comments on the RF Level control
being only effective between settings 6.5 and 10?

Thanks

Mark K3ZX
Airville PA.

Subject: Need Ceramic Switch

I have been looking around and the part that I need is difficult to find. I am building a link-coupled antenna tuner from the 1984 ARRL handbook.
I need a 3 pole, 5 position ceramic switch to complete the project.

Surplus sales has one, but it costs a fortune. Anyone on here know of where I can find an alternative please email me.

A single 807 gives me 25-30watts out in my old Knight-kit T-50. That is class C. According to the 1968 handbook, with a pair of 807s in AB2, 750v on the plate and 300 on the screen you would get about 120 output. I don't have a schematic. Pick up a old handbook. I'm sure youcan find something there. Also be aware that a 1625 is the same tube except for the filament.

From: stephanie shanblatt
Subject: Speed-x bug value?

I just acquired a Speed-X bug model 515. The box and the key say Les Logan, Co, San Francisco, so I assume this is before EF Johnson bought out Speed-X. The bug is virtually unused, in the original box with the original instruction sheet dated September 15, 1941.

I would like to sell it, but before I do so blindly, I wonder if someone might help me ascertain its value. Any help or leads would be appreciated.

tnx

From: "Lamb"
Subject: Speed-x bug value?

Hi Mike:

I am not an expert, but I do have about 10 bugs. The bug you have is not real common, although not uncommon. Because it is virtually new, it probably will bring a premium.

I would guess one in good condition would bring $100. However, because they do not make them anymore, and because all you need is one collector who is willing to pay extra for one in that condition, it may be worth at least a few hundred dollars. So, expect $100 and be pleased if you get $200. It should bring joy to someone.

good luck, Colin K7FM

I have one of those critters. Anyone know where one can get it
properly serviced? It tends to stick after a couple of years of use.
All I get around here are dumb looks at it.

I would prefer one of the real U.S /MM clocks or Naval clocks anytime.
But, it must have the proper silent periods marked.

Oh, well. The Russian thing looks nice, though.....

<<
> You're right about the absurdly high prices on E-Bay, but there is no such
> thing as a "book price" on used ham radio equipment.

> W3DEF >>

True, but there IS an "informal price range" for used items, and eBay has shifted this into the stratosphere. For instance, how much is a Johnson KW Matchbox worth on the used market? $100? $175? $250? $450? $1000? Because of eBay's effect on the market, no one knows the answer anymore.

If a buyer wants to pay the eBay sellers price, that's their business. But what happens on eBay has an influence on non-eBay trading. I have heard sellers at swap meets apologize for the high prices on their equipment, saying "they're selling at that price on eBay, you know".

I need to free some space in the shack. Anything left in a couple of weeks goes on eBay.

1. Drake R-4A receiver with MS-4 speaker. Very good condition cosmetically and electrically. Includes photocopy manual. $200 plus shipping.

2. Hitachi V-422 40-MHz dual-trace oscilloscope with two probes and original manual. Excellent condition, about 60 hours of use. $180 plus shipping.

3. Kenwood SM-220 monitor with BS-8 panadapter. Very good condition electrically and cosmetically, with original manual. $325 plus shipping.

4. Kenwood TS-830S (gold label) with VFO-240 and MC-50 mic. TS-830S and VFO-240 are in very good condition electrically and cosmetically, MC-50 is in very good condition electrically and good condition cosmetically. With original manuals for TS-830S and VFO-240. $575 plus shipping.

If you're interested, please contact me at jkilgore@io.com and kilgore@dev.tivoli.com.

Hi All,

Anybody out there know anything about a TS-1379/U? It is advertised as an ex-Navy 2-32 MHz spectrum analyzer, is a rack mount device, and weighs 75 lbs. Seems like it must be a great boatanchor and if I can get it to work would be perfect for working on old boatanchors. Anyway I will be picking it up in a week or so and am trying to find out what I have found. As always thanks for the collective wisdom.

73, Rob, KD7HRN

882. BA Parts and Tubes - 8/20/00 List

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-21 00:55:44 UTC
From: n2ey@aol.com
Message-ID: <20000820205544.28462.00000206@nso-fa.aol.com>
Source record: 62459

I have the following parts for sale. Too much stuff, not enough basement. Shipping (from 19087) is not included. Prices shown are asking prices for single units - let's make a deal! Big discounts on quantity purchases. Shipping weights are estimates - you pay only actual shipping charges.

Power Transformers (all have 117 V 50-60 Hz primary)

Stancor PC-8417 power transformers (Have 2). Upright mounting style (no big chassis hole to cut). Secondaries: 440 VCT @ 50 mA HV, 25.2 V @ 0.5 A heater #1, 6.3 V @ 0.6 A heater #2. Mounting centers 2 X 1-9/16 inches. NOS, in the original boxes, absolutely MINT condition. Will test if desired. What makes these transformers special is that they are just right for building a power supply for an unmodified "Command set" (ARC-5/SCR-274N) receiver. Heater winding #1 is just right for the heaters of an unmodified Command set receiver, and heater winding #2 is just right for a 6X5 or 6X4 rectifier. Using one of those rectifier tubes and a capacitor input filter, the DC output voltage should be about 220 volts at 50 mA. Of course they can be used for other purposes, but the ratings are a perfect match for a Command set receiver. Price $10 each or both for $18. (4 lbs. each) Will include 6X4 or 6X5 rectifier tube and socket (your choice, no charge) if you need them..

UTC R-7 power transformer. Horizontal, "hole in the chassis" style with terminals. Secondaries: 700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 3 A rectifier filament, 2.5 V @ 8 A heater #1, 6.3/2.5 VCT @ 2A heater #2 (tapped so both voltages can be used). Used, dusty and a paint is scratched up, fair-to-good condition. Tested, works. Price $4 (5 lbs.)

Variable Transformers

Superior Electric "Powerstat" variable autotransformer (similar to a Variac). Model 116-U. Input is 115V, output can be connected for 0-115V or 0-135V, continuously variable. Rated 7.5 A output. Open type, panel mounting with 3/8" shaft, no scale provided. Can be connected for CW or CCW rotation, instructions on terminal board cover. Used, tested, works, good condition. Price $25 (10 lbs.)

Filter Chokes

Stancor RC-8300 filter choke. Upright mounting style, potted in drawn metal case. 8 Henries @ 300 mA DC. 60 ohms DC resistance. Insulation test 3500 V. Used, good to very good condition. Tested with VOM. Price $20 (15 lbs.)

Stancor C-2686 filter chokes. (Have 2). Upright open frame type. 25 millihenries @ 4A DC. .425 ohms DC resistance. Insulation test 1500 V. NOS in original box, dusty but unused. Tested with VOM. Price $3 (5 lbs.)

Stancor C-2688 filter choke. Upright open frame type. 10 millihenries @ 12.5A DC. .11 ohms DC resistance. Insulation test 1500 V. NOS in original box, dusty but unused. Tested with VOM. Price $3 (5 lbs.)

Meters

Meter from military I-166 multimeter. Round black bakelite case, white face with scales. 0-100 uA movement. Labeled "calibrated for use in steel panels". Price $5 (1 lb)

Tubes

V-70-D/812H Transmitting Tubes (have 2) - Made by United Electronics. These are a "super" 812 - 85 watts plate dissipation, ceramic/metal base and plate cap, tubular hard glass envelope, graphite anode. Test GOOD on Hickock 6000A tester. In original plain white boxes. Not sure if these are new or used, but look and test good. Price $22 for the pair. (3 lbs).

Receiving tubes - NOS ones are in original boxes. All used tubes tested and good on Hickok 6000A tester. NOS tested at your request. Listed by type, condition, quantity, brand, price each, special notes.

5U4G, NOS, 1, JAN, $2
6AQ7GT, used, 1, Tung-Sol, $0.50 (in Tung Sol box)
6AU5GT, NOS, 5, Sylvania, $1.50 ("disc" base)
6AV5GA, NOS, 1, GE, $1.50
6B8/VT-93, NOS, 3, JAN, $2
6B8G, used, 1, RCA, $1
6BL7GTA, NOS, 1, GE, $1
6BX7GT, NOS, 1, Rad-Tel, $1 (in "Standard Brands" box)
6CD6GA, used, 2,GE, $1
6G6G, NOS, 1, Sylvania, $1.50 (box is dirty but tube is NOS)
6L6, used, 1, RCA, $2 (looks really good, tests like new, but has broken key and no box)
6SA7, NOS, 1, Philco, $2 (in purple and yellow Philco box)
6SA7GT, NOS, 1, RCA, $1.50, (in plain military box)
6SQ7, NOS, 2, Hytron, $1.50
6SQ7GT, NOS, 6, Raytheon, $1.50
6V6Y, NOS, 1, RCA, $2, (Metal tube with low-loss micanol base for RF use)
6080, NOS, 1, RCA $1.50, (in plain white box)
6080, used, 1, RCA, $0.50
6080, used, 1, GE, $0.50

Note: The above is just a small sample of the tubes available. Please email your needs - I may have what you need.

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for antique-style power supply on wooden chassis. Rated 10 A @ 250 V. Round white ceramic base with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the base. 2-1/2" round, DPST with double-break contacts. NOS, excellent condition. Price $2 (1 lb).

Octal Wafer Sockets - Brown phenolic. Have 9 NOS, VGC, 1-5/16 mounting centers, 25 cents each. Also 3 used, GC, 1-1/2" mouning centers, one with pin 6 missing, 10 cents each or free with any order. $2 for all 12. (1 lb.)

160 Meter Wave Trap - J.W.Miller Type 811-A. This is a parallel tuned circuit consisting of a pi-wound inductor that is mounted on a mica compression trimmer. Put in antenna lead of AM radio to eliminate BCI from nearby ham stations. NOS in original box. 25 cents (1 lb)

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA. Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3. Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown bakelite case with meter. Old, beat up, cracked and glued case, some parts missing - a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good. Free for the postage. (2 lbs)

Code Practice Oscillator Module. CPO-4 made by Carl Conover & Co. Mineola, NY. Classic unit from the early '60s - "All American Made!" Consists of a small circuit board with two transistors, one resistor and one capacitor, to be hooked up to a soeaker, key and 1-1/2 volt battery. NOS, still in original plastic bag. Looks like something you'd find at Lafayette Radio in 1962. Price 10 cents or free with any order. (1 lb)

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

Source record: 62464

Duh. If you don't like the prices at that e-boutique, don't shop there :-)

Minutes after I arrived at the Seattle swap meet this morning, I passed by a lady with a gorgeous Hallicrafters SX-28 with matching speaker in the back of her truck. She had already sold the pair to the first asker for $200 -- a bargain in my book. I wept silently, then passed on :-)

Now, as always, the best deals go to those who do the legwork. Some lucky guy got there before me. No problem -- there's another good deal around the corner, in my experience.

If your idea of legwork is sitting in your Barcalounger tapping on your laptop, then you can count on paying a premium for that convenience. No problem -- just consider it your e-tax.

Cheers.

I'll chime in on this one and say that I thought the software was very good. I had used some of the online tests, but I found that they were not a time efficient. I also found the software to be very versatile so that I could do a lot more custom things with it which I think helped me a great deal.

And no I don't work for them, and no they did not ask me to post this. I just thought I would toss in my 2 cents worth because I was pleased with the software.

Subject: Decade counting tubes / Dekatrons

While this is only tangentially related to Radio's, I suspect there will
never be a Dekatron newsgroup!

For some strange reason I've become fascinated with Dekatrons and other
counting tubes - I'm looking for some more to play with, and would like to
purchase or swap for any of them, including:

7 pin miniature: 7155, 6879
Octal: GC10B, 6802, 6909, Z303C
12/13 pin: GS10C, 6476/A, 6910, Z502S, 7978

Also spec sheets/literature would be very welcome.

I wouldn't mind a few inexpensive nixie tubes as well.

I have a good assortment of more "conventional" tubes to swap etc.

My first Decatron construction is below:

http://www.the-planet.org/dekatrn.jpg

Many thanks,

- Gary

From: "Ron Eisenbrey"
Subject: FS: COLLINS 75A-2

This receiver is in excellent shape. It has been thoroughly cleaned and lubricated. All new electrolytic capacitors have been installed. A new drum dial was installed. Receives broadcast and AM shortwave fine. Sensitivity is low on some bands. This is a late model set, uses 6BA7 mixers and 6CB6 RF amp. Front panel is excellent, no broken or chipped knobs. The cabinet has been touched up with St. James Gray paint. A previous owner has added three RCA type jacks on the rear panel. These can be removed and holes plugged if desired. This is the only modification I can find. This set has a crystal calibrator installed. All internal shields are intact. Included with the set is a Collins color manual and a Sam's photofact folder. Also included are two plug in adaptors on which I have no documentation. I believe them to be product detector adaptors which plug into the internal accessory socket in the receiver. This set is exceptionally clean, guaranteed no dust or crud inside or out. I have .jpeg files available if you would like to see them, just email me. $650. Shipping will be extra and I will insist on double boxing with lots of packing material. I live in the Houston TX area if you

want to pickup or see this receiver.

Thanks,

Ron, AB5WG

FOR SALE : MN-4 Tuner
I purchased this tuner to use with a B line, but found I really don't have the room (or need) for it with my other tuners. It is in nice condition, the front panel and meter is a 9, the case has some light scratches, not bad at all it is a 7 or 8. It works well, hasn't been arc'd or overheated. I will sell for $100 plus shipping. Please email for more info if interested
Thanks

Yes, you are paranoid. By the same token, almost *everyone* who was exposed
to Radium before 1897 is now dead.

As for submarine uses, they would be an ideal survivial vehicle when the
oceans cover the earth or, a rather unique military vehicle collectors item.

Subject: FS Hammarlund HX-50A Transmitter

After much thought I have decided to part with my HX-50A transmitter. The price is high, however this is truly a collector quality rig. It even smells new. Come complete with original carton and manual. Does not have the 160 meter add on. The rig is in excellent condition. The only band I used with it was 20 meters and it operated well on all modes (CW, AM and SSB). There is not a scratch, rub, dent or mark of any kind on this radio. The chassis is equally clean. I am selling because I am not going to set up a Hammarlund station right now and know I will be sorry I let this beauty go.

> Even AA5s have better audio.

Amazing isn't it? This is one thing that Hallicrafters did well most of
the time. A nice pair of 6V6's or 6F6's in push-pull for the audio!
Volume (today manufacturers brag about anything more than about a watt.
One watt!) and rich, warm, clear, tone. I think it had a lot to do with

the marketing philosophies of the two companies. Collins was a military contractor, and good audio just doesn't seem to be much of a concern for battlefield comms, though I don't know why, since good audio means intelligibility, plus it helps the poor soldier that has to sit by the rig 14 hours a day do his job better. Hallicrafters on the other hand sold to civilians mainly, and far more SWL radios than Ham. Hams can tolerate all sorts of noise. We have to. Such are the perils of HF at the power levels we may use. SWL's are pickier, even the real DXers. When the signal you are tuning beams at you from antenna arrays that cover acres, and which radiate RF in the 100's of kilowatts in many cases, you get used to signal quality that would seem overkill to a ham. Ham HF is to SWL HF what AM is to FM where the music lover is concerned.

From: "Mark Bell"
Subject: HT-32 Help Needed

Folks --

I'm in the process of restoring my HT-32 Mk 1 transmitter, and need some technical assistance.

My problem is low power on 80, 40, 15, and 10 meters. 20 Meters is fine with output around 80W or so. The other bands are around 35 to 40 W.

While trouble shooting this problem, I ran across something interesting that may or may not be contributing to this problem. It's the level of the 9 Mhz carrier oscillator signal. (If I'm getting 80W out on 20, but only 35 to 40 on the other bands, I tend to think the carrier osc isn't the problem as it's band independent....but.....).

The following measurements were made with my homebrew RF probe (from the ARRL handbook) and a Heathkit IM-11 VTVM.

On the HT-32, I removed tubes V6 (Het Osc) and V7 (2nd Mixer). I then measured the carrier osc signal on pin 1 of V7. The reading was between 0 and 0.08 volts as the RF Level control was turned. This voltage variation occurred with the RF Level set between 6.5 and 10 (which itself seems strange -- I expected full control range).

As a sanity check, I did the same test on my HT-37, which works fine. The reading on pin 1 of V7 (1st mixer) was between 0 and 0.35 volts, pretty much across the full range of the RF Level control. This is in the ballpark of what I expected on the HT-32.

Are my readings for the HT-32 correct? Any comments on the RF Level control being only effective between settings 6.5 and 10?

Thanks

Mark K3ZX

From: aa5qt@aol.com (AA5QT)
Subject: HT-32 Help Needed

Mark, it may not be relevant, but one of the limitations of the HT32 line is that they do not have loading controls. So, one may obtain different output powers with different antennas and/or loads. You might want to check some of this (I'm assuming you've already checked the internal alignment).

Subject: Speed-x bug value?

Hi Mike:

I am not an expert, but I do have about 10 bugs. The bug you have is not real common, although not uncommon. Because it is virtually new, it probably will bring a premium.

I would guess one in good condition would bring $100. However, because they do not make them anymore, and because all you need is one collector who is willing to pay extra for one in that condition, it may be worth at least a few hundred dollars. So, expect $100 and be pleased if you get $200. It should bring joy to someone.

good luck, Colin K7FM

From: jwodell@ameritech.net (Jerry W. O'Dell)
Subject: What to do with old stuff

Over the years I have collected a whole bunch of old,
real boatanchors. Things like a DX-40, Drake 2B,
many old transceivers, HQ170, and so on.

Quite frankly, I don't see how I can sell those things,
honestly, for more than $100. Most have minor
eccentricities.

But for $100, it simply isn't worth packing them up
and shipping them. So they sit there. Same problem
with giving them away. I'd still have to ship them.

I ask on the local nets for people who would like them
really cheaply, and nuttin. The new hams, of course,
have never heard of tubes, and would kill themselves
on the HV.

I suspect I'm going to through them out! Seems a pity.

> W3DEF >>

True, but there IS an "informal price range" for used items, and eBay has shifted this into the stratosphere. For instance, how much is a Johnson KW Matchbox worth on the used market? $100? $175? $250? $450? $1000? Because of eBay's effect on the market, no one knows the answer anymore.

If a buyer wants to pay the eBay sellers price, that's their business. But what happens on eBay has an influence on non-eBay trading. I have heard sellers at swap meets apologize for the high prices on their equipment, saying "they're selling at that price on eBay, you know".

Whoa....now just a cotton pickin' minute there Hoss....are you actually suggesting that people actually put forth effort to get what they want? Where do you live? On Mars? We *DONT* do that anymore...why, the very thought is unthinkable!!! What are you ? Anti-Barcalounger or something?

Why, just you go and read the "Above 50 Mhz " column in the latest QST. In a few years, we won't even need operators to make DX QSOs any more. Why, just select the "Work 100 Countries" on you optoins list when you leave for your "7 hour work day", and you'll have DXCC when you get back home!! Geeze Phil...get a life.....

From: Bob Weiss <bweiss@carroll.com>
Subject: FS: Pair of 815 Transmitting tubes.

Are you sure you are thinking of the 815? AFAIK, the 815 is a heater/cathode type, not a bright emitter filamentary tube. The 815 is a dual beam power tube, with 2 separate plate caps. Perhaps you are thinking of 811, 813, or 814?

Bob Weiss N2IXK

Subject: FS: radios, scopes

I need to free some space in the shack. Anything left in a couple of weeks goes on eBay.

1. Drake R-4A receiver with MS-4 speaker. Very good condition cosmetically and electrically. Includes photocopy manual. $200 plus shipping.

2. Hitachi V-422 40-MHz dual-trace oscilloscope with two probes and original manual. Excellent condition, about 60 hours of use. $180 plus

shipping.

3. Kenwood SM-220 monitor with BS-8 panadapter. Very good condition electrically and cosmetically, with original manual. $325 plus shipping.

4. Kenwood TS-830S (gold label) with VFO-240 and MC-50 mic. TS-830S and VFO-240 are in very good condition electrically and cosmetically, MC-50 is in very good condition electrically and good condition cosmetically. With original manuals for TS-830S and VFO-240. $575 plus shipping.

If you're interested, please contact me at jkilgore@io.com and kilgore@dev.tivoli.com.

Subject: Heathkit Receiver AR-3

Would anyone have a manual for the Heathkit AR-3 Receiver. I was given one that is in poor but salvageable condition and I'd like to return it to use.

It also has an unoriginal tuning and bandswitch knobs if anyone had spares to sell or trade.

I'd gladly pay for copying/postage or swap for manual copies, parts etc.

Many thanks!

- Gary

I have two RA-6217 radios, working, but both could use realignment. $450 ea.

Also two complete RA-6778 radios which I got new from Racal about a dozen years ago, but not working, then or now. Both power up, but have problems. Near new condition. With all filters and modules. No power cord either. Manuals are available from a MD source at $75 ea . Sold as-is, but complete.

Rare rare rare....RA-153 receiver (dual RA-17 radios with one tuning mechanism). Working. See Fred Osterman's book. Pickup only on Long Island, NY at $650.
Shipping extra on all.

Go to the hardware store and get some bait casting fishing line.

A heavier line than plain nylon....it is also covered with fabric and works as well as any dial cord. I use it all the time....no problems.

The other suggestions are fine. In addition, I bought and use some heavy thread that's used to sew leather. The stuff is the right diameter and is waxed. The wax, rather than being slick, helps grip the part around which its wound. It works just fine. I got quite a large spool of it for less than $2.

From: C-ap@clari.net (AP / RON FOURNIER, AP Political Writer)
Subject: US Senator goes Green!

21 Aug 2000 19:18:48 GMT

It's hard for me to believe that the next president of the United States will be George W. Bush or Al Gore. Both remind me of Hollywood movies that have been focus-grouped to death: they push all the appropriate buttons, but have zero original vision. Both stand for the same thing: corporate-driven business as usual.

There must be some way outta here.

Ralph Nader is no joker or thief. I think he and the Greens could give Al & George a good run for their money. At 65, Nader isn't

running as fast as he used to, and the Green Party doesn't exactly have its platform figured out, but I think they have what it takes to inject a dose of radical democracy into the race. Unlike the two Tweedles, Nader is real, he stands for decency and common sense and he still commands a lot of respect in progressive and activist circles. And hidden behind the rainbow coalition of lefties, eco-feminists and crazies, the Green Party does have some great ideas. It's the only party that stands for the Tobin Tax, true cost markets, media reform and putting corporations in their place.

In October, with a fired-up Nader hurling intelligent sound bites into the presidential debates, the whole game show might actually be worth watching. The alternative is the most sophomoric presidential race in American history . . . and the lowest voter turnout ever.

I'm putting a GO GREEN - VOTE NADER graphic at the end of all my emails from now on. I'm betting that, between now and November, the American people will wake up to the fact that their sacred democratic experiment has now degenerated into a choice between a corporate-sponsored Republican and a corporate-sponsored Democrat.

In these heady post-WTO days, a sudden, massive protest vote against Al & George is entirely possible and Nader would be the most apparent heir. With perhaps less than 25 percent of the people voting, an inspired Nader campaign could grab a surprising share of the action. And even if he does not come close to winning, at least imagine how his campaign might pull together some of the fired-up, post-WTO forces and lay the groundwork for something really visionary in 2004.

Download the graphics and help launch an email pyramid scheme to dump the Tweedles! Two formats are available, a magazine sticker (17K) or a Banner ad (5K):

Sticker ... http://adbusters.org/campaigns/election/sticker.html
Banner .... http://adbusters.org/campaigns/election/banner.html

What it Means to be Green

"At the root of all Green political action is nonviolence, starting
with how we live our lives, taking small, unilateral steps toward
peace in everything we do. Green politics requires us to be both
tender and subversive. Affirming tenderness as a political value is
already subversive. In Green politics, we practice tenderness in
relations with others; in caring for ideas, art, language, and
culture; and in cherishing and protecting the Earth. To think Green
is to build solidarity with those working for social justice and human
rights everywhere, not bound by ideologies."

-Petra Kelly

From: Terry Sanford <tsanford@roadrunner.nf.net>
Subject: Victor Short Wave Adaptor.

Looking for something else I came across a 'short waver converter?

Brown crackle cabinet (top missing), wooden base. Unit is 17 inches
wide, 10 inches deep and 8 inches high. Knobs missing. Overall condition
'fair'; maybe a three or a four on scale of 10.

At first glance it looks like a 1930s radio receiver. I was puzzling
over the make until I noticed the small "His Master's Voice" symbols
moulded into the two, what I will call the 'escutcheons', through which
you view the 'tuning' dials. 0 to 100. Then I found the original label
on the bottom!
"Victor Short Wave Adaptor; Range 16.5 to 110 meters. " and "Victor
Division, RCA Victor Company, Inc. Camden. N.J. U.S.A."

The two cord driven metal tuning dials tuning dials are each coupled to a single gang variable capacitor which are guessed to be 200 pfd. variety with wider spacing than later variable capacitors. One must be 'tuning' and the other 'oscillator'?

Also projecting through the front panel are a rotary on/off switch and a potentiometer which I've just noticed is marked "Feb12 1931 'From Magnetic Phono Cartridge' '4513'." judging by the wiring, what looks resoldered and an incorrect shaft length this may not be an original item? (Idea? Could be a reaction control!) Unless it was modified; see item removed below.

Inside the case there is a metal removable chassis on which there is a black paxolin board riveted to the main chassis mounting five (five pin) sockets. The five sockets are; UY224 (also a top cap wire), ANT (into which a single winding 'ANT' coil marked "23-45 M" {presumably metres?}is plugged, UY227, OSC coil (similar with two windings), UY227.

Tubes are out but I think I've got two of them somewhere. I don't think my '30 year old' tube tester which is also "somewhere" has a that kind of socket on it!

Underneath there are a number of metal cased capacitors, three brown plastic Aerovox USA capacitors and three carbon composition resistors. Values not visible except on one Aerovox, .005; which appears to be an 'output' of some sort. Wired with fabric wire and uses quite a lot of riveted construction.

Along the back of the paxolin sub chassis are five unmarked insulated screw terminals. Am assuming they will be; Antenna, Common negative (chassis), Heater, B+, Output. Tracing required. Presumably the output was in, say, the broadcast band to a regular receiver. With separately adjustable oscillator and tuning I suppose you could pick different output frequencies and/or use the regular receiver for fine tuning! As per a Q5er.

Apart from the missing top cover from a components point of view it appears to be complete except that someone had drilled out the rivets of what was probably a transformer (or choke) mounted mid front below the chassis, you can also see four mounting tag marks and remains of two rivets! But cant see any missing wiring other than the potentiometer mentioned above.

As I prepare to trace out the circuit of this interesting item, I think I've got tube pin connections somewhere and possibly get it going, if possible, on the one set of coils in it (13 Mhz to 6.6 Mhz. which is a 2:1 ratio btw) can anyone offer advice or suggest any source for information. Any help would be appreciated.

Many thanks for reading.

Terry S. Newfoundland. About six to eight miles from where Marconi in 1901 received the first trans. Atlantic wireless message from Cornwall in England.

>Is there a source for it somewhere?

The other suggestions are fine. In addition, I bought and use some heavy thread that's used to sew leather. The stuff is the right diameter and is waxed. The wax, rather than being slick, helps grip the part around which its wound. It works just fine. I got quite a large spool of it for less than $2.

I have two RA-6217 radios, working, but both could use realignment. $450 ea.

Also two complete RA-6778 radios which I got new from Racal about a dozen years ago, but not working, then or now. Both power up, but have problems. Near new condition. With all filters and modules. No power cord either. Manuals are available from a MD source at $75 ea . Sold as-is, but complete.

Rare rare rare....RA-153 receiver (dual RA-17 radios with one tuning mechanism). Working. See Fred Osterman's book. Pickup only on Long Island, NY at $650.
Shipping extra on all.

E-Mail only please

ooops...need to clarify prices:

price on RA6778
Should be $650 ea (the manuals are available from another source at $75 ea)

RA-6217 at $450 ea
also RA-6778 and RA-153 at $650 ea

Clear? I hope so

Anybody using or restoring one of these old Lafayette Radio HA-460 6 meter AM boxes?

Any hints, problems or fixes? Got a manual copy from the net, but haven't started the restoration yet.
Need wiring diagram of the AC power cord too...

Chuck, KM4AO

Message-ID: <39a3bb7f.11432222@news-server>
Source record: 62294
Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.audio.tubes,rec.radio.amateur.boatanchors

For sale:

LOAD RESISTORS for testing audio amplifiers:

Dale gold series....

8 ohm 50 watts for $9.00 each plus shipping

8 ohms 100 watts for $16.00 each plus shipping

16 ohms 100 watts for $16.00 each plus shipping

4 ohm 50 watts for $9.00 each plus shipping

2 ohms 100 watts for $16.00 each plus shipping

I can supply you with 200 Watt loads - either 4 ohm, 8 ohm, or
16 ohm resistive loads as follows:
Each set-up would consist of FOUR 50 Watt resistors wired for the
correct load impedence.

These are brand new DALE Gold Series
(the best precision load resistors you can get!)
and each set-up rated for 200 Watts sell for $30.00 plus shipping.

I can also supply these as 100 watt loads in either 8 ohms
or 16 ohms, for $16.00 each, plus shipping

923. Marine VHF Antenna Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-23 00:00:00 UTC
From: Ted Ling <lingted@Hotmail.com>
Message-ID: <u1Po5.65833$dC1.91617@dfw-read.news.verio.net>
Source record: 62295

A friend and I are installing a VHF Marine radio in his 1989 5th wheel.
He's placed a Shakespeare 5206-C antenna on a 15' pole. The camper is
already wired for cable TV, which he would like to use for this application.
. I know some of the cable run is RG-59, but am not sure if all of it is.
The antenna came with RG-8 or RG-58 (the smaller diameter of the two). Can
we mix and match these cables? Will the RG-59
work OK for these marine frequencies? Generally speaking, is cable TV cable
appropriate?
For this application? What cables (types) are appropriate to use
in this application? If this is an inappropriate news group to ask theses
questions, please
suggest another. Thanks.

924. DRAKE R8 - Communications Radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-23 00:00:00 UTC
From: Reed Park <reedpark@nbnet.nb.ca>
Message-ID: <39A3BE79.36B704D@nbnet.nb.ca>
Source record: 62296

Just wondering what a Drake R8 would go for. Not much of a Boat Anchor
as it is solid state. I was asked to "make an offer" and don't want to over
pay.
Comes with service manual and owners manual.

This rig has seen little or no use prior to my ownership of it. I only
brought it up once with variac for a test run on 20 meters which it passed
in all modes. Original Carton, Manual and a rig so clean it looks and
smells like the box was just opened.
Hammarlund collectors, take a look.

Subject: FA: Original Meissner 1943 How To Build Manual

At E-Bay
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=412629700

A real catch for the collector. 168 pages of projects for the homebrewer
including the famous Signal Shifter.
Loaded with theory, projects, servicing and more. Schematics and
pictorials galore.

Subject: Need Kenwood TS-940 cable

The Kenwood TS-940 uses a peculiar coax pin connector on the RF cables
between boards. Anyone have one of these they could dispose of ? Just need a
piece I can cut in half and put BNC connectors on.
I know it's not quite a "real" BA but it is heavy and getting old.....
Thanks

From: Terry Brown <terry.brown6@att.net>
Subject: RCA AR88/CR88 Help

I just received what I think is a CR88 but I can't find anything inside or outside indicating what model it is. Also, the round red and silver RCA emblem is missing from the front panel (anyone know of one or a reproduction?). There is no case...the front panel is black wrinkle finish. It has an S meter and a small control in the lower right front panel that is a crystal calibrator.
Does anyone know how to tell which model this is? Are there any AR88/CR88 collectors or fans I could visit with to get some help? I downloaded the CR88 manual from BAMA but mine doesn't match it. Anyone have a manual covering the models with calibrators?
It looks like I may need the power/mode switch. Anyone have one from a junker or know who I might contact? Thanks and 73.

From: ljl160@aol.com (LJL160)
Subject: Antique tubes nib or tested good

I and Dick K1RAW have been consigned by a recent estate 150 to 200 antique
tubes. All either new or tested good. Prices checked out of recent catalogues
about $3000 or so. Would like to sell as a lot if possible at a very
reasonable price. A few examples are Deforest 802, CRC808, Z-51, Western
216A,Natinal NX280, Silvertone 80, RCA10Y C335, c235,RCA UY227B,Zenith Z27B,
Hytron 2A3,803, USN801,Simplex 35, Raytheon

CX3013B29,884,1D21,3c24,717A,HY615,CRC955,CRC956,TZ20,3D6,829Bs,T40,T55,cr
c2050,CX371B,EX210,1v2,CL45B,2K26,59,eveready er281,6l6s,1625,807,6b4g,etc etc.
Too many too list. Ill try making up the full count and complete list by
Monday or Tuesday. Please e mail me if interested. Pickup would be preferred
but we could ship them as well. Thanks

Subject: Comparing Receivers

It is not too difficult to design a receiver with a noise floor that is well
below man-made and atmospheric noise. Therefore, you may wish to
consider selectivity to determine your choice.
Al

Subject: FS: APS-104 radar modulator

FS: mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. Email or call 334-347-5281 day/eve/wknd.

From: "N7GSU" <robin@n7gsu.com>
Subject: FS: Print your own high-quality QSLs!

N7GSU QSLs will design custom, high-quality, color QSLs for a flat $30. The designs are sent to you in PDF format and maybe printed as needed using your color printer and readily available card stock.

If you are a member of FISTS, FISTS Northwest, FISTS New England CW Club or QCWA - I have in stock designs that can be customized with your info for only $15.

If you are planning a special event or DXpedition, you owe it to yourself to check into having me design that special, custom QSL for you. If your club doesn't have a logo, needs a club QSL design for it's members, or wants to sponsor an operating award; let me design these for you! Custom QSLs are a flat $30, logo designs and custom award certificates average $30-$50. This includes designs incorporating color photos!

Payment can be accepted by Visa or Mastercard, or by email via PayPal. I also accept checks and MO's. Checkout the website at:

http://www.n7gsu.com and see what I can do. The site is still under construction, but new content is being added daily. If you have an idea you'd like turned into a custom QSL, logo or award certificate... give me a try!

From: radio@udel.edu
Subject: Help with HQ-170 needed

I just got an HQ-170 which lit up, received dimly for a day, now hears
the calibrator
and some noise, and that's about it. The voltage regulator glows
differently when switch goes to receive/send/calibrate.

I have zero experience with such critters and am looking for someone to
walk me through what I need to do to get it in working shape.

Thanks and 73

Bob N9GG

Date: Fri, 18 Aug 2000 07:02:55 -0400
From: "D. S. Platt" <jeepp@erols.com>
Subject: Help with HQ-170 needed

I just finished going through 2 170's (one was an "A"). The LO appears to
me to be a real culprit in the ones I've been associated with. A scope is
almost a requirement to check if the first and second conversion
oscillators are OK. I'm told that there are also 2 of the IF cans that go
out with some regularity. When I was selling off one of my junkers, I got
quite a few responses to one or two of the cans. One of ones I just fixed
had a bad conversion oscillator crystal. Luckily I had one, on hand.
To reiterate, if the B+ voltages are OK (the difference in the glow of the
VR tube is probably OK. Mine does that when going to standby. Reason:
Load on circuit drops, voltage across VR tube changes.), proceed and ensure
that the oscillators are functioning. On 160 and 80, only the 6C4 is
oscillating (diff req for each band, of course). Above 80 meters, the
second oscillator portion of V3 comes into play. Its a fixed freq of 2.580
MHz. After that, it gets down to injecting a signal at Pin 1 of V4 (455
kHz) and checking the IF and audio chain. Then back to the antenna with an
appropriate input signal for band/frequency. Another set of hints can be
found at the BAMA website.
ftp:bama.sbc.edu/downloads/hammarlu/hq170txt/hq170.txt (I think that's
correct), or just search on bama+hammarlund. Good luck with the project.

By ALL means go to the Techniska Museet, there is a communications museum there that is totally DYNOMITE!!! It is wonderful. Four sections, one each for telephone, telegraph, radio and TV. Huge amounts of beautiful old equipment and a fully operating telephone relay switch. It's great to hear the clicks and burps when you dial the phone. They also have an operating ham station, SK0TM. Plan to spend at least half a day there. (I was just there last month and regretted the shortness of time I had allocated).

Subject: WTB: Mill typewriter (All capitals)

Strictly speaking I guess this really is not the place for a posting for a typewriter; but having tried typewriter newsgroups without success I figured it worth a shot.

I am looking to buy a MILL TYPEWRITER. Such machined were manufactured for use by telegraphers and had only a single case (all capitals) of letters. Typically there was no SHIFT key and many times the typewriter had sprockets surrounding the platen.

If you know of one or have one I would appreciate hearing from you.

Hello Johnson fans,
I will be listing an unused factory wired Johnson Ranger 1 on Ebay in mid October. Unit was a Armed Forces spare back-up unit (NEVER USED) for 20 years Unit was surplused in mid 70's and then stored in a basement of a wannabe ham.
I will be showing pictures of the opening of the case showing the original packing, etc.
This one is for real, it hasn't seen volts since it left Waseca.
I will post an announcement once only, when the listing starts.
Good Luck

You should use the RG-58 all the way. Unlicensed use of a marine radio
is not appropriate for a trailer unless the trailer is floating on a
barge. If you want to talk from the campsite to a boat, you need to
check with the FCC to see what kind of license you need or use a
different service.

A pulse triode used in radar modulators and similar applications. Used to switch a very high voltage (20-30 kV) and moderate currents (tens of amps) at a low duty cycle. Used to drive a magnetron.

These kind of tubes are often poor performers as modern ham amp tubes, as they are usually quite non-linear. They might be better suited to class C amplifiers. I have heard that this type of tube is very good for a tesla coil driver, if you are into that sorta stuff.

I have a pair of ITT F-7030 pulse radar tubes (clipper diodes) sitting on a shelf in my shack. With the heavy finned copper anode radiators, they make great bookends!

73,
Bob Weiss N2IXK

G'day, Ive just purchased a complete Collins KWM-2 station which came with the 30-L-1 amplifier. Everything is complete and working but the amp came minus tubes. The only place in Australia Ive been able to find that stocks 811A tubes tells me they (the ones they stock) are no good as they MUST be mounted vertically. Is there a difference?

Thanks
Ross

Source record: 62316

Maybe so, maybe not. The original design specs for 811As provides for vertical mounting base down, or horizontal with pins 1 and 4 in a vertical plane (RCA TT-5). If the manufacturer built to those same specs, then the 30L1 is designed for the latter case. I think Svetlana meets most RCA specs, and I know of several 30L1s using Svetlana tubes. What brand is your source selling? I have been told that the 572B is a rugged replacement for the 811A, and is another type to consider.

Here's what Svetlana says about THEIR 811A's:

"...The internal structure is well supported and is aligned with respect to the base pins to avoid internal shorts in equipment designed for horizontal mounting of the original RCA 811A...."

Source record: 62431

I was unpacking a bunch of Ham Radio stuff from an estate sale and found 2 of the following tubes. JAN 7C23 ITT. They are very big, metal heat sink the size of a coke can. They say PULLED GOOD on them, but have no idea what they go to, or if they even have a value??? Not your typical and familiar amateur linear tubes... Robert WA6PHN

962. RCA AR88/CR88 Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-23 03:39:24 UTC
From: Terry Brown <terry.brown6@att.net>
Message-ID: <39A362B3.F4C6A61E@att.net>
Source record: 62432

I just received what I think is a CR88 but I can't find anything inside or outside indicating what model it is. Also, the round red and silver RCA emblem is missing from the front panel (anyone know of one or a reproduction?). There is no case...the front panel is black wrinkle finish. It has an S meter and a small control in the lower right front panel that is a crystal calibrator.
Does anyone know how to tell which model this is? Are there any AR88/CR88 collectors or fans I could visit with to get some help? I downloaded the CR88 manual from BAMA but mine doesn't match it. Anyone have a manual covering the models with calibrators?
It looks like I may need the power/mode switch. Anyone have one from a junker or know who I might contact? Thanks and 73.

Terry (KA5IHV)

963. PANASONIC RF-9000 maual, Do you own one???

Subject: Collins Tube Help

G'day, Ive just purchased a complete Collins KWM-2 station which came with the 30-L-1 amplifier. Everything is complete and working but the amp came minus tubes. The only place in Australia Ive been able to find that stocks 811A tubes tells me they (the ones they stock) are no good as they MUST be mounted vertically. Is there a difference?

Thanks
Ross

From: w4pqwhs@aol.com (W4pqw HS)
Subject: Collins Tube Help

Hello Ross, you will enjoy the Collins equipment .. on the 30L1 tubes ,you will need to get tubes certified to work horizontaly, thats because the internal elements supports are not strong enough to keep the elements from sagging and shorting . I would be looking for military Jan 811 tubes ,they were designed to work in aircraft equipment and all sorts of rough service.. good luck 73

From: "Crazy George" <munschNO@attglobal.net.SPAM>
Subject: Collins Tube Help

Maybe so, maybe not. The original design specs for 811As provides for vertical mounting base down, or horizontal with pins 1 and 4 in a vertical plane (RCA TT-5). If the manufacturer built to those same specs, then the 30L1 is designed for the latter case. I think Svetlana meets most RCA specs, and I know of several 30L1s using Svetlana tubes. What brand is your source selling? I have been told that the 572B is a rugged replacement for the 811A, and is another type to consider.

Subject: FA : in october -still new ranger1 factory wired

Hello Johnson fans,
I will be listing an unused factory wired Johnson Ranger 1 on Ebay in mid October. Unit was a Armed Forces spare back-up unit (NEVER USED) for 20 years Unit was surplused in mid 70's and then stored in a basement of a wannabe ham.
I will be showing pictures of the opening of the case showing the original packing, etc.
This one is for real, it hasn't seen volts since it left Waseca.
I will post an announcement once only, when the listing starts.
Good Luck

From: "Ted Ling" <lingted@Hotmail.com>
Subject: Marine VHF Antenna Question

A friend and I are installing a VHF Marine radio in his 1989 5th wheel.
He's placed a Shakespeare 5206-C antenna on a 15' pole. The camper is
already wired for cable TV, which he would like to use for this application.
. I know some of the cable run is RG-59, but am not sure if all of it is.
The antenna came with RG-8 or RG-58 (the smaller diameter of the two). Can
we mix and match these cables? Will the RG-59
work OK for these marine frequencies? Generally speaking, is cable TV cable
appropriate?
For this application? What cables (types) are appropriate to use
in this application? If this is an inappropriate news group to ask theses
questions, please
suggest another. Thanks.

You should use the RG-58 all the way. Unlicensed use of a marine radio
is not appropriate for a trailer unless the trailer is floating on a
barge. If you want to talk from the campsite to a boat, you need to
check with the FCC to see what kind of license you need or use a
different service.

From: Bob Weiss <bweiss@carroll.com>
Subject: WHAT ARE THESE TUBES???????

A pulse triode used in radar modulators and similar applications. Used to
switch a very high voltage (20-30 kV) and moderate currents (tens of amps)
at a low duty cycle. Used to drive a magnetron.

These kind of tubes are often poor performers as modern ham amp tubes, as
they are usually quite non-linear. They might be better suited to class C

amplifiers. I have heard that this type of tube is very good for a tesla
coil driver, if you are into that sorta stuff.

I have a pair of ITT F-7030 pulse radar tubes (clipper diodes) sitting on a
shelf in my shack. With the heavy finned copper anode radiators, they make
great bookends!

73,
Bob Weiss N2IXK

970. Vintage-Radio e-mail Reflector

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-24 00:00:00 UTC
From: Mike <abc@123.net>
Message-ID: <8o38kc$1c0r$1@vallen.koba.ee>
Source record: 62327

This list will prove beneficial to anyone who is interested in the collection,
restoration, and operation of vintage radio equipment. While this list will deal mainly with American-made amateur radio receivers and transmitters, other makes are welcome so long as they fit the category of "vintage". To qualify for vintage status a set must be 25 years old and preferably contain some vacuum tubes. This category can include military, home broadcast sets, commercial equipment and homebrew equipment. Any homebrew equipment using vacuum tubes and operating CW or AM will be considered "vintage" equipment no matter what the age. Accessories such as keys, antenna tuners, watt meters, test equipment, etc. is also considered a part of the Vintage hobby and will be welcome if it is at least 25 years old.

I sincerely hope that you will join our group of vintage enthusiasts. With your help we can make this a great List.

Please do NOT subscribe using a forwarding e-mail account (e.g. qsl.net; arrl.net). Please use your actual, non-forwarding address only.

Subject: Antique tubes nib or tested good

I and Dick K1RAW have been consigned by a recent estate 150 to 200 antique
tubes. All either new or tested good. Prices checked out of recent catalogues
about $3000 or so. Would like to sell as a lot if possible at a very
reasonable price. A few examples are Deforest 802, CRC808, Z-51, Western
216A,Natinal NX280, Silvertone 80, RCA10Y C335, c235,RCA UY227B,Zenith Z27B,
Hytron 2A3,803, USN801,Simplex 35, Raytheon
RK20A,42,35-51,15R,UX224,ux245Cunningham
CX3013B29,884,1D21,3c24,717A,HY615,CRC955,CRC956,TZ20,3D6,829Bs,T40,T55,cr
c2050,CX371B,EX210,1v2,CL45B,2K26,59,eveready er281,6l6s,1625,807,6b4g,etc etc.
Too many too list. Ill try making up the full count and complete list by
Monday or Tuesday. Please e mail me if interested. Pickup would be preferred
but we could ship them as well. Thanks

Subject: e-bay prices

Funny you should say that, Because I trade heavily on the various auction
boards, but almost never in Ham Gear. I have seen Heathkit stuff go for 5
times what it should, and I LIKE the stuff! I was seriously thinking about
haunting garage sales, fleas markets and thrift stores buying it up, except
it pains me to see it so darn expensive on resale. Did anyone see what the
unassembled HW9 with accesories went for on ENAY recently? You could, on the
same day, have bought a 1200 watt amp, an HF rig, and an all mode 2M rig all
together for the price of that HW9. WHEW! I sold an HW8 at the TRW flea
market 4 years ago for $25 bucks to a kid and felt bad about it.

From: "N7GSU"
Subject: FS: Print your own high-quality QSLs!

N7GSU QSLs will design custom, high-quality, color QSLs for a flat $30. The designs are sent to you in PDF format and maybe printed as needed using your color printer and readily available card stock.

If you are a member of FISTS, FISTS Northwest, FISTS New England CW Club or QCWA - I have in stock designs that can be customized with your info for only $15.

If you are planning a special event or DXpedition, you owe it to yourself to check into having me design that special, custom QSL for you. If your club doesn't have a logo, needs a club QSL design for it's members, or wants to sponsor an operating award; let me design these for you! Custom QSLs are a flat $30, logo designs and custom award certificates average $30-$50. This includes designs incorporating color photos!

Payment can be accepted by Visa or Mastercard, or by email via PayPal. I also accept checks and MO's. Checkout the website at:

http://www.n7gsu.com and see what I can do. The site is still under construction, but new content is being added daily. If you have an idea

you'd like turned into a custom QSL, logo or award certificate... give me a try!

73,

Robin Faulkner, N7GSU

Subject: Help with HQ-170 needed

I just got an HQ-170 which lit up, received dimly for a day, now hears
the calibrator
and some noise, and that's about it. The voltage regulator glows
differently when switch goes to receive/send/calibrate.

I have zero experience with such critters and am looking for someone to
walk me through what I need to do to get it in working shape.

Thanks and 73

From: Jan Ditzian
Subject: IC-730 question and parts request

I just purchased an Icom IC-730, the same radio that I had about 15 years ago. I do not know whether it qualifies as a boat anchor, but I have some technical questions and I would like some parts, if they are not expensive.

This radio was supposedly aligned at the factory recently, and my faith in Icom is so great that I immediately checked it out (first day I had it), and the alignment was off in several ways.

I realigned the frequency readout using a digital-mode receive program and WWV, aligning the transmitted signal with the correct spot on the program's frequency display. This suddenly put lots of qsos at frequencies that ended with 0 kHz, so I guess that now I agree with most folks about the frequency we are on.

The two sidebands sound quite different on noise, with the IF shift centered. The lower sideband position is far higher in pitch than the upper sideband. I can move the IF Shift control to a different position such that they sound the same, but this is almost halfway to one side. I strongly suspect that there is a trimmer component (resistor, capacitor, or coil) that can be adjusted to bring the balance point back to the middle of the IF Shift control. Can someone tell me how to find this trimmer?

I would also like to replace the screws used to hold this thing together, both the internal flathead screws and the external roundhead black screws. Is there some place that sells this size hardware at a reasonable price? I do not even need black screws, they could be plain steel, nickel, or whatever. I just do

not want to have to use my impact screwdriver again to remove these screws that are almost completely stripped where the Phillips screwdriver inserts.

Thank you for any assistance.

> some of which might be used in Drake gear?
>
> 8417, 6KV6A.

As just a visitor to this list I imagine the following links are pretty much old news, but I'll mention them in the off chance that they aren't that well known after all:

"The Military Commo Equipment List," at URL

"Tube Database Search," at URL

"Nostalgia Air Tube Substitution & Characteristics Guide," at URL

The first URL, above, includes links to the latter two; all three are currently valid.

Referring to your inquiry, NJ7P's excellent online lookup feature (the second link above) shows entries for the 6KV6 and 6KV6A. The 6KV6 returns the following, along with the usual data:

> Prefered Substitutes 6JG6
> Substitutes. . . . . None

From: "Phil T. (VA3UX)"
Subject: Tektronix selling price survey updated

My selling price survey of Tek stuff on eBay has been updated. The survey
now includes 1157 different instruments (scopes, probes, plug-ins etc), and
there are over 12,750 prices data entries gathered during the past 12+ months.
Some HP, GR and Wavetek stuff too. The number of vintage GR listings has increased too.

My site is located at :

http://www.vaxxine.com/phil/

Comments/suggestions on the format greatly appreciated.

By ALL means go to the Techniska Museet, there is a communications
museum there that is totally DYNOMITE!!! It is wonderful. Four
sections, one each for telephone, telegraph, radio and TV. Huge amounts
of beautiful old equipment and a fully operating telephone relay
switch. It's great to hear the clicks and burps when you dial the
phone. They also have an operating ham station, SK0TM. Plan to spend
at least half a day there. (I was just there last month and regretted
the shortness of time I had allocated).
